

David A. Crown,¹ D. Crim.

Dates of Introduction of Specific Photocopy Machines

REFERENCE: Crown, D. A., "Dates of Introduction of Specific Photocopy Machines," *Journal of Forensic Sciences*, JFSCA, Vol. 34, No. 1, Jan. 1989, pp. 110-141.

ABSTRACT: The dates of introduction (DOI) of 1504 known photocopy machines/models using diffusion transfer, stabilization, thermal transfer, dye transfer, dual spectrum, indirect electrostatic, and direct electrostatic copy processes are detailed, when known. The DOIs are derived from published listings, yearly compilations of machines available, and publicity releases indicating relative availability.

KEYWORDS: questioned documents, photocopiers

Since the introduction of the first photocopy machines 3 decades ago, there have been at least 1504 known photocopy models/machines manufactured using the diffusion transfer, stabilization, thermal transfer, dye transfer, dual spectrum, indirect electrostatic, and direct electrostatic copy processes. The various types of diazo process blueprint copiers are not included in this survey as they are normally of limited interest to the questioned document examiner.

Knowledge of the date of introduction (DOI) of specific photocopy machines is essential in the examination of "phantom original" documents in which the original of a document can never be found, but the proponent claims to have a photocopy of the document [1]. DOIs of the paper watermark, typewriter, photocopy machine, and so forth involved can provide proof that the materials or machines or both claimed to have been used were not available on the date stated.

Photocopy machines have a date when the model was introduced or made available for purchase by the public and the date the machine was acquired by a specific group, person, or office. There are time periods during their usage when trash marks on the glass plate serve to identify specific time periods of usage.

Establishing the DOI of the 1504 known photocopy machines can be derived from several distinct sources. Kelly has given a number of DOIs of machines available before 1983 [2]. The Minnella Enterprises, Inc. [3-9] in their biyearly compilations of available photocopy machines issued as *Minnella's Pocket Guide to Copiers, Low and Middle Volume* list the DOIs of all machines covered. These two sources, however, do not cover the DOIs of all the machines produced in the last three decades.

A second source of data on DOIs are the yearly compilations of available photocopy machines published in articles in magazines such as *Office Management*, *The Office*, *Office Products Analyst*, *Today's Office*, *Office Systems '85*, and so forth. Listing in any of these

Received for publication 26 Feb. 1988; accepted for publication 20 April 1988.

¹Examiner of questioned documents, Fairfax, VA.

annual surveys indicates that a specific machine was known or available during the time period the article was being produced.

Lastly, the trade publications listed above all have a "New Products" section that contains short publicity releases and product photographs submitted by the manufacturers/distributors of the photocopier machines to the magazines. The appearance of a release indicates a relative availability of a specific machine.

Using the Kelly-Minnella DOIs, the yearly summaries, and the publicity releases in combination, one gains a good idea of the date of introduction or availability or both of a specific model of a photocopier machine. Note in Table 1 that adequate data is available for the more recent machines, but that data on the older machines is sparse and in some cases not available.

In the following table, all known models are listed even though there are no DOIs available. Also note that sometimes all the data seem to agree on a narrow time band for availability, and at other times, there is a wide disparity in the data provided. The author has compiled the data from the sources listed, but cannot indicate, in cases of disagreement, which is the preferred DOI. In all cases, where the DOI is critical and there is divergence in the listed data, recourse should be had to the specific manufacturer of the photocopier machine. If the manufacturer is no longer in business, the references should be queried as to the source of their information.

It is known that photocopier machines may be marketed under several different brand-names. The data presented covers only the name a machine was marketed under, not the name of the actual manufacturer, if different.

The abbreviations used are as follows: Diff. (diffusion transfer process), Stab. (stabilization process), Dual (Dual Spectrum process), Press. (pressure transfer process), Dye trans. (dye transfer process), CP (coated paper-direct electrostatic process), PP (plain paper-indirect electrostatic process), DT (dry toner), and LT (liquid toner).
