#### Abstract

The preparation of twelve novel $2,3,4,5,10,11$-hexahydro- $1 H$-dibenzo $[b, e][1,4]$ diazepin-1-ones which have potentially useful pharmacological properties; by condensation and cyclization between 3-\{[4-(o-; m-; $p$-methoxy)phenylthio]-1,2-phenylenediamine\}-5,5-dimethyl-2-cyclohexenone with ( $o$-; and $p$-substituted)benzaldehyde. The structure of all final products were corroborated by ir, ${ }^{1} \mathrm{H}-\mathrm{nmr},{ }^{13} \mathrm{C}-\mathrm{nmr}$ and ms .

J. Heterocyclic Chem., 39, 55 (2002).

A piperidine derivative of the dibenzodiazepine family is the clozapine that is an atypical antipsychotic agent with proven efficacy in the management of refractory schizophrenia [3-4]. Currently there is considerable interest in the synthesis of new benzodiazepines with pharmacological activity [5-7]. We have previously reported the synthesis of 2,3-dihydro-2-[o-; and p-substituted)anilinylidene]-1H-4-(p-methylphenyl)-7-[(o-; and p-methyl)phenoxy]-1,5-benzodiazepines [8]; 2-[(o-; and $p$-substituted)aminophenyl $]-3 H-5-[(o-$; and $p$-substituted)phenyl]-7-chloro-1,4-benzodiazepines [9] and 2-methylthio-7-[(o-; $p$-substituted)phenylthio]-1,5-benzodiazepines [10].
As a part of a program directed towards the synthesis and the spectral property determination of dibenzo-[b,e][1,4]diazepin-1-ones derivatives. We describe in this report the synthesis of novel compounds $11-[(o-$; and $p$-substituted)phenyl]-8-[(o-; m-; $p$-methoxy)phenylthio]-3,3-dimethyl-2,3,4,5,10,11-hexahydro-1H-dibenzo $[b, e]$ -

Treatment of 4-[(o-; m-; p-methoxy)phenylthio]-1,2phenylenediamines I with 5,5-dimethyl-1,3-cyclohexanedione II at reflux in anhydrous benzene with a Dean-Stark apparatus were performed for 24 hours to obtain the $3-\{[4-$ (o-; m-; p-methoxy)phenylthio]-1,2-phenylenediamine \}-5,5-dimethyl-2-cyclohexenone III, which have been obtained in $55-60 \%$ yields. A mixture of 0.001 mole of compounds III, 0.001 mole of the corresponding ( $o-$; and $p$-substituted)benzaldehyde in the presence of a few drops of acetic acid at reflux in ethanol for 1.5 hours afforded the $11-[(o-;$ and $p$ -substituted)phenyl]-8-[(o-; m-; p-methoxy)phenylthio]-3,3-dimethyl-2,3,4,5,10,11-hexahydro-1 $H$-dibenzo $[b, e][1,4]-$ diazepin-1-ones IV, 1-12 in 45-70\% yields.

The infrared spectrum of compounds $\mathbf{1 - 1 2}$, displayed absorptions at $3410-3412 \mathrm{~cm}^{-1}$ for $\mathrm{N}-\mathrm{H}$ stretching, at
$1597-1616 \mathrm{~cm}^{-1}$ for $\mathrm{C}=\mathrm{O}$ stretching, at 1387-1393 and 1273-1365 $\mathrm{cm}^{-1}$ for C-N stretching, at 1177-1151 and $1028-1094 \mathrm{~cm}^{-1}$ for C-O stretching and the corresponding absorptions for aromatic and R-substituents.
In the ${ }^{1} \mathrm{H}-\mathrm{nmr}$ spectra the presence of two singlet signals at $\delta 1.01-1.16$ were assigned to the methyl protons at $\mathrm{C}-3$. The presence of a doublet at $\delta 2.23-2.25$ and 2.30-2.32 was consistent with the methylene protons at $\mathrm{C}-2$. The presence of a doublet at $\delta 2.40-2.49$ and 2.54-2.62 was consistent with the methylene protons at $\mathrm{C}-4$. The presence of a doublet at $\delta$ 5.83-6.22 was consistent with the methyne proton at $\mathrm{C}-11$. The presence of a broad proton signal at $\delta 6.27$ 6.59 was consistent with $\mathrm{N}-\mathrm{H}$, deuterium oxide exchangeable. The presence of a three proton multiplet signal at $\delta$
6.28-6.80 was assigned to the aromatic protons at C-6, C-7 and C-9 of the dibenzodiazepine framework. The other aromatic protons appeared as a multiplet and an AA'BB' system at $\delta 6.58-7.30$ and with the signal for the R-substituents.

The ${ }^{13} \mathrm{C}-\mathrm{nmr}$ spectra data for compounds $\mathbf{1 - 1 2}$ are given in Table 1. The signals were confirmed by using HETCOR, COSY, FLOCK, and NOESY nmr experiments operating at 300 and 500 MHz .

The mass spectra for compounds $\mathbf{1 - 1 2}$ include ions of $\mathrm{m} / \mathrm{z}$ corresponding to molecular ion $[\mathrm{M}]^{+} ;\left[\mathrm{M}-\mathrm{CH}_{3}\right]^{+} ;\left[\mathrm{M}-\mathrm{CH}_{4}\right]^{+}$; $[\mathrm{M}-\mathrm{R}]^{+} ;[\mathrm{M}-(\mathrm{HR})]^{+} ;\left[\mathrm{M}-\left(\mathrm{R}+\mathrm{CH}_{4}\right)\right]^{+} ;[\mathrm{M}-47]^{+} ;[\mathrm{M}-57]^{+} ;[\mathrm{M}-$ 84] ${ }^{+}$[M-85]+; [M-(76+R)]+; m/z 363; 351; 311; 275; 240; 83. 11-[(o-methoxy)phenyl]-8-[( $m$-methoxy)phenylthio]-3,3-dimethyl-2, $3,4,5,10,11$-hexahydro- 1 H -dibenzo [b,e][1,4]diazepin-1-ones and 11-[(o-methoxy)phenyl]-8-[(p-methoxy)phenylthio]- 3,3-dimethyl-2,3,4,5,10,11-hexahy-dro- $1 H$-dibenzo [b,e] $[1,4]$ diazepin-1-ones in which the base peak corresponds to the fragment ion [M-47] ${ }^{+}$. The mass spectra of the compounds exhibit a stable molecular ion; and the main fragmentation was consistent with the assigned structures. The proposed fragmentation pathways leading to the formation of a number of important daughter ions have been confirmed by the corresponding parent ion spectra using collision-induced dissociation experiments. The elemental composition of the molecular ion and the principal fragment ion was determined by mass measurements.

## EXPERIMENTAL

The ir spectra were recorded on a Nicolet Magna TR-750 spectrophotometer. The ${ }^{1} \mathrm{H}-\mathrm{nmr}$ spectra were recorded on a Varian Unity 300 spectrometer operating at 300 MHz and the ${ }^{13} \mathrm{C}-\mathrm{nmr}$ spectra were recorded on a Varian Unity 500 spectrometer operating at 125 MHz in deuteriochloroform solution containing tetramethylsilane as the internal standard with chemical shifts $\delta$ (ppm) expressed downfield from tetramethylsilane. The mass spectra were measured on a JEOL JMS-AX505 and JEOL MSSX 102A high resolution mass spectrometer with accurate mass determination of the molecular ion and the principal fragments ions, using the direct inlet system. The spectra were recorded by electron impact at an ionization chamber temperature of $190^{\circ}$ and ionizing electron energy of 70 eV .
The 4-[(o-; m-; p-methoxy)phenylthio]-1,2-phenylenediamines I was prepared following literature methods with modifications [11].
General Procedure for the Synthesis of the 3-\{4-[(o-; m-; p-Methoxy)phenylthio]-1,2-phenylenediamine\}-5,5-dimethyl-2cyclohexenone III.

A mixture of 0.01 mole of 4-[ $(o-; m$-; $p$-methoxy)phenylthio]-1,2-phenylenediamines $\mathbf{I}, 0.01$ mole of 5,5 -dimethyl-1,3-cyclohexanedione II in 10 ml of dry benzene was heated at reflux with a Dean-Stark apparatus for 24 hours. The reaction mixture was cooled to room temperature and evaporated in vacuo to yield a semisolid. The residual semisolid was purified on a silica gel chromatography column and elution with hexane-ethyl acetate (1:9) to yield the compounds III, with $55-60 \%$ yield.

General Procedure for the Synthesis of the 11-[( $o-$; and $p$-Substituted)phenyl]-8-[(o-; m-; p-methoxy)phenylthio]-3,3-dimethyl-2,3,4,5,10,11-hexahydro-1 $H$-dibenzo[b, e] [1,4]-diazepin-1-ones IV, 1-12.

A mixture of 0.001 mole of $3-\{4-[(o-; m-; p$-methoxy $)$ phenyl-thio]-1,2-phenylenediamine \}-5,5-dimethyl-2-cyclohexenone III, 0.001 mole of corresponding ( $o-$; and $p$-substituted)benzaldehyde, 0.5 ml of acetic acid in 5 ml ethanol was heated at reflux for 1.5 hours. The reaction mixture was cooled to room temperature and evaporated in vacuo to yield a semisolid. The residual semisolid was purified by crystallization from hexane-ethyl acetate to yield compounds IV, 1-12 ( $45-70 \%$ ).
