

## Announcement

*Chemistry, energy and the environment 3. Hotel Palácio, Estoril, Portugal, 25–28 May 1997.*

The workshop will cover the modern trends in the development of chemistry for the energy storage and energy conservation processes, and its contribution to environmental protection; alternative options on the central roles to be played by chemistry in the energy industry, and their relevance to society; and several aspects on Energy and New Technologies and Energy and The Environment. The aim is to promote the exchange of information and ideas between scientists in industry, academia and government and to provide a forum for people dealing with these problems from around the world.

*Workshop topics will include:*

- Chemistry – friend or foe of the environment?
- Catalysis in the service of the environment.
- The challenge of the environmentally-friendly production of energy.
- Hydrogen as an energy source.
- Nuclear waste.
- Renewable energy water production processes.
- Energy sources for 2000 and beyond.

- Electrochemical decontaminations.

*Call for papers:* Authors are invited to submit titles of papers covering any of the above topics, and/or related topics. These titles should reach C.A.C. Sequeira, Instituto Superior Técnico, Av. Rovisco Pais, 1096 Lisboa Codex, Portugal.
