

Technical and Design Notes

The *Journal of Fluorescence* now publishes a new class of articles called “Technical and Design Notes.” These new additions to the journal must satisfy the following criteria.

- The article should present technical details of fluorescence-based procedures (standardization or analytical) or stationary or time-resolved instrumentation, design considerations, or substantial developments in software development, such as in analysis.
 - Articles describing the synthesis and characterization of new fluorophores, particularly those displaying unique sensitivities or optical properties, and advances in labeling procedures are welcome.
 - The article should be of wide interest to the fluorescence community and must not be published or under consideration elsewhere.
- The article must fit within the general guidelines and scope of the *Journal of Fluorescence*.
 - The article should be typically fewer than 1500 words, with 5 or fewer figures, 2 or fewer tables, and typically 20 or fewer references.
 - The article should have the general structure; Title, Authors, Affiliations, Abstract (≤ 150 words), Key Words (≤ 5), Main Text, References. See the March 2002 issue, pp. 113–117 for an example.

Technical and Design Notes are peer-reviewed, receiving only one review designated by the coordinating editorial board member, the founding editor, or editor. Authors are encouraged to contact the editor if unsure about the suitability of potential manuscripts.
