Chemistry Department, Faculty of Science, Assiut University, Assiut, Egypt<br>*Chemistry Department, Faculty of Science, $7^{\text {th }}$ October University, Misurata, Libya. Received June 12, 2006

The reaction of $N$-(3-carbethoxy-4,5,6,7-tetrahydrobenzo[b]thien-2-yl)- $N$ '-phenylthiourea (1) with hydrazine hydrate in 1-butanol afforded a mixture of compounds $\mathbf{2 , 3}$ and $\mathbf{4}$. Treatment of $\mathbf{3}$ and $\mathbf{4}$ with nitrous acid gave 6 and $\mathbf{8}$ respectively, while reactions of $\mathbf{3}$ with acetylacetone gave 7. Synthesis of tetracyclic compounds $\mathbf{9 a}$-f and $\mathbf{1 1}$ from the reactions of $\mathbf{3}$ with ethyl orthoformate or appropriate acids, acid chloride, carbon disulphide and/or ethyl chloroformate. Also its reaction with isothiocyanate derivatives gave the corresponding thiosemicarbzides 12a,b which on, refluxing in alcoholic KOH gave the unexpected tetracyclic products $\mathbf{1 4 a , b}$. Similarly the tetracyclic compounds $\mathbf{1 6 a}$-e and $\mathbf{1 9}$ were obtained by cyclization of $\mathbf{4}$ and $\mathbf{1 8}$ respectively.
J. Heterocyclic Chem., 45, 467 (2008).

## INTRODUCTION

Thienopyrimidines, have been evaluated pharmacologically as anti-malarial [1] antibacterial [1,6], analgesic and anti-inflammatory [7,11], diuretic activity in rats [12], antiviral [13], antifungal effect [14], herbicidal activity and antimycotoxigenic activity [15]. Besides the synthetic methods of 3-amino-3,4-dihydro-2-arylamino-thieno[2,3- $d$ ]pyrimidin- $4(3 H)$-ones, a new route has appeared in the literature by refluxing of N -(3-carbethoxy-thien-2-yl)- $N^{\prime}$-arylthiourea 1 with neat hydrazine hydrate [16-18], or in ethanol. Investigation of the reported results show different melting points for the same compound besides the low yield of reaction products aroused our interst in reinvestigation of these reactions and their cyclization reactions.

## RESULTS AND DISCUSSION

The starting compound $\mathbf{1}$ was prepared by treatment of 2-amino-3-carbethoxy-4,5,6,7-tetrahydrobenzo[b]thiophene with phenylisothiocyanate in boiling ethanol. Refluxing of 1 with hydrazine hydrate in ethanol for 12 hours gave a solid crystalline product with $\mathrm{mp} .205-207{ }^{\circ} \mathrm{C}$ in $50 \%$ yield as previously reported [16]. A tlc of the reaction products showed the presence of two compounds which could be separated by recrystallization and identified as the two isomeric products 2-hydrazino-3-phenyl-5,6,7,8tetrahydrobenzo $[b]$ thieno[2,3- $d$ ]pyrimidin-4(3H)-one (3) and 3-amino-2-phenylamino-5,6,7,8-tetrahydrobenzo $[b]$ thieno $[2,3-d]$ pyrimidin- $4(3 H)$-one (4).

Further, the product obtained by dilution and neutralization of the basic filtrate was characterized as 2-

## Scheme 1

mercapto-3-phenyl-5,6,7,8-tetrahydrobenzo[b]thieno[2,3-d]pyrimidin-4(3H)-one 2 in $42 \%$ yield (Scheme 1). However the yield, of the latter compound was decreased either by using 1-butanol instead of ethanol as a solvent, or by increasing the reaction time.

This behaviour may be due to the conversion of 2 to $\mathbf{3}$ and 4, which was formed at first then reacted with hydrazine (Scheme 1).

The conversion of $\mathbf{2}$ to $\mathbf{3}$ and $\mathbf{4}$ may be explained by nucleophilic attacking of hydrazine on the electrophilic centers $\mathrm{C}_{2}$ and $\mathrm{C}_{4}$ respectively (Scheme 2).

Scheme 2

5

On the other hand, it may be assumed that $\mathbf{3}$ was formed at the beginning of the reaction as a kinetic product then transformed to $\mathbf{4}$ as a thermodynamic product through the Dimroth [19] rearrangement. This assumption was clarified as the 2-hydrazino derivative $\mathbf{3}$ was obtained in $90 \%$ yield when 5 was reacted with hydrazine hydrate (Scheme 2). Further, the conversion of 3 to the tetrazolo derivative 6 via its reaction with $\mathrm{HNO}_{2}$, and the formation of 2-[3,5-dimethylpyrazol-1-yl]-3-phenyl-5,6,7,8-tetrahydrabenzo[b]thieno[2,3-d]pyrimidin-4(3H)-one (7) via its condensation with acetylacetone, are considered as additional evidence of its structure as 2hydrazino derivative 3 (Scheme 3).

Also, the structure of 4 was chemically confirmed via its reactions with $\mathrm{HNO}_{2}$, which yielded 2-phenylamino-

Scheme 3

5,6,7,8-tetrahydrobenzo[b]thieno[2,3-d]pyrimidin-4(3H)one 8 , as previously reported with similar compounds [20].

In continuation of our earlier work [21-24] on the cyclization reactions of heterocyclic hydrazines with different carbonyl compounds, it was of interest to investigate the susceptibility of 2-hydrazino-3-phenylthienopyrimidine $\mathbf{3}$ towards ring closure reactions with different reagents. Refluxing of $\mathbf{3}$ with triethyl orthoformate or with either formic acid or formamide afforded the same product 4-phenyl-6,7,8,9-tetrahydro-benzo[b]thieno[3,2-e]-1,2,4-triazolo[4,3-a]pyrimidin-5-one 9a. It appears that when boiling formic acid or formamide is used for the cyclization of compound 3, the [4,3a]triazolo derivative 9a does not undergo rearrangement to its $\left[2,3-a\right.$ ] isomer $9 \mathbf{a}^{\prime}$ as previously reported $[25,26]$. Similarly the 2-hydrazino compound 3 was reacted with acetic acid or acetic anhydride, propionic acid, and lactic acid to give the corresponding 1 -substituted triazolo[4,3$a$ ]thienopyrimidine derivatives $\mathbf{9 b}$-d. While refluxing with benzoyl chloride afforded 1,4-diphenyl triazolo[4,3-a]thienopyrimidine 9e. Further, the reaction with carbon disulfide in boiling alcoholic KOH gave 1-mercapto-4phenyltirazolo [4,3-a]thienopyrimidine 9f. The hydrazino compound 3 was also reacted with ethyl chloroformate to give 2-ethoxycarbonylhydrazino-4-phenylthienopyrimidine derivative $\mathbf{1 0}$, which was cyclized to 4-phenyltriazole-[4,3-a]thienopyrimidin-1,5-dione $\mathbf{1 1}$ on heating over its melting temperature (Scheme 4).
Treatment of the hydrazino derivative 3 with ethylisothiocyanate in boiling 1-butanol afforded the thiosemicarbazide derivative 12a. Refluxing of 12a in alcoholic KOH to prepare 1-ethylamino-1,2,4-triazolo[4,3-a]thienopyrimidine $\mathbf{1 3}$ as previously reported with similar systems [27], afforded an unexpected product in which aromatic
proton resonances were not observed in its NMR spectrum. On the basis of elemental analysis, IR, ${ }^{1} \mathrm{H}$ NMR

The formation of $\mathbf{1 4 a , b}$ could be explained as shown in (Scheme 6 ).

Scheme 4

and mass spectra data, the reaction product was characterized as 3-ethyl-2-mercapto-1,2,4-triazolo-[1,5-a]-6,7,8, 9 -tetrahydrobenzo $[b]$ thieno[2,3- $d]$ pyrimidin-10-one (14a), similarly, treatment of $\mathbf{3}$ with phenylisothiocyanate afforded the corresponding thiosemicarbazide derivative 12b, which on refluxing with alcoholic KOH afforded 2-mercapto-3-phenyl-1,2,4-triazolo[1,5-a]-6,7,8,9-tetrahydro $[b]$ thieno $[2,3-d]$ pyrimidin-10-one (14b) (Scheme 5).

Scheme 6

On the other hand, refluxing of 3-amino-2-phenyl-amino-5,6,7,8-tetrahydrobenzo[b]thieno[2,3- $d$ ]pyrim-idin-4-one (4) with triethyl orthoformate gave 3phenyltriazole $[1,5-a]$-6,7,8,9-tetrahydrobenzo $[b]$ thieno-[2,3- $d$ ]pyrimidin-10-one (16a). The same product was obtained on refluxing of 4 with formic acid or formamide. Further, refluxing of 4 with acetic acid and acetic anhydride afforded $\mathbf{1 6 b}$ and $\mathbf{1 7}$ respectively. Refluxing of $\mathbf{1 7}$ in AcOH gave $\mathbf{1 6 b}$ in good yield. Similarly, refluxing of 4 with propionic acid, lactic acid, benzoyl chloride gave the tetracyclic products 16c-e respectively. While with ethyl chloroformate gave 3-ethoxycarbonylamino-2-phenylamino-5,6,7,8-
tetrahydro-benzo $[b]$ thieno- $[2,3-d]$ pyrimidin-4-one (18), which was cyclized to 3-phenyl-triazolo[1,5-a]-6,7, 8,9-tetrahydrobenzo[b]thieno[2,3-d]pyrimidin-2,10dione $\mathbf{1 9}$ on heating over its melting (Scheme 7).

## EXPERIMENTAL

General. Melting points were measured on a Gallen-Kamp melting point apparatus and are uncorrected. The ultraviolet spectra were recorded using UV-2011 PC, UV-Vis scanning spectrophotometer-shimadzu. The infrared spectra were recorded on IR-470, IR spectrophotometer-shimadzu-using KBr and $\mathrm{CCl}_{4}$. The ${ }^{1} \mathrm{H}-\mathrm{NMR}$ spectra were recorded by either varian EM-390 ( 90 MHz ) or by ${ }^{1} \mathrm{H}$ NMR LA 400 MHz (Jeol) Assiut University. Elemental analysis was carried out by Elemental analyzer system CmbH vario El at Assiut University. Ethyl acetate (EA), Benzene (B) mixture was used as an eleuent in tlc chromatography.
$N$-(3-Carbethoxy-4,5,6,7-tetrahydrobenzo[b]thien-2-yl- $N^{\prime}$ phenylthiourea (1). A mixture of 2 -amino-3-carbethoxy-4,5, 6,7 -tetrahydrobenzo $[b]$ thiophene $(11.25 \mathrm{~g} 0.05 \mathrm{~mol})$ and phenyl isothiocyanate ( $7 \mathrm{~g}, 0.052 \mathrm{~mol}$ ) was refluxed 5 hours in ethanol $(25 \mathrm{ml})$. A crude solid product formed while hot and was collected by filtration and recrystallized from ethanol. Yield $95 \% ; \mathrm{mp} 192^{\circ} \mathrm{C}$ (ethanol) (reported) $184-187^{\circ} \mathrm{C}$ [28].

2,3-Disubstituted-5,6,7,8-tetrahydrobenzo $[b]$ thieno $[2,3-d]$ -pyrimidin-4(3H)-ones (2-4). A mixture of thiourea derivative $\mathbf{1}$ ( $10.8 \mathrm{~g}, 0.03 \mathrm{mmol}$ ) and excess of hydrazine hydrate in ethanol or 1-butanol was refluxed for about 10-50 hours. Separated solid product was collected by filtration, washed several times with KOH solution $(2.5 \%)$, then with water and dried. The crude product was recrystallized from DMF several times to isolate 3 and $\mathbf{4}$ in pure state.

2-Mercapto-3-phenyl-5,6,7,8-tetrahydrobenzo $[b]$ thieno-[2, 3- $d$ ]pyrimidin-4(3H)-one (2). Was obtained by neutralization of the reaction filtrate with dilute iced HCl then collection by filtration and recrystallized from ethanol. $\mathrm{Mp} .330^{\circ} \mathrm{C}$ (reported)
$315^{\circ} \mathrm{C}$ [29] ; $\mathrm{R}_{\mathrm{f}} 0.83$ (EA/B 3:7).
2-Hydrazino-3-phenyl-5,6,7,8-tetrahydrobenzo[b]thieno-[2,3-d]pyrimidin-4(3H)-one (3). Mp. $250^{\circ} \mathrm{C}$ (DMF), (reported) $250^{\circ} \mathrm{C}$ [30] (benzene). $\mathrm{R}_{\mathrm{f}} 0.37$ (EA/B 3:7). 2-Ethylthio-3-phenyl-5,6,7,8-tetrahydrobenzo[b]thieno-[2, 3- $d$ ]pyrimidin-4(3H)-one (5). Compound 5 was obtained by refluxing $2(0.3 \mathrm{~g} 0.001 \mathrm{~mol})$ with ethyl iodide (excess) in 20 ml alcoholic KOH (3\%) for 4 hours. The separated product was crystallized from ethanol. Yellowish crystals, mp $186^{\circ} \mathrm{C}$ (reported) $194^{\circ} \mathrm{C}$ [32]. ${ }^{1} \mathrm{H} \operatorname{NMR}\left(\mathrm{CDCl}_{3}\right) \delta 1.28\left(\mathrm{t}, 3 \mathrm{H}, \mathrm{CH}_{3}\right)$, $1.82\left(\mathrm{~m}, 4 \mathrm{H}, \mathrm{H}_{7}, \mathrm{H}_{8}\right), 2.71\left(\mathrm{~m}, 4 \mathrm{H}, \mathrm{H}_{6}, \mathrm{H}_{9}\right), 3.22\left(\mathrm{q}, 2 \mathrm{H},-\mathrm{SCH}_{2}-\right)$, $7.23\left(\mathrm{~m}, 5 \mathrm{H}, \mathrm{C}_{6} \mathrm{H}_{5}\right) \mathrm{ppm} . \mathrm{R}_{\mathrm{f}} 0.83$ (EA/B 1:1). Elemental analysis for $\mathrm{C}_{18} \mathrm{H}_{18} \mathrm{~N}_{4} \mathrm{OS}_{2}$ (338): $\mathrm{S} ; 18.75$. Found $\mathrm{S} ; 18.70$ ).

4-Phenyl-1,2,3,4-tetrazolo[1,5-a]-6,7,8,9-tetrahydrobenzo-[b]thieno-[3,2-e]pyrimidin-5-one (6). Stirring of $\mathbf{3}(1 \mathrm{~g}, 0.003$ mol) with 50 ml acetic acid at $0^{\circ} \mathrm{C}, 3 \mathrm{ml}$ saturated solution of $\mathrm{NaNO}_{2}$ was added dropwise at 15 min . to the reaction mixture. Stirring was continued for about 3 hours, then the product was extracted using benzene which was evaporated under reduced pressure and crystallized from petroleum ether, $\mathrm{mp} 205^{\circ} \mathrm{C}$; $\mathrm{R}_{\mathrm{f}}$ 0.72 (EA/B 1:1). The IR ( KBr ) spectra lacked the $\mathrm{NHNH}_{2}$ absorption at $3300-3100 \mathrm{~cm}^{-1}$ and the azide absorption in the region 2200-2100 cm ${ }^{-1}$. ${ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CDCl}_{3}\right): \delta 1.80\left(\mathrm{~m}, 4 \mathrm{H}, \mathrm{H}_{7}\right.$, $\left.\mathrm{H}_{8}\right), 2.70\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{H}_{6}\right), 2.85\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{H}_{9}\right), 7.20(\mathrm{~m}, 5 \mathrm{H}$, aromatic protons) $\mathrm{ppm} . \mathrm{MS} \mathrm{m} / \mathrm{z}(\%)\left[\mathrm{M}^{+}, 323\right.$ (52)], 295 (76), 267 (100). Elemental analysis for $\mathrm{C}_{16} \mathrm{H}_{13} \mathrm{~N}_{5} \mathrm{OS}$ (323), Calcd: C, 59.43 H ; 4.05, N; 21.66, S; 9.92\%. Found: C; 59.79, H; 4.51, N: 20.90, S; 9.67\%.

2-[3,5-Dimethylpyrazol-1-yl]-3-phenyl-5,6,7,8-tetrahydrobenzo $[b]$ thieno $[2,3-d]$ pyrimidin-4(3H)-one (7). 2-Hydrazino derivative $3(1 \mathrm{~g} 0.003 \mathrm{~mol})$ was refluxed in 10 ml acetylacetone for 7 hours. The excess acetylacetone was evaporated on a water bath. The separated product was crystallized from benzenepetroleum ether mixture, $\mathrm{mp} 156^{\circ} \mathrm{C} . \mathrm{R}_{\mathrm{f}} 0.76$ (EA/B 3:7). UV: $\lambda_{\max } 325.5,(1.254), 243.5(1.246) .{ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CDCl}_{3}\right) \delta 1.85(\mathrm{~m}$, $4 \mathrm{H}, \mathrm{H}_{6}, \mathrm{H}_{7}$ ), two singlets at 2.00, $2.20\left(6 \mathrm{H}\right.$, two $\mathrm{CH}_{3}$ groups), $2.80\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{H}_{5}\right), 3.00\left(\mathrm{~s}, 2 \mathrm{H}, \mathrm{H}_{8}\right), 5.60$, ( $\mathrm{s}, 1 \mathrm{H}, \mathrm{CH}$ ), $7.25(\mathrm{~m}$, $\left.5 \mathrm{H}, \mathrm{C}_{6} \mathrm{H}_{5}\right) \mathrm{ppm} . \mathrm{MS} \mathrm{m} / \mathrm{z}(\%)\left[\mathrm{M}^{+}, 376\right.$ (85.3)]. Elemental analysis for $\mathrm{C}_{21} \mathrm{H}_{20} \mathrm{~N}_{4} \mathrm{OS}$ (376), Calcd: C; 67.00, H; 5.35, N; 14.88 , S; 8.52\%. Found: C; 66.84, H; 5.60, N; 14.54, S; 8.24\%.

2-Phenylamino-5,6,7,8-tetrahydrobenzo[b]thieno[2,3-d]pyr-imidin-4(3H)-one (8). Using the same method as for the synthesis of compound $\mathbf{6 ;} \mathrm{mp} 286^{\circ} \mathrm{C}$ from cyclohexane (reported) $284-286^{\circ} \mathrm{C}$ [33]. $\mathrm{R}_{\mathrm{f}} 0.54$ (EA/B 1:1). IR (KBr) $v$
$3350(\mathrm{NH}) \mathrm{cm}^{-1} . \mathrm{MS} \mathrm{m} / \mathrm{z}(\%)$ [M., 297 (100)]. Elemental analysis for $\mathrm{C}_{16} \mathrm{H}_{15} \mathrm{~N}_{3} \mathrm{OS}$ (297), Calcd: C; 64.62, H; 5.08, N; 14.13, S; 10.78. Found: C; 64.40, H; 4.55, N; 14.01, S; 9.72\%.

1,4-Disubstituted-6,7,8,9-tetrahydrobenzo [b]thieno[3,2-e]-[1,2,4]triazolo[4,3-a]pyrimidin-5-ones (9a-d). General. A mixture of $3(1 \mathrm{~g}, 0.003 \mathrm{~mol})$ with the appropriate acid, ethyl orthoformate, acetic anhydride, was refluxed for about 6-8 hours. A white ppt formed and was washed with iced ammonia. The crud product was crystallized from an ethanol-benzene mixture in $90-96 \%$ yield.
9a. Yield (90\%); mp. $302{ }^{\circ} \mathrm{C}$ (reported) $298-300{ }^{\circ} \mathrm{C}[30] \mathrm{R}_{\mathrm{f}}$ 0.83 (EA/B 6:4). 3-Ethoxycarbonylamino-2-phenylamino-5,6,7,8-tetrahydro-benzo[b]thieno[2,3-d]pyrimidin $-4(3 H)-4$-one (18) and 3phenyltriazolo $[1,5-a]-6,7,8,9$-tetrahydrobenzo $[b]$ thieno $[2,3-d]$ -pyrimidin-2,10-dione (19).

Method A. $4(1 \mathrm{~g}, 0.003 \mathrm{~mol})$ was allowed to reflux in ethyl chloroformate $(15 \mathrm{ml})$ for 2 hours, cooled, the solid collected by
filtration, washed with ethanol and recrystallized from ethanol as a colorless crystals of $\mathbf{1 8}$ in $93.2 \%$, yield.

Method B. A mixture of 4 ( 1 g 0.003 mole) and ethyl chloroformate $(5 \mathrm{ml})$ in dry acetone $(20 \mathrm{ml})$ in the presence of anhydrous $\mathrm{K}_{2} \mathrm{CO}_{3}$ was refluxed for 3 hours on water both, filtered, the solvent evaporated on water bath, compound 18 filtered and crystallized from ethanol in $87 \%$ yield. Heating of 18 over its mp for 5 minutes gave 19 in high yield.
18. $\mathrm{mp} 222^{\circ} \mathrm{C}$ (ethanol), IR (KBr) v 3310 (NH), 1725, 1660 $(2 \mathrm{C}=\mathrm{O}) .{ }^{1} \mathrm{H} \operatorname{NMR}\left(\mathrm{CDCl}_{3}\right) \delta 1.20\left(\mathrm{t}, 3 \mathrm{H}, \mathrm{CH}_{3}\right), 1.74\left(\mathrm{~m}, 4 \mathrm{H}, \mathrm{H}_{6}\right.$, $\left.\mathrm{H}_{7}\right), 2.59\left(\mathrm{~m}, 2 \mathrm{H}, \mathrm{H}_{5}\right), 2.80\left(\mathrm{~m}, 2 \mathrm{H}, \mathrm{H}_{8}\right), 4.19\left(\mathrm{q}, 2 \mathrm{H}, \mathrm{CH}_{2}\right), 7.35$ $\left(\mathrm{m}, 5 \mathrm{H}, \mathrm{C}_{6} \mathrm{H}_{5}\right), 8.10(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}), 9.420(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}) \mathrm{ppm} . \mathrm{MS}$ $\mathrm{m} / \mathrm{z}(\%)\left[\mathrm{M}^{+}, 384\right.$ (100)]. Elemental analysis of $\mathrm{C}_{19} \mathrm{H}_{20} \mathrm{~N}_{4} \mathrm{O}_{3} \mathrm{~S}$ (384), Calcd: C; 59.36, H; 5.24, N; 14.57, S; 8.34\%. Found: C; $59.98, \mathrm{H} ; 4.81, \mathrm{~N} ; 15.06, \mathrm{~S} ; 8.59 \%$.
19. mp over $360^{\circ} \mathrm{C}$. IR (KBr) v $3300(\mathrm{NH}), 1750(\mathrm{C}=\mathrm{O})$ of triazole ring, $1670(\mathrm{C}=\mathrm{O}) \mathrm{cm}^{-1} .{ }^{1} \mathrm{H} \mathrm{NMR}\left(\mathrm{CDCl}_{3}\right) \delta$ $1.74\left(\mathrm{~m}, 4 \mathrm{H}, \mathrm{H}_{6}, \mathrm{H}_{7}\right), 2.59\left(\mathrm{~m}, 2 \mathrm{H}, \mathrm{H}_{5}\right), 2.80\left(\mathrm{~m}, 2 \mathrm{H}, \mathrm{H}_{8}\right)$, $7.35\left(\mathrm{~m}, 5 \mathrm{H}, \mathrm{C}_{6} \mathrm{H}_{5}\right), 8.22(\mathrm{~s}, 1 \mathrm{H}, \mathrm{NH}) \mathrm{ppm} \mathrm{MS} \mathrm{m} / \mathrm{z}(\%)$ [M., 338 (100)]. Elemental analysis for $\mathrm{C}_{17} \mathrm{H}_{14} \quad \mathrm{~N}_{4} \mathrm{O}_{2} \mathrm{~S}$ (338), Calcd: C; 60.34, H; 4.17, N; 16.56, S; 9.48. Found: C; 60.79, H; 4.23, N; 17.19, S; 9.86.
