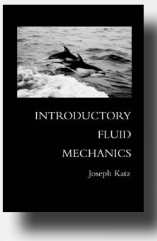
CAMBRIDGE

Fantastic Titles from Cambridge University Press!

Introductory Fluid Mechanics



JOSEPH KATZ

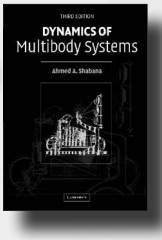
This book is designed as a first course on this subject, introducing the principles of fluid mechanics. At the same time, it provides sufficient analytical background for future, more specific courses in this field. Topics covered include flow in pipes and forces on objects such as automobiles and airplanes, using both analytical- and experimental-based approaches. It is expected that the reader will not only understand the basic principles but have the ability to use his or her skills for engineering design.

$135.00: Hb: 978-0-521-19245-3: 456 pp.

Now in Paperback!

Dynamics of Multibody Systems

3rd Edition!



AHMED A. SHABANA

Contents:

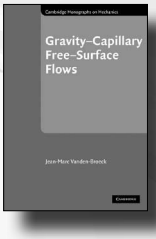
1. Introduction; 2. Reference kinematics; 3. Analytical techniques; 4. Mechanics of deformable bodies; 5. Floating frame of reference formulation; 6. Finite element formulation; 7. Large deformation problem; Appendix. Linear algebra; References; Index.

$65.00: Pb: 978-0-521-15422-2: 384 pp.

The Geometrical Language of Continuum Mechanics

MARCELO EPSTEIN

$125.00: Hb: 978-0-521-19855-4: 328 pp.



Gravity-Capillary Free-Surface Flows

JEAN-MARC VANDEN-BROECK

Cambridge Monographs on Mechanics

Contents:

Preface; 1. Introduction; 2. Basic concepts; 3. Free surface flows which intersect walls; 4. Linear free surface flows generated by moving disturbances; 5. Nonlinear waves (asymptotic solutions); 6. Numerical computations of nonlinear water waves; 7. Nonlinear free surface flows generated by moving disturbances; 8. Free surface flows with waves and intersections with rigid walls; 9. Waves with constant vorticity; 10. Three-dimensional free surface flows; 11. Time dependent free surface flows; Epilogue; References; Index.

$110.00: Hb: 978-0-521-81190-3: 336 pp.

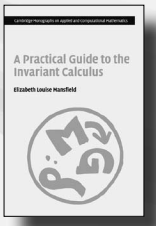
Acta Numerica 2010

19th Edition!

EDITED BY ARIEH ISERLES

Acta Numerica

$135.00: Hb: 978-0-521-19284-2: 604 pp.



A Practical Guide to the Invariant Calculus

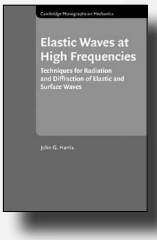
ELIZABETH LOUISE MANSFIELD

Cambridge Monographs on Applied and Computational Mathematics

Contents:

Preface; Introduction to invariant and equivariant problems; 1. Actions galore; 2. Calculus on Lie groups; 3. From Lie group to Lie algebra; 4. Moving frames; 5. On syzygies and curvature matrices; 6. Invariant ordinary differential equations; 7. Variational problems with symmetry; References; Index.

$75.00: Hb: 978-0-521-85701-7: 260 pp.



Elastic Waves at High Frequencies

Techniques for Radiation and Diffraction of Elastic and Surface Waves

JOHN G. HARRIS

Cambridge Monographs on Mechanics

$85.00: Hb: 978-0-521-87530-1: 185 pp.

Prices subject to change.

ISSN 0022-1120

Journal of Fluid Mechanics

25 August 2010

1 Wall effects on a rotating sphere
Q. Liu & A. Prosperetti

22 Impact of a falling jet
P. Christodoulides & F. Dias

36 A variational approach to Boussinesq modelling of fully nonlinear water waves
G. Klopman, B. van Groesen & M. W. Dingemans

64 Self-propulsion and dispersion of reactive colloids due to entropic anisotropy
H.-H. Wei & J.-S. Jan

89 Drag and lift forces on a spherical particle moving on a wall in a shear flow at finite *Re*
H. Lee & S. Balachandar

126 Transverse instability of surface solitary waves. Part 2. Numerical linear stability analysis
T. Kataoka

171 The bottleneck effect and the Kolmogorov constant in isotropic turbulence
D. A. Donzis & K. R. Sreenivasan

189 Polymer-laden homogeneous shear-driven turbulent flow: a model for polymer drag reduction
A. Robert, T. Vaithianathan, L. R. Collins & J. G. Brasseur

227 Negatively buoyant projectiles – from weak fountains to heavy vortices
O. J. Myrtroeen & G. R. Hunt

238 Two-dimensional potential flow solutions with separation
A. Verhoff

265 The rise and fall of turbulent fountains: a new model for improved quantitative predictions
G. Carazzo, E. Kaminski & S. Tait

285 Theoretical analysis of ultra-lean premixed flames in porous inert media
F. M. Pereira, A. A. M. Oliveira & F. F. Fachini

308 New wave generation
M. J. Mercier, D. Martinand, M. Mathur, L. Gostiaux, T. Peacock & T. Dauxois

335 Turbulent boundary layers and channels at moderate Reynolds numbers
J. Jiménez, S. Hoyas, M. P. Simens & Y. Mizuno

S 361 Direct numerical simulation of transonic shock/boundary layer interaction under conditions of incipient separation
S. Pirozzoli, M. Bernardini & F. Grasso

S 394 Reynolds stress and eddy viscosity in direct numerical simulations of sheared two-dimensional turbulence
P. F. Cummins & G. Holloway

413 A new nonlinear vortex state in square-duct flow
S. Okino, M. Nagata, H. Wedin & A. Bottaro

430 Steady streaming confined between three-dimensional wavy surfaces
R. Guibert, F. Plouraboué & A. Bergeon

456 Passive trapped modes in the water-wave problem for a floating structure
C. J. Fitzgerald & P. McIver

478 Moist multi-scale models for the hurricane embryo
A. J. Majda, Y. Xing & M. Mohammadian

502 Decay of magnetohydrodynamic turbulence at low magnetic Reynolds number
P. Burattini, O. Zikanov & B. Knaepen
