ASME 6TH INTERNATIONAL SYMPOSIUM

FSI, AE & FIV + N

FLUID-STRUCTURE INTERACTIONS, AEROELASTICITY,

FLOW-INDUCED VIBRATION & NOISE

at the PVP-Division Summer Meeting

23–27 July 2006, Vancouver, BC, Canada

This is the sequel to the successful 1984, 1988, 1992, 1997 and 2002 Symposia, some co-sponsored by JSME, IMechE, CSME, IAHR and AFM. All have been sponsored jointly by the ASME Divisions of Applied Mechanics, Fluids Engineering, Heat Transfer, Noise Control & Acoustics, Nuclear Engineering, and Pressure Vessels & Piping; the last two also by the Aerospace Division.

Papers in the general areas of fluid–structure and fluid–sound interactions, aeroelasticity, hydroelasticity, flow excitation and flow–induced vibrations and noise, and unsteady fluid dynamics related to FSI are invited — both fundamental papers, with no particular applications, and papers related to or inspired by specific systems in aerospace, mechanical and naval engineering. Theoretical, experimental and computational papers are equally welcome. Conference Proceedings will be published.

Interested authors are invited to submit a 200–400 word abstract to
