European Energy Week/Coal & Power Technology 90 Conference and Exhibition, Amsterdam, The Netherlands, May 21-23, 1990

General information

- To meet the needs of European primary energy producers and consumers in the huge European energy market RAI Gebouw bv is to present a new combined group of exhibitions and conferences under the overall title of 'European Energy Week'.
- Location of these seven 'European Energy Week' events — the PetroTech 90 Exhibition, the Seventh European Petroleum and Gas Conference, Conference on Procurement and Maintenance in the Oil and Gas Industry, Energy Economy 90 Exhibition, Energy Economy 90 Conference, Coal & Power Technology Conference 90, Coal & Power Technology 90 Exhibition, — will be the RAI International Exhibition and Congress Centre, Amsterdam.
- For the first time in its long experience of staging energy events RAI is including the economics and tech-

nology of European electricity generation and supply in its programme. These topics will be given special emphasis in the Coal & Power Technology 90 exhibition and conference programme.

Coal & Power Technology 90

- As the European power industry prepares for a new era of huge investment in reconstruction and new building, the Coal & Power Technology 90 Conference and Exhibition will demonstrate and examine how demand for electrical power in Europe will be met up to and beyond the year 2000.

- At the Conference the business and the science of European power generation and supply in Europe will be discussed by leading European experts. Importantly the environmental effect of future European power plants, their choice and use of primary fuels and the consequent systems and processes needed to control the gaseous, solid and liquid wastes that they will produce, will be given special attention.

- This new stage in the development of power generation and supply in Europe will offer large business opportunities to the hundreds of European suppliers who currently serve the various sectors of the European power industry and to the many new European businesses supplying equipment, materials and services to enhance the environment as power is produced. For *all* these companies the Coal & Power Technology 90 Exhibition will be a matchless marketing medium.

- Electrical Power is a major addi-

tion to the energy programming of Ray Gebouw bv. It will be given the same specialised attention as the RAI oil, gas and coal events.

Environmental issues

- Current international awareness of environmental issues will be reflected in all the events in the 'European Energy Week' programme.

- The 'European Energy Week' programme has been specially planned for *all* involved in the legislation, regulation, operation of and selling to Europe's four huge energy industries – oil, gas, coal and electricity.
