ANNOUNCING A NEW JOURNAL

K-THEORY

D. Reidel Publishing Company are pleased to announce that in the Spring of 1987 they will commence publication of *K-Theory*, an Interdisciplinary Journal for the Development, Application, and Influence of K-Theory in the Mathematical Sciences.

The Managing Editor is Anthony Bak, Department of Mathematics, University of Bielefeld, F.R.G.

K-Theory is a relatively new research area which overlaps many others and has taken on an interdisciplinary role in mathematics. Areas it touches upon include linear algebra, ring theory, number theory, algebraic geometry, algebraic topology, differential geometry, functional analysis, operator algebras, and dynamical systems. It is also finding applications in applied subjects such as systems control, econometrics, and quantum physics.

The journal *K-Theory* will provide a forum for the presentation, discussion, and critical evaluation of significant, as well as outstanding, mathematical advances in which K-Theory plays a part. It will be open to all mathematical disciplines and it is expected that this will bring together work having close conceptual and methodological relationships which, hitherto, have been scattered in the literature.

K-Theory will also publish survey articles describing the role and influence of K-Theory in mathematics.

Enquiries concerning submission of papers, Information for Authors, subscriptions, sample copies, etc., should be sent to D. Reidel Publishing Company, The Journals Department, P.O. Box 17, 3300 AA Dordrecht, Holland.
