

**SPECIAL
ANNOUNCEMENT**

With effect from Volume XII the title of this journal will become:

Journal of Labelled Compounds and Radiopharmaceuticals

Henceforward the editorial policy is as follows:

The major purpose of this journal is to publish material on the synthesis of labelled compounds involving stable and radioactive nuclides. This includes all compounds in which the natural composition of one or more of its constituent atoms has been altered. Manuscripts dealing with new syntheses, special purification methods, analytical problems, quality control, autoradiolysis, production and handling of nuclides (for use as radiopharmaceuticals), problems involving the use of nuclides near natural abundance to highly enriched nuclides, special problems involving multi curie amounts of activity and other pertinent problems will be considered for publication. Manuscripts dealing with radiopharmaceuticals where the focus is on preparation of the necessary nuclides and compounds or on the many special problems relating to synthetic and production work in this area will receive special attention.
