This work was supported by a Proof-of Principle CIHR grant, Genome British Columbia Strategic Opportunities Program, and the PC-STAR Project, which is funded by Prostate Cancer Canada with the support of Safeway. The authors thank Dr. Maia Vinogradova for her assistance in crystallographic experiments and Hong Zheng and Eleanore Hendrickson of Structure-Based Design for their valuable contributions. The determination of the structures of the BF3 binders with the AR has been done by the Structure-Based Design Company (www.strbd.com) as a contract research. We are also grateful to the staff at the Lawrence Berkeley National Laboratory for assistance with X-ray data collection, and we thank Hans Adomat for his considerable assistance conducting the LC/MS analysis.
