Editorial announcement

As from this year the journal will have twelve issues per annum, that is, three volumes of four issues each. To handle this increased publication volume and to accommodate possible future growth, a group of four Executive Associate Editors have been appointed, namely:
A. Friedman, Dept. Mathematics, U. Minnesota, Minneapolis, NM 55455, U.S.A.; H. Neunzert, Fachb. Mathematik, U. Kaiserslautern, 67653 Kaiserslautern, Germany; C. Pozrikidis, Dept. Appl. Mech. Eng. Sci., U. California at San Diego, La Jolla, CA 92093, U.S.A.; S.K. Wilson, Dept. Mathematics, U. Strathclyde, Glasgow G1 1XH, Scotland, U.K. Each of these colleagues will conduct the refereeing process for part of the volume of papers submitted to us, much as I have been doing that for all our papers up to now since taking office.

We do hope that the increased volume will help the journal to assume an even stronger position in the general area of applied, engineering and industrial mathematics. The new Board of Executive Associate Editors will certainly be instrumental in widening and enriching the journal's scope and maintaining its high standards of acceptance.

H.K. Kuiken,
Editor-in-Chief
