Erratum to: J Ind Microbiol Biotechnol DOI 10.1007/s10295-013-1282-6

In the original publication of the article, some errors were identified in Table 6. The corrected text and table are given below

1. In Table 6: For the strain YRL005 at 42 °C with 50 g/l xylose, in the column of Xylose consumption (g/l), the number should be 30.15 ± 0.38 . And for the same strain at 45 °C, the number in the column of Xylose consumption (g/l) should be 16.6 ± 0.11 , and in the column of Ethanol (g/l), the number should be 5.21 ± 0.07 . For the *S. cerevisiae* H131-A3-AL^{CS},

the Xylose consumption (g/l) should be 40, and the temperature (°C) should be 30. The corrected table is given here.

2. In the Introduction: In the second page, right column, line 12 “Because *K. marxianus* 1777 could ferment with glucose rather well (0.49 g/g) at 45 °C, the experiments at 45 °C were used to determine if the strain YRL005 can also ferment xylose well.” should be “Because *K. marxianus* NBRC 1777 could ferment with glucose rather well (0.49 g/g) at 45 °C, the experiments at 45 °C were used to determine if the strain YRL005 can also ferment xylose well.”

Values are presented as mean and standard deviation of three independent experiments

If a reference contained several strains, only the best one is shown here. The data without the standard deviation were due to no standard deviation provided in the original paper
