JOURNAL OF
MOLECULAR
CATALYSIS
A: CHEMICAL

Subject Index

Ab initio

Quantum chemical study of the electronic structure of the Ni/MoS₂ hydrodesulfurization catalysts (Zakharov, I.I. (119) 437)

Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)

Ab initio calculations

Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)

Structure and relative Lewis acidity of the catalytic sites of an aluminium-modified silica gelA theoretical study (Fraile, J.M. (119) 95)

Ab initio Hartree–Fock

Electric field effects in heterogeneous catalysis (Pacchioni, G. (119) 263)

Ab initio method

Combining ab initio techniques with analytical potential functions. A study of zeolite–adsorbate interactions for NH₃ on H-faujasite (Brändle, M. (119) 19)

Ab initio quantum chemical embedded cluster calculations

Ab initio embedding studies of chemisorption on metal surfaces — interaction of small C–N containing molecules with Ni(111) (Yang, H. (119) 425)

Acetonitrile hydrogenation

Characterization and activity of hydrotalcite-type catalysts for acetonitrile hydrogenation (Medina, F. (119) 201)

Adsorption

Electronic structure and adsorption properties of precious metals and their oxides: Density functional calculations (Broclawik, E. (119) 35)

Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)

A theoretical study of the Na–TiO₂ (001) rutile interaction (Jiménez Calzado, C. (119) 135)

Comparative studies on the adsorption of small molecules at NaCl and MgO surfaces (Jug, K. (119) 143)

Ab initio periodic pseudopotential Hartree–Fock calculations of O₂ dissociation on perfect Si(100) surface (Markovits, A. (119) 185)

Ethylene adsorption on the Cu(111) surface: DFT cluster studies (Michalak, A. (119) 213)

Structure and vibrations of adsorption complexes NH₃/Ru(001): Density functional model cluster studies (Neyman, K.M. (119) 245)

Thermodynamic and ab initio calculations of properties of chemisorbed ions and application to adsorbed sulfur oxide anions (Paredes Olivera, P. (119) 275)

Aggregation

Mechanisms of silicon incorporation in aluminophosphate molecular sieves (Sastre, G. (119) 349)

Alloy

Experimental and theoretical studies of fuel cell catalysts: Density functional theory calculations of H₂ dissociation and CO chemisorption on fuel cell metal dimers (Mitchell, P.C.H. (119) 223)

AlPO₄

Mechanisms of silicon incorporation in aluminophosphate molecular sieves (Sastre, G. (119) 349)

Aluminium-supported silica

Structure and relative Lewis acidity of the catalytic sites of an aluminium-modified silica gelA theoretical study (Fraile, J.M. (119) 95)

Aluminophosphate

Mechanisms of silicon incorporation in aluminophosphate molecular sieves (Sastre, G. (119) 349)

Ammonia

Structure and vibrations of adsorption complexes NH₃/Ru(001): Density functional model cluster studies (Neyman, K.M. (119) 245)

Ammonia adsorption

Combining ab initio techniques with analytical potential functions. A study of zeolite–adsorbate interactions for NH₃ on H-faujasite (Brändle, M. (119) 19)

Atomic charges

Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)

Bader's theory

Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)

Bifunctional catalyst

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

Bonding

Effect of surface relaxation and rumpling on the vibrational spectrum of NO adsorbed on a Cu₂O surface (Fernández-García, M. (119) 87)

n-Butane hydroisomerization

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

Butane isomers

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

- Butene**
Energetics and diffusion of butene isomers in channel zeolites from molecular dynamics simulations (Jousse, F. (119) 165)
- Caesium**
Structural characterization of NiO doped with several caesium loadings (Fernández, R. (119) 77)
- Catalysis**
Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)
- Chabazite**
Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)
- Characterization**
Structural characterization of NiO doped with several caesium loadings (Fernández, R. (119) 77)
- Charge displacement analysis**
Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)
- Chemisorption**
Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)
Dynamical simulations of the oxygen adsorption on the Ag(110) surface (Pazzi, V.I. (119) 289)
Ab initio embedding studies of chemisorption on metal surfaces — interaction of small C–N containing molecules with Ni(111) (Yang, H. (119) 425)
- Cluster models**
Electric field effects in heterogeneous catalysis (Pacchioni, G. (119) 263)
- CO adsorption**
Metal–support interaction: A theoretical approach (Blyholder, G. (119) 11)
- Computer modelling**
Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)
- Computer programs**
Interactive elucidation (without programming) of reaction mechanisms in heterogeneous catalysis (Valdés-Perez, R.E. (119) 405)
- Computer simulation**
Mechanisms of oscillation generation in anodic reactions catalyzed by Ag nanostructures (Ragoisha, G.A. (119) 299)
- Computer simulations**
Dynamical simulations of the oxygen adsorption on the Ag(110) surface (Pazzi, V.I. (119) 289)
- Copper**
Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)
Effect of the Madelung potential in the structure and bonding of metal–oxide systems: Cu on MgO(100) (López, N. (119) 177)
Ethylene adsorption on the Cu(111) surface: DFT cluster studies (Michalak, A. (119) 213)
Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)
- Copper oxide**
Effect of surface relaxation and rumpling on the vibrational spectrum of NO adsorbed on a Cu₂O surface (Fernández-García, M. (119) 87)
- Cyanide, hydrogen cyanide, HCNH, CNH₂ and nickel**
Ab initio embedding studies of chemisorption on metal surfaces — interaction of small C–N containing molecules with Ni(111) (Yang, H. (119) 425)
- Density functional calculations**
Metal–support interaction: A theoretical approach (Blyholder, G. (119) 11)
- Density functional theory**
Proton affinity differences in zeolite: A DFT study (Chandra, A.K. (119) 45)
Experimental and theoretical studies of fuel cell catalysts: Density functional theory calculations of H₂ dissociation and CO chemisorption on fuel cell metal dimers (Mitchell, P.C.H. (119) 223)
- Density functional theory (DFT)**
Fe and B substitution in ZSM-5 zeolites: A quantum-mechanical study (Chatterjee, A. (119) 51)
- Diels–Alder**
Structure and relative Lewis acidity of the catalytic sites of an aluminium-modified silica gel: A theoretical study (Fraile, J.M. (119) 95)
- Diffusion**
Energetics and diffusion of butene isomers in channel zeolites from molecular dynamics simulations (Jousse, F. (119) 165)
- Dissociation**
Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)
- Effective crystal field**
d–d spectra of transition metal oxides by effective crystal field method (Tchougréeff, A.L. (119) 377)
- Electric fields**
Electric field effects in heterogeneous catalysis (Pacchioni, G. (119) 263)
- Electrocatalyst**
Experimental and theoretical studies of fuel cell catalysts: Density functional theory calculations of H₂ dissociation and CO chemisorption on fuel cell metal dimers (Mitchell, P.C.H. (119) 223)
- Electrochemical oxidation**
Mechanisms of oscillation generation in anodic reactions catalyzed by Ag nanostructures (Ragoisha, G.A. (119) 299)
- Electrochemical promotion**
Electric field effects in heterogeneous catalysis (Pacchioni, G. (119) 263)
- Electronic structure**
Role of mixed-valence state in vanadium phosphates catalysts (Robert, V. (119) 327)
- Electronic structures**
Electronic structure and adsorption properties of precious metals and their oxides: Density functional calculations (Broclawik, E. (119) 35)
- Ethane hydrogenolysis**
Interactive elucidation (without programming) of reaction mechanisms in heterogeneous catalysis (Valdés-Perez, R.E. (119) 405)

- Ethene**
Ethylene adsorption on the Cu(111) surface: DFT cluster studies (Michalak, A. (119) 213)
- EXAFS**
In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)
- Extended Hückel calculations**
Cluster size effects in models of the active site for stereospecific heterogeneous Ziegler–Natta polymerization (Mosley, D.H. (119) 235)
- Faujasite**
Combining ab initio techniques with analytical potential functions. A study of zeolite–adsorbate interactions for NH₃ on H-faujasite (Brändle, M. (119) 19)
- Fe and B substitution**
Fe and B substitution in ZSM-5 zeolites: A quantum-mechanical study (Chatterjee, A. (119) 51)
- Fractal dimension**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- Geometrical descriptors**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- Gold**
Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)
- Hartree–Fock**
Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)
- Hartree–Fock periodic calculations**
Ab initio periodic pseudopotential Hartree–Fock calculations of O₂ dissociation on perfect Si(100) surface (Markovits, A. (119) 185)
- H₂ dissociation**
Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)
- HDN**
Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)
- HDS**
Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)
- Heterogeneous catalysis**
Electric field effects in heterogeneous catalysis (Pacchioni, G. (119) 263)
Characterization and catalysis studies of small metal particles on planar model oxide supports (Rainer, D.R. (119) 307)
- Hydrosulfurization**
Quantum chemical study of the electronic structure of the Ni/MoS₂ hydrosulfurization catalysts (Zakharov, I.I. (119) 437)
- Hydrogen**
Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)
- Hydrogen abstraction**
Catalytic properties of F-centres at the magnesium oxide surface: hydrogen abstraction from methane (Orlando, R. (119) 253)
- Hydrogenation reactions**
Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)
- Hydrogen sulfide adsorption**
Quantum chemical study of the electronic structure of the Ni/MoS₂ hydrosulfurization catalysts (Zakharov, I.I. (119) 437)
- Hydroxylation**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- In situ**
In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)
- Interfaces**
Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)
- Lattice–gas model**
Monte Carlo simulations of oscillations (Jansen, A.P.J. (119) 125)
- Madelung potential**
Effect of the Madelung potential in the structure and bonding of metal–oxide systems: Cu on MgO(100) (López, N. (119) 177)
d–d spectra of transition metal oxides by effective crystal field method (Tchougréeff, A.L. (119) 377)
- Magnesium oxide**
Comparative studies on the adsorption of small molecules at NaCl and MgO surfaces (Jug, K. (119) 143)
Effect of the Madelung potential in the structure and bonding of metal–oxide systems: Cu on MgO(100) (López, N. (119) 177)
Structure of a mononuclear Rhenium catalyst supported on MgO: An ab initio study (Márquez, A.M. (119) 195)
Catalytic properties of F-centres at the magnesium oxide surface: hydrogen abstraction from methane (Orlando, R. (119) 253)
- Manganese oxide**
Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)
- Mechanical embedding**
Combining ab initio techniques with analytical potential functions. A study of zeolite–adsorbate interactions for NH₃ on H-faujasite (Brändle, M. (119) 19)
- MECHEM**
Interactive elucidation (without programming) of reaction mechanisms in heterogeneous catalysis (Valdés-Perez, R.E. (119) 405)
- Metal particles**
Characterization and catalysis studies of small metal particles on planar model oxide supports (Rainer, D.R. (119) 307)
- Metal–support interaction**
Metal–support interaction: A theoretical approach (Blyholder, G. (119) 11)

Methane

Charge displacement analysis: A new general method to estimate atomic charges in molecules and clusters (Bagus, P.S. (119) 3)

Electronic structure and adsorption properties of precious metals and their oxides: Density functional calculations (Broclawik, E. (119) 35)

Catalytic properties of F-centres at the magnesium oxide surface: hydrogen abstraction from methane (Orlando, R. (119) 253)

Microporous solids

Designing templates for the synthesis of microporous solids using de novo molecular design methods (Willock, D.J. (119) 415)

Mixed-valence

Role of mixed-valence state in vanadium phosphates catalysts (Robert, V. (119) 327)

Model Hamiltonians

Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)

Model supported catalyst

Characterization and catalysis studies of small metal particles on planar model oxide supports (Rainer, D.R. (119) 307)

Molecular dynamics

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

Molecular orbital calculations

Quantum chemical study of the electronic structure of the Ni/MoS₂ hydrodesulfurization catalysts (Zakharov, I.I. (119) 437)

Molecular sieves

Mechanisms of silicon incorporation in aluminophosphate molecular sieves (Sastre, G. (119) 349)

Molybdenum disulfide

Quantum chemical study of the electronic structure of the Ni/MoS₂ hydrodesulfurization catalysts (Zakharov, I.I. (119) 437)

Molybdenum sulphide

Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)

Monte Carlo

Monte Carlo simulations of oscillations (Jansen, A.P.J. (119) 125)

Monte Carlo simulation

Two simple models for computer simulation of self-assembled monolayers (Grunze, M. (119) 113)

Monte Carlo study

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

Multipole moments

Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)

Net charges

Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)

Nickel

Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)

Nickel catalyst

Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)

Nickel catalysts

Structural characterization of NiO doped with several caesium loadings (Fernández, R. (119) 77)

Characterization and activity of hydrotalcite-type catalysts for acetonitrile hydrogenation (Medina, F. (119) 201)

Nitric oxide

Effect of surface relaxation and rumpling on the vibrational spectrum of NO adsorbed on a Cu₂O surface (Fernández-García, M. (119) 87)

Olefin polymerization

Cluster size effects in models of the active site for stereospecific heterogeneous Ziegler-Natta polymerization (Mosley, D.H. (119) 235)

Oscillatory reactions

Monte Carlo simulations of oscillations (Jansen, A.P.J. (119) 125)

Oxidation

Ab initio periodic pseudopotential Hartree-Fock calculations of O₂ dissociation on perfect Si(100) surface (Markovits, A. (119) 185)

Oxide films

Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)

Palladium

Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)

Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)

Palladium oxide

Electronic structure and adsorption properties of precious metals and their oxides: Density functional calculations (Broclawik, E. (119) 35)

Partition coefficient

Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)

Periodic

Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)

Phase behavior

Two simple models for computer simulation of self-assembled monolayers (Grunze, M. (119) 113)

Platinum

Experimental and theoretical studies of fuel cell catalysts: Density functional theory calculations of H₂ dissociation and CO chemisorption on fuel cell metal dimers (Mitchell, P.C.H. (119) 223)

Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)

Platinum clusters

Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)

- Polarizability**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- Porphyrin**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- Potential oscillation**
Mechanisms of oscillation generation in anodic reactions catalyzed by Ag nanostructures (Ragoisha, G.A. (119) 299)
- Probing depth**
In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)
- Proton affinity**
Proton affinity differences in zeolite: A DFT study (Chandra, A.K. (119) 45)
- Reaction mechanisms**
Interactive elucidation (without programming) of reaction mechanisms in heterogeneous catalysis (Valdés-Perez, R.E. (119) 405)
- Reactive dynamics**
Dynamical simulations of the oxygen adsorption on the Ag(110) surface (Pazzi, V.I. (119) 289)
- Reduction**
A theoretical study of the Na–TiO₂ (001) rutile interaction (Jiménez Calzado, C. (119) 135)
- Rhenium**
Structure of a mononuclear Rhenium catalyst supported on MgO: An ab initio study (Márquez, A.M. (119) 195)
- Rhodium gem-dicarbonyl**
Metal–support interaction: A theoretical approach (Blyholder, G. (119) 11)
- Rhodium oxide**
Electronic structure and adsorption properties of precious metals and their oxides: Density functional calculations (Broclawik, E. (119) 35)
- Ruthenium**
Structure and vibrations of adsorption complexes NH₃/Ru(001): Density functional model cluster studies (Neyman, K.M. (119) 245)
- Rutile**
A theoretical study of the Na–TiO₂ (001) rutile interaction (Jiménez Calzado, C. (119) 135)
- Self-assembled monolayers**
Two simple models for computer simulation of self-assembled monolayers (Grunze, M. (119) 113)
- Semiempirical methods**
Model parametric Hamiltonians and bonding theoretical tools in simulation of catalytic reaction steps. Hydrotreatment of oil components (Ruetter, F. (119) 335)
- SEXAFS**
In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)
- Shell model potential**
Combining ab initio techniques with analytical potential functions. A study of zeolite–adsorbate interactions for NH₃ on H-faujasite (Brändle, M. (119) 19)
- Silicon**
Ab initio periodic pseudopotential Hartree–Fock calculations of O₂ dissociation on perfect Si(100) surface (Markovits, A. (119) 185)
- Silicon incorporation**
Mechanisms of silicon incorporation in aluminophosphate molecular sieves (Sastre, G. (119) 349)
- Silver**
Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)
- Sodium**
A theoretical study of the Na–TiO₂ (001) rutile interaction (Jiménez Calzado, C. (119) 135)
- Sodium chloride**
Comparative studies on the adsorption of small molecules at NaCl and MgO surfaces (Jug, K. (119) 143)
- Solid Lewis acid**
Structure and relative Lewis acidity of the catalytic sites of an aluminium-modified silica gel: A theoretical study (Fraile, J.M. (119) 95)
- Solubility**
Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)
- Sorption simulations**
Structure and initial interaction of butane and butane isomers in a Pt/H-mordenite catalyst (Grillo, M.E. (119) 105)
- Sticking**
Dynamical simulations of the oxygen adsorption on the Ag(110) surface (Pazzi, V.I. (119) 289)
- Sulfur oxide**
Thermodynamic and ab initio calculations of properties of chemisorbed ions and application to adsorbed sulfur oxide anions (Paredes Olivera, P. (119) 275)
- Sulfur oxides**
Chemistry of sulfur oxides on transition metal surfaces: BOC-MP analysis (Sellers, H. (119) 367)
- Supported oxides**
Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)
- Surface**
Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)
- Surface reactions**
Mechanisms of oscillation generation in anodic reactions catalyzed by Ag nanostructures (Ragoisha, G.A. (119) 299)
- Surface science**
Characterization and catalysis studies of small metal particles on planar model oxide supports (Rainer, D.R. (119) 307)
- Surface structure**
Supported oxide overlayers: A link between macroscopic and microscopic properties (Corà, F. (119) 57)
- Takovite catalysts**
Characterization and activity of hydrotalcite-type catalysts for acetonitrile hydrogenation (Medina, F. (119) 201)
- Template molecules**
Designing templates for the synthesis of microporous solids using de novo molecular design methods (Willock, D.J. (119) 415)

Thermodynamics

Thermodynamic and ab initio calculations of properties of chemisorbed ions and application to adsorbed sulfur oxide anions (Paredes Olivera, P. (119) 275)

TiCl₃

Cluster size effects in models of the active site for stereospecific heterogeneous Ziegler–Natta polymerization (Mosley, D.H. (119) 235)

Titanium

Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)

Topological indices

Theoretical characterization of iron and manganese porphyrins for catalyzed saturated alkane hydroxylations (Torrens, F. (119) 393)

Total electron yield

In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)

Transition-metal

Dissociative adsorption of H₂ on the Pd(111) surface (Dong, W. (119) 69)

Transition metal oxides

d–d spectra of transition metal oxides by effective crystal field method (Tchougréeff, A.L. (119) 377)

Vanadyl pyrophosphate

Role of mixed-valence state in vanadium phosphates catalysts (Robert, V. (119) 327)

Vibrational spectrum

Effect of surface relaxation and rumpling on the vibrational spectrum of NO adsorbed on a Cu₂O surface (Fernández-García, M. (119) 87)

Vibrations

Structure and vibrations of adsorption complexes NH₃/Ru(001): Density functional model cluster studies (Neyman, K.M. (119) 245)

XAFS

In situ probing of the near-surface properties of heterogeneous catalysts under reaction conditions: An introduction to total electron-yield XAS (Schroeder, S.L.M. (119) 357)

Zeolite

Proton affinity differences in zeolite: A DFT study (Chandra, A.K. (119) 45)

Zeolites

Energetics and diffusion of butene isomers in channel zeolites from molecular dynamics simulations (Jousse, F. (119) 165)

Designing templates for the synthesis of microporous solids using de novo molecular design methods (Willock, D.J. (119) 415)

Periodic ab initio study of the oxidizing sites in Ti-containing zeolites (Zicovich-Wilson, C. (119) 449)

Ziegler–Natta catalysis

Cluster size effects in models of the active site for stereospecific heterogeneous Ziegler–Natta polymerization (Mosley, D.H. (119) 235)

ZSM-5

Fe and B substitution in ZSM-5 zeolites: A quantum-mechanical study (Chatterjee, A. (119) 51)
