

BOOK REVIEW

Allen M. Jones,¹ M.D.

A Review of Pathology Annual 1990: Part 1

REFERENCE: Rosen, P. P. and Feehner, R. H., Ed., *Pathology Annual 1990: Part 1*, Appleton and Lange, East Norwalk, CT. 1990, 335 pp.

This volume is an excellent continuation of the *Pathology Annual* series, which has always provided up-to-date valuable pathology information hard to find elsewhere.

The twelve chapters are written by noted experts. While all of the chapters are of primary interest to a surgical pathologist, the chapters on central nervous system infection by the human immunodeficiency virus (HIV) Type 1, endomyocardial biopsy in cardiac transplant recipients, and evaluation of first trimester abortions are of relevance to forensic pathologists.

The printing and quality of the illustrations are superior. The references are generous and current. I recommend this series for the medical examiner's library.

¹Forensic pathologist, chief medical examiner for Pima County, Arizona, and chief, Forensic Science Center, 2825 E. District St., Tucson, AZ 85714.
