

Editorial foreword

Mathematical chemistry interconnects fundamental molecular theory with computational applications. The 1991 MATH/CHEM/COMP conference in Dubrovnik, Croatia, 24–29 June 1991, was organized jointly by the Florida State University, Tallahassee, the Inter-University Center, Dubrovnik, the University of Zagreb, and Rugjer Boskovic Institute, Zagreb.

The conference has covered the entire range of disciplines linked to mathematical chemistry. Whereas the military crisis in the Balkans kept many scientists away, the meeting has motivated novel works and new interactions among mathematical chemists. This collection of papers is devoted to the subjects covered by the conference.
