Population Databases:

- NCSBI (1019 individuals): Approximately 372 Caucasian Americans, 383 African Americans, 157 Hispanic Americans⁷ and 107 American Indians (Lumbee⁸).
- PC/BT⁹ (682 individuals): Approximately 172 Caucasian Americans, 139 African Americans, 210 Hispanic Americans and 161 Asian Americans.
- PBSO (617 individuals): Approximately 117 Caucasian Americans, 100 African Americans, 100 Hispanic Americans,

⁷ The data for the Hispanic Americans (all except Penta D) of the NCSBI database were analyzed using the ABI PRISM® 310 Genetic Analyzer and the Profiler Plus™/Cofiler™ kits (Perkin-Elmer, Foster City, CA).

⁸ The Lumbee Indians are not recognized by the Federal Government as a native American Indian tribe.

⁹ Promega Corporation analyzed the African and Asian American samples using the PowerPlex™ 16 system and the ABI PRISM® 310 Genetic Analyzer. Bode Technology Group analyzed the Caucasian and Hispanic American samples using the PowerPlex™ 1.1, 2.1 and the monoplex Penta D (Promega, Madison, WI).

- 100 "No-Black" Brazilians (RNBP), 100 Black Brazilians (RBP), and 100 American Indians (Central West, BCWP).
- VDFS (551 individuals): Approximately 174 Caucasian Americans, 194 African Americans, and 183 Hispanic Americans.

Blood samples collected from individuals were processed for DNA extraction and subsequent STR analysis with the GenePrint® PowerPlex™ 1.1 and 2.1 multiplex systems as well as with the monoplex Penta D (Promega, Madison, WI) using the FMBIO® detection system and software analysis (Hitachi, Alameda, CA) as described by [Levedakou et al. Characterization and validation studies of PowerPlex™ 2.1, a nine-locus short tandem repeat (STR) multiplex system, and Penta D monoplex. *J Forensic Sci*, submitted] (1), except as noted.^{7,9} The allele frequencies of the 15 STR loci (Tables 1–15) were calculated by simple counting and population studies were performed by Dr. B. Weir for the NCSBI population database, Dr. K. McElfresh for the PC/BT and VDFS population databases, and Dr. R. Chakraborty for the PBSO population database. Independence of inheritance was confirmed for all 15 loci by the exact test for Hardy-Weinberg equilibrium for each database. The statistical results are consistent with populations in equilibrium among loci and confirm previous observations (2). Also, forensic (matching probability) and paternity (power of exclusion and typical paternity index) statistics are presented for PowerPlex™ 1.1, PowerPlex™ 2.1, and the new system PowerPlex™ 16 that includes all 15 loci (Table 16). Statistical analysis data are available upon request from the corresponding author.

Acknowledgments

The authors would like to thank Janis R. Matthews from the NCSBI laboratory and Elizabeth A. Amiott, Laura A. Flanagan, and Nadine A. Nassif from Promega for their contributing efforts to these studies.
