

- 1** Chemically amplified  $^{19}\text{F}$ - $^1\text{H}$  nuclear Overhauser effects  
I. Kuprov and P.J. Hore
- 8** Towards quantitative measurements in solid-state CPMAS NMR: A Lee-Goldburg frequency modulated cross-polarization scheme  
Riqiang Fu, Jun Hu, and Timothy A. Cross
- 18** The effects of cholesterol on magnetically aligned phospholipid bilayers: a solid-state NMR and EPR spectroscopy study  
Jun-Xia Lu, Marc A. Caporini, and Gary A. Lorigan
- 31** Self-diffusion measurements with chemical shift resolution in inhomogeneous magnetic fields  
Daniel Topgaard and Alexander Pines
- 36** CORCEMA refinement of the bound ligand conformation within the protein binding pocket in reversibly forming weak complexes using STD-NMR intensities  
V. Jayalakshmi and N. Rama Krishna
- 46** Reduced apparent longitudinal relaxation times in slice-selective experiments in strong magnetic field gradients  
Nikolaus Nestle, Bernadeta Walaszek, and Markus Nolte
- 53** Subspace-based MRS data quantitation of multiplets using prior knowledge  
T. Laudadio, Y. Selén, L. Vanhamme, P. Stoica, P. Van Hecke, and S. Van Huffel
- 66** Low temperature solid-state NMR experiments of half-integer quadrupolar nuclides: caveats and data analysis  
Andrew S. Lipton, Robert W. Heck, Jesse A. Sears, and Paul D. Ellis
- 75** 2D TRIPLE in orientationally disordered samples—a means to resolve and determine relative orientation of hyperfine tensors  
D. Goldfarb, B. Epel, H. Zimmermann, and G. Jeschke
- 88** Hyperfine decoupling in electron paramagnetic resonance as a powerful tool for unraveling complicated ESEEM spectra of  $S = 1/2$ ,  $I \geq 1/2$  systems  
George Mitrikas and Arthur Schweiger
- 97** Frequency shifts in parametrically enhanced low-field MR detection  
Daniel W. Sinkovits and Mark S. Conradi
- 103** Design of a constant adiabaticity pulse for selective population inversion  
Lorenz Mitschang, Bernd Ittermann, Florian Schubert, and Herbert Rinneberg
- 110** Tailored sinc pulses for uniform excitation and artifact-free radio frequency time-domain EPR imaging  
N. Devasahayam, R. Murugesan, K. Matsumoto, J.B. Mitchell, J.A. Cook, S. Subramanian, and M.C. Krishna

*Continued*

Abstracting and indexing coverage for the *Journal of Magnetic Resonance* includes Adonis UK, Chemical Abstracts, INSPEC UK, ISI's Science Citation Index, and Index Medicus (MEDLINE)

- 118 The application of the ERETIC method to 2D-NMR**  
Nathalie Michel and Serge Akoka
- 124 Resolution of  $^{13}\text{C}$ - $^{19}\text{F}$  interactions in the  $^{13}\text{C}$  NMR of spinning solids and liquid crystals**  
Giancarlo Antonioli and Paul Hodgkinson
- 132 Electron spin-relaxation via vibronic level of nickel (I) and nickel (III) cyanide complexes in NaCl single crystals**  
N.V. Vugman, M.B. de Araújo, N.M. Pinhal, C.J. Magon, and A.J. da Costa Filho
- 137 Rotational resonance in uniformly  $^{13}\text{C}$ -labeled solids: effects on high-resolution magic-angle spinning NMR spectra and applications in structural studies of biomolecular systems**  
Aneta T. Petkova and Robert Tycko
- 147 Cross-polarization schemes for peptide samples oriented in hydrated phospholipid bilayers**  
Hyeonnam Kim, Timothy A. Cross, and Riqiang Fu
- 153 Orientation of the antimicrobial peptide PGLa in lipid membranes determined from  $^{19}\text{F}$ -NMR dipolar couplings of 4- $\text{CF}_3$ -phenylglycine labels**  
Ralf W. Glaser, Carsten Sachse, Ulrich H.N. Dürr, Parvesh Wadhvani, and Anne S. Ulrich
- 164 Distortion-free single point imaging of multi-layered composite sandwich panel structures**  
Andrew E. Marble, Igor V. Mastikhin, Rod P. MacGregor, Mohamad Akl, Gabriel LaPlante, Bruce G. Colpitts, Pearl Lee-Sullivan, and Bruce J. Balcom
- 175 NMR acceleration mapping in percolation model objects**  
Bogdan Buhai, Aidar Hakimov, Ioan Ardelean, and Rainer Kimmich
