In the article by Kim *et al.* that appears in Journal of Microbiology 2012; 50, 354-358. The novel species name *Arenimonas aquaticum* should be changed as *Arenimonas aquatica* because the genus name *Arenimonas* is of the feminine gender. The adjective used as specific epithet must be in the feminine gender as well. In addition, type strain NA-09^T=KACC14663^T should be changed as type strain NA-09^T=KACC14662^T.
