

Subject index

Ab-initio calculation

Analysis of the ab-initio force-fields of the polyatomic molecules followed by solution of the inverse spectral problem (Baltakhinov, V.P. (158) 399)

Ab initio calculations

On the problem of differentiation of acetone adsorption species on the silica gel: molecular models of adsorption complexes (Kachurovskaya, N.A. (158) 281)

Quantum-chemical investigation of Cu-containing catalysts for C–Cl bond metathesis (Smirnov, V.V. (158) 487)

Acceptor sites

Development of an ESR technique for testing sulfated zirconia catalysts (Bedilo, A.F. (158) 409)

Acetone

On the problem of differentiation of acetone adsorption species on the silica gel: molecular models of adsorption complexes (Kachurovskaya, N.A. (158) 281)

Acid

Investigation of acid–base sites on the surface of electrochemically synthesized aluminum oxides (Lamberov, A.A. (158) 475)

Adjusted sorbents

Oxidation of L-cysteine in oxygen-saturated aqueous solution in the presence of Cu(II)-containing adjusted polymers (Men'shikov, S.Yu. (158) 447)

Adsorption

Adsorbate dynamics on iron oxide surfaces studied by scanning tunneling microscopy (Shaikhutdinov, Sh. (158) 129)

On the problem of differentiation of acetone adsorption species on the silica gel: molecular models of adsorption complexes (Kachurovskaya, N.A. (158) 281)

Investigation of the mechanism of water transfer in catalysts and adsorbents (Yazykov, N.A. (158) 467)

Adsorption mechanisms

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

AES

XPS study of carbon species at the surface of platinum single crystal planes (Kvon, R.I. (158) 297)

Alcohol oxidation

Platinum catalysed aqueous alcohol oxidation: experimental studies and reaction model discrimination (Markusse, A.P. (158) 215)

Physicochemical study of active sites of metal catalysts for alcohol partial oxidation (Pestryakov, A.N. (158) 325)

Alkanes

Diffusion of linear and branched alkanes in ZSM-5. A quasi-elastic neutron scattering study (Jobic, H. (158) 135)

Hydrocarbon conversion on ZSM-5 in the presence of N₂O: relative reactivity and routes of product formation studied by GC-MS and ¹³C NMR (Vereshchagin, S.N. (158) 377)

Alloy

Symmetric twisted carbon filaments formed from butadiene-1,3 on Ni–Cu/MgO-catalyst: growth regularities and mechanism (Chesnokov, V.V. (158) 267)

²⁷Al MAS NMR

Highly-ordered aluminosilicate mesoporous mesophase materials: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)

²⁷Al MAS NMR study of the interaction of supported Ziegler–Natta catalysts with organoaluminium co-catalyst in the presence of donors (Potapov, A.G. (158) 457)

Aluminum chloride

Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)

Aluminum oxide

Investigation of acid–base sites on the surface of electrochemically synthesized aluminum oxides (Lamberov, A.A. (158) 475)

Amorphous materials

Modeling of the curve radial electronic density distribution for amorphous Me–Zr–O systems (Moroz, E.M. (158) 313)

Antimony oxide

Raman studies of supported V, Cr and Sb oxides and their mechanical mixture with α -Bi₂Mo₃O₁₂ (Cortés Corberán, V. (158) 271)

Appearance potential spectroscopy

Electronic properties of Pt(100) single crystal surface: experimental study and theoretical calculations (Cholach, A.R. (158) 181)

Autowaves

The role of subsurface oxygen in oscillatory behaviour of CO + O₂ reaction over Pd metal catalysts: Monte Carlo model (Latkin, E.I. (158) 161)

Base

Investigation of acid–base sites on the surface of electrochemically synthesized aluminum oxides (Lamberov, A.A. (158) 475)

- Batch-like**
In situ MAS NMR spectroscopy study of catalytic reaction mechanisms (Derouane, E.G. (158) 5)
- BEA zeolite**
Mechanistic study of SCR-NO with methane over Pd-loaded BEA zeolite (Park, Y.-K. (158) 173)
- Benzene**
Unusual manifestation of benzene radical cations in ESR spectra on sulfated zirconia (Bedilo, A.F. (158) 405)
- Benzene alkylation**
Highly-ordered aluminosilicate mesoporous mesophase materials: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)
- Benzene oxidation**
Active metal species assembled with heteropoly tungstate anion $PW_9O_{34}^{9-}$ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)
- α - $Bi_2Mo_3O_{12}$
Raman studies of supported V, Cr and Sb oxides and their mechanical mixture with α - $Bi_2Mo_3O_{12}$ (Cortés Corberán, V. (158) 271)
- Biphenyl**
Unusual manifestation of benzene radical cations in ESR spectra on sulfated zirconia (Bedilo, A.F. (158) 405)
- Brønsted acid catalyst**
Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over $Re_2O_7-Al_2O_3$ metathesis catalyst (Kawai, T. (158) 533)
- n*-Butane isomerization
Development of an ESR technique for testing sulfated zirconia catalysts (Bedilo, A.F. (158) 409)
- Butane oxidation to maleic anhydride**
Vanadyl hydrogenphosphate sesquihydrate as a precursor for preparation of $(VO)_2P_2O_7$ and cobalt-incorporated catalysts (Ishimura, T. (158) 559)
- Carbon**
Symmetric twisted carbon filaments formed from butadiene-1,3 on Ni-Cu/MgO-catalyst: growth regularities and mechanism (Chesnokov, V.V. (158) 267)
- Carbon deposits**
Physicochemical investigation of the copper and silver catalysts of the ethylene glycol oxidation (Vodyankina, O.V. (158) 381)
- Carbon fiber**
XPS and TEM study of new carbon material: N-containing catalytic filamentous carbon (Kvon, R.I. (158) 413)
- Carbon filaments**
Catalytic synthesis of carbon nanostructures from polymer precursors (Maksimova, N.I. (158) 301)
- Carbon nanotubes**
Catalytic synthesis of carbon nanostructures from polymer precursors (Maksimova, N.I. (158) 301)
- Catalysis**
Model studies of catalysis with microstructured bimetallic surfaces (Imbihl, R. (158) 101)
- Platinum catalysed aqueous alcohol oxidation: experimental studies and reaction model discrimination (Markusse, A.P. (158) 215)
- Quantum-chemical investigation of Cu-containing catalysts for C-Cl bond metathesis (Smirnov, V.V. (158) 487)
- Catalysis by solid acid**
Synthesis and study of acid catalyst 30% WO_3/SnO_2 (Maksimov, G.M. (158) 435)
- Catalysis, mechanism**
Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)
- Catalyst**
EPR for catalysts based on nickel and cobalt complexes (Saraev, V.V. (158) 149)
- Synthesis and study of palladium colloids and related catalysts (Troitski, S.Yu. (158) 461)
- Catalysts**
Stoichiography as applied to studying composition and real structure of catalysts (Malakhov, V.V. (158) 143)
- Catalytic decomposition**
Catalytic synthesis of carbon nanostructures from polymer precursors (Maksimova, N.I. (158) 301)
- Catalytic reaction**
Infrared spectroscopy to study the mechanism of catalytic reaction on molecular scale from diffusion to limiting stage kinetics (Paukshtis, E.A. (158) 37)
- Catalytic reaction mechanisms**
Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Catalytic reduction**
Catalytic reduction of nitrate and nitrite ions by hydrogen: investigation of the reaction mechanism over Pd and Pd-Cu catalysts (Ilinitch, O.M. (158) 237)
- Cation ordering**
IR spectroscopic investigation of cation distribution in Zn-Co oxide catalysts with spinel type structure (Kustova, G.N. (158) 293)
- Cenosphere**
Physicochemical and catalytic properties of glass crystal catalysts for the oxidation of methane (Anshits, A.G. (158) 209)
- Characterization by EXAFS, FT-IR and STM**
Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Chemisorption**
Oxygen adsorption on the Ag(111) surface: a quantum chemical study by the NDDO/MC method (Milov, M.A. (158) 309)
- Structural transformations in overlayer and sticking probability during chemisorption: oxygen on (100) surface of metals (Salanov, A.N. (158) 367)
- Chromium oxide**
Raman studies of supported V, Cr and Sb oxides and their mechanical mixture with α - $Bi_2Mo_3O_{12}$ (Cortés Corberán, V. (158) 271)
- Cobalt**
EPR for catalysts based on nickel and cobalt complexes (Saraev, V.V. (158) 149)
- Cobalt carbide**
Role of the Cu-Co alloy and cobalt carbide in higher alcohol synthesis (Volkova, G.G. (158) 389)

- Cobalt-intercalated vanadyl hydrogenphosphate sesquihydrate
Vanadyl hydrogenphosphate sesquihydrate as a precursor for preparation of $(VO)_2P_2O_7$ and cobalt-incorporated catalysts (Ishimura, T. (158) 559)
- Complex
EPR for catalysts based on nickel and cobalt complexes (Saraev, V.V. (158) 149)
Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)
- Composition and real structure
Stoichiography as applied to studying composition and real structure of catalysts (Malakhov, V.V. (158) 143)
- Computer simulations
Structural transformations in overlayer and sticking probability during chemisorption: oxygen on (100) surface of metals (Salanov, A.N. (158) 367)
- Contact
Investigation of the mechanism of water transfer in catalysts and adsorbents (Yazykov, N.A. (158) 467)
- Contact potential difference
Mechanistic insights in the activation of oxygen on oxide catalysts for the oxidative dehydrogenation of ethane from pulse experiments and contact potential difference measurements (Kondratenko, E.V. (158) 199)
- Continuous-flow
In situ MAS NMR spectroscopy study of catalytic reaction mechanisms (Derouane, E.G. (158) 5)
- CO oxidation
Study of H_2 , O_2 , CO adsorption and $CO + O_2$ reaction on Pt(100), Pd(110) monocrystal surfaces (Gorodetskii, V.V. (158) 155)
The role of subsurface oxygen in oscillatory behaviour of $CO + O_2$ reaction over Pd metal catalysts: Monte Carlo model (Latkin, E.I. (158) 161)
- Copper
Symmetric twisted carbon filaments formed from butadiene-1,3 on Ni–Cu/MgO-catalyst: growth regularities and mechanism (Chesnokov, V.V. (158) 267)
Physicochemical study of active sites of metal catalysts for alcohol partial oxidation (Pestryakov, A.N. (158) 325)
Physicochemical investigation of the copper and silver catalysts of the ethylene glycol oxidation (Vodyankina, O.V. (158) 381)
- Copper chromite
Structure transformations of copper chromite under reduction–reoxidation conditions (Plyasova, L.M. (158) 331)
- Copper complexes
Quantum-chemical investigation of Cu-containing catalysts for C–Cl bond metathesis (Smirnov, V.V. (158) 487)
- Cross-linked polymers
Hydrogenation reactions catalysed by a supported palladium complex (Dell'Anna, M.M. (158) 515)
- Cs–O complexes
XPS, TPD and TPR studies of Cs–O complexes on silver: their role in ethylene epoxidation (Podgornov, E.A. (158) 337)
- C–Cl bond metathesis
Quantum-chemical investigation of Cu-containing catalysts for C–Cl bond metathesis (Smirnov, V.V. (158) 487)
- Cu–Co alloy
Role of the Cu–Co alloy and cobalt carbide in higher alcohol synthesis (Volkova, G.G. (158) 389)
- Cu–Co based catalyst
Role of the Cu–Co alloy and cobalt carbide in higher alcohol synthesis (Volkova, G.G. (158) 389)
- Cu(II)-containing catalysts
Oxidation of L-cysteine in oxygen-saturated aqueous solution in the presence of Cu(II)-containing adjusted polymers (Men'shikov, S.Yu. (158) 447)
- D_2
Effect of NO on D_2 adsorption on the Pt(100)–(hex) surface (Vovk, E.I. (158) 395)
- Deactivation
Platinum catalysed aqueous alcohol oxidation: experimental studies and reaction model discrimination (Markuske, A.P. (158) 215)
- Deep oxidation
Physicochemical and catalytic properties of glass crystal catalysts for the oxidation of methane (Anshits, A.G. (158) 209)
- Defects
Role of defect structure in structural sensitivity of the oxidation reactions catalyzed by dispersed transition metal oxides (Sadykov, V.A. (158) 361)
- Density functional calculations
Olefin epoxidation by mono and bisperoxo complexes of Mo(VI): a density functional model study (Yudanov, I.V. (158) 189)
- Design of active structures
Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Deuterium adsorption
Effect of NO on D_2 adsorption on the Pt(100)–(hex) surface (Vovk, E.I. (158) 395)
- Diamond
XPS study of carbon species at the surface of platinum single crystal planes (Kvon, R.I. (158) 297)
- Diffusion
Infrared spectroscopy to study the mechanism of catalytic reaction on molecular scale from diffusion to limiting stage kinetics (Paukshtis, E.A. (158) 37)
Model studies of catalysis with microstructured bimetallic surfaces (Imbihl, R. (158) 101)
Diffusion of linear and branched alkanes in ZSM-5. A quasi-elastic neutron scattering study (Jobic, H. (158) 135)
- Diffusion and migration
Oxygen adsorption on the Ag(111) surface: a quantum chemical study by the NDDO/MC method (Milov, M.A. (158) 309)
- Dimerization
Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over $Re_2O_7-Al_2O_3$ metathesis catalyst (Kawai, T. (158) 533)
- Distortion
Distortion of MoS_2 host layers in intercalation compounds with various guest species: correlation with charge transfer (Zubavichus, Ya.V. (158) 231)

Drying

Investigation of the mechanism of water transfer in catalysts and adsorbents (Yazykov, N.A. (158) 467)

Electrochemistry

Platinum catalysed aqueous alcohol oxidation: experimental studies and reaction model discrimination (Markusse, A.P. (158) 215)

Electron density, Excitation spectra calculations

Electronic properties of Pt(100) single crystal surface: experimental study and theoretical calculations (Cholach, A.R. (158) 181)

Electron microscopy

New methods for determining surface structures (Marks, L.D. (158) 85)

Electron–solid interactions

Electronic properties of Pt(100) single crystal surface: experimental study and theoretical calculations (Cholach, A.R. (158) 181)

Epitaxial films

Adsorbate dynamics on iron oxide surfaces studied by scanning tunneling microscopy (Shaikhutdinov, Sh. (158) 129)

Epoxidation

Olefin epoxidation by mono and bisperoxo complexes of Mo(VI): a density functional model study (Yudanov, I.V. (158) 189)

EPR

EPR for catalysts based on nickel and cobalt complexes (Saraev, V.V. (158) 149)

ESR

Unusual manifestation of benzene radical cations in ESR spectra on sulfated zirconia (Bedilo, A.F. (158) 405)

Development of an ESR technique for testing sulfated zirconia catalysts (Bedilo, A.F. (158) 409)

Oxidation of L-cysteine in oxygen-saturated aqueous solution in the presence of Cu(II)-containing adjusted polymers (Men'shikov, S.Yu. (158) 447)

Ethanol oxidation

Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)

Ethylene epoxidation

XPS, TPD and TPR studies of Cs–O complexes on silver: their role in ethylene epoxidation (Podgornov, E.A. (158) 337)

Ethylene polymerization

Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelectron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)

EXAFS

Distortion of MoS₂ host layers in intercalation compounds with various guest species: correlation with charge transfer (Zubavichus, Ya.V. (158) 231)

The determination of adsorption site structures of high dispersed oxides by EXAFS spectroscopy using molecules as probe (Kriventsov, V.V. (158) 287)

Extra-framework species

FTIR and UV–Vis characterization of Fe-Silicalite (Spoto, G. (158) 107)

Fe-containing catalysts

XPS study of the silica-supported Fe-containing catalysts for deep or partial H₂S oxidation (Bukhtiyarova, G.A. (158) 251)

Fe oxide

Investigation of the structure of protohematite — metastable phase of ferrum (III) oxide (Burgina, E.B. (158) 257)

Fe-Silicalite

FTIR and UV–Vis characterization of Fe-Silicalite (Spoto, G. (158) 107)

Filament

Symmetric twisted carbon filaments formed from butadiene-1,3 on Ni–Cu/MgO-catalyst: growth regularities and mechanism (Chesnokov, V.V. (158) 267)

Force constants

Analysis of the ab-initio force-fields of the polyatomic molecules followed by solution of the inverse spectral problem (Baltakhinov, V.P. (158) 399)

Formaldehyde

Determination of surface intermediates during the selective oxidation of formaldehyde over V–Ti–O catalyst by in situ FTIR spectroscopy (Popova, G.Ya. (158) 345)

Formic acid

Thiol protected platinum black and palladium black catalysts in oxidation catalysis (Berezin, M.Yu. (158) 567)

Framework zirconium phosphates

The novel acid catalysts — framework zirconium phosphates: the bulk and surface structure (Pavlova, S.N. (158) 319)

FTIR

FTIR and UV–Vis characterization of Fe-Silicalite (Spoto, G. (158) 107)

FTIRS

FTIRS study of the nature and reactivity of the products of nitromethane transformation on the surface of copper- and cobalt-exchanged ZSM-5 zeolites as related to the mechanism of NO_x CH₄-SCR (Beloshapkin, S.A. (158) 355)

Full-profile analysis

Simulation of X-ray powder diffraction patterns for low-ordered materials (Cherepanova, S.V. (158) 263)

Gas phase radicals

The radicals generation in the methanol oxidation on a Pt-containing catalysts. Influence of support acidic properties (Malakhova, I.V. (158) 439)

Glyoxal synthesis

Physicochemical investigation of the copper and silver catalysts of the ethylene glycol oxidation (Vodyankina, O.V. (158) 381)

Gold

Physicochemical study of active sites of metal catalysts for alcohol partial oxidation (Pestryakov, A.N. (158) 325)

Graphite

XPS study of carbon species at the surface of platinum single crystal planes (Kvon, R.I. (158) 297)

Halogen-substituted methanes

Analysis of the ab-initio force-fields of the polyatomic molecules followed by solution of the inverse spectral problem (Baltakhinov, V.P. (158) 399)

HCOOD dehydrogenation

Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)

Heat treatment

An investigation of the effects of Cu^{2+} and heat treatment on TiO_2 photooxidation of certain pyrimidines (Dhananjayan, M.R. (158) 577)

Hematite

Investigation of the structure of protohematite — metastable phase of ferrum (III) oxide (Burgina, E.B. (158) 257)

Heterogeneous hydrogenation

Hydrogenation reactions catalysed by a supported palladium complex (Dell'Anna, M.M. (158) 515)

Heteropoly acids

Redox potentials of molybdovanadophosphoric heteropoly acids in aqueous solutions (Odyakov, V.F. (158) 453)

Heteropolycomplexes

Active metal species assembled with heteropoly tungstate anion $\text{PW}_9\text{O}_{34}^{9-}$ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)

Hexachloroplatinate

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

Higher alcohol synthesis

Role of the Cu–Co alloy and cobalt carbide in higher alcohol synthesis (Volkova, G.G. (158) 389)

 H_2S oxidation

XPS study of the silica-supported Fe-containing catalysts for deep or partial H_2S oxidation (Bukhtiyarova, G.A. (158) 251)

Hydrocarbon oxidation

Phororedox and photocatalytic processes on Fe(III)–porphyrin surface modified nanocrystalline TiO_2 (Molinari, A. (158) 521)

Hydroformylation

The effects of process variables in the hydroformylation of methyl methacrylate with the in situ formed (*o*-thiomethylphenyl)diphenylphosphine rhodium complex (Reinius, H.K. (158) 499)

Hydrogen

Structure transformations of copper chromite under reduction–reoxidation conditions (Plyasova, L.M. (158) 331)

Hydrogenation

Homogeneous hydrogenation of olefins catalyzed by a novel tetrarhodium(II) complex as precursor in aqueous solution (Yang, Z. (158) 509)

Hydrogen peroxide

Kinetics and mechanism of thioether oxidation with H_2O_2 in the presence of Ti(IV)-substituted heteropolytungstates (Kholdeeva, O.A. (158) 223)

Hydrothermal treatment

The novel acid catalysts — framework zirconium phosphates: the bulk and surface structure (Pavlova, S.N. (158) 319)

Infrared diffusion reflectance spectroscopy

Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelectron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)

Infrared spectroscopy

Infrared spectroscopy to study the mechanism of catalytic reaction on molecular scale from diffusion to limiting stage kinetics (Paukshtis, E.A. (158) 37)

In situ XRD

Role of the Cu–Co alloy and cobalt carbide in higher alcohol synthesis (Volkova, G.G. (158) 389)

Intercalation compounds

Distortion of MoS_2 host layers in intercalation compounds with various guest species: correlation with charge transfer (Zubavichus, Ya.V. (158) 231)

Iron oxide

Adsorbate dynamics on iron oxide surfaces studied by scanning tunneling microscopy (Shaikhutdinov, Sh. (158) 129)

Iron–porphyrin

Phororedox and photocatalytic processes on Fe(III)–porphyrin surface modified nanocrystalline TiO_2 (Molinari, A. (158) 521)

IR spectra

IR spectroscopic investigation of cation distribution in Zn–Co oxide catalysts with spinel type structure (Kustova, G.N. (158) 293)

IR spectroscopy

Determination of surface intermediates during the selective oxidation of formaldehyde over V–Ti–O catalyst by in situ FTIR spectroscopy (Popova, G.Ya. (158) 345)

Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)

Isomerization

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over Re_2O_7 – Al_2O_3 metathesis catalyst (Kawai, T. (158) 533)

Kinetics

Kinetics and mechanism of thioether oxidation with H_2O_2 in the presence of Ti(IV)-substituted heteropolytungstates (Kholdeeva, O.A. (158) 223)

L-cysteine

Oxidation of L-cysteine in oxygen-saturated aqueous solution in the presence of Cu(II)-containing adjusted polymers (Men'shikov, S.Yu. (158) 447)

Lewis acid

Quantum-chemical investigation of the formation of Lewis acid centers of high-siliceous zeolites (Lamberov, A.A. (158) 481)

Lewis acid catalyst

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over Re_2O_7 – Al_2O_3 metathesis catalyst (Kawai, T. (158) 533)

Low index single crystal surfaces

Electronic properties of Pt(100) single crystal surface: experimental study and theoretical calculations (Cholach, A.R. (158) 181)

Low temperature

Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)

MAS NMR spectroscopy

In situ MAS NMR spectroscopy study of catalytic reaction mechanisms (Derouane, E.G. (158) 5)

MCM-41

Highly-ordered aluminosilicate mesoporous mesophase materials: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)

Mechanism

Kinetics and mechanism of thioether oxidation with H_2O_2 in the presence of Ti(IV)-substituted heteropolytungstates (Kholdeeva, O.A. (158) 223)

Mechanism of NO_x reduction by methane

FTIRS study of the nature and reactivity of the products of nitromethane transformation on the surface of copper- and cobalt-exchanged ZSM-5 zeolites as related to the mechanism of NO_x CH_4 -SCR (Beloshapkin, S.A. (158) 355)

Mechanochemical activation

The novel acid catalysts — framework zirconium phosphates: the bulk and surface structure (Pavlova, S.N. (158) 319)

Mesoporous mesophase catalysts

Alkene and thioether oxidations with H_2O_2 over Ti-containing mesoporous mesophase catalysts (Kholdeeva, O.A. (158) 417)

Mesoporous mesophase materials

Highly-ordered aluminosilicate mesoporous mesophase materials: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)

Metal catalyst

Catalytic reduction of nitrate and nitrite ions by hydrogen: investigation of the reaction mechanism over Pd and Pd–Cu catalysts (Ilinitch, O.M. (158) 237)

Metal catalysts

Physicochemical study of active sites of metal catalysts for alcohol partial oxidation (Pestryakov, A.N. (158) 325)

Metallacyclopentane mechanism

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over Re_2O_7 – Al_2O_3 metathesis catalyst (Kawai, T. (158) 533)

Metallocenes

Ethylene and hydrogen effects in propylene polymerization with 2-aryllindenyl zirconocenes (Lin, S. (158) 423)

Metathesis

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over Re_2O_7 – Al_2O_3 metathesis catalyst (Kawai, T. (158) 533)

Methane

Mechanistic study of SCR-NO with methane over Pd-loaded BEA zeolite (Park, Y.-K. (158) 173)

Physicochemical and catalytic properties of glass crystal catalysts for the oxidation of methane (Anshits, A.G. (158) 209)

XPS and TEM study of new carbon material: N-containing catalytic filamentous carbon (Kvon, R.I. (158) 413)

Methanol oxidation

The radicals generation in the methanol oxidation on a Pt-containing catalysts. Influence of support acidic properties (Malakhova, I.V. (158) 439)

2-Methyl-1-alkene, 2-methyl-2-alkene

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid cata-

lysts: anomalous reaction behaviors of 2-methyl-1-alkenes over Re_2O_7 – Al_2O_3 metathesis catalyst (Kawai, T. (158) 533)

Methyl methacrylate

The effects of process variables in the hydroformylation of methyl methacrylate with the in situ formed (*o*-thiomethylphenyl)diphenylphosphine rhodium complex (Reinius, H.K. (158) 499)

Microsphere

Physicochemical and catalytic properties of glass crystal catalysts for the oxidation of methane (Anshits, A.G. (158) 209)

Microstrains

Simulation of X-ray powder diffraction patterns for low-ordered materials (Cherepanova, S.V. (158) 263)

Microstructured bimetallic surfaces

Model studies of catalysis with microstructured bimetallic surfaces (Imbihl, R. (158) 101)

Mixed oxide catalysts

Mechanistic insights in the activation of oxygen on oxide catalysts for the oxidative dehydrogenation of ethane from pulse experiments and contact potential difference measurements (Kondratenko, E.V. (158) 199)

Modelling of oxygen adsorption

Mechanistic insights in the activation of oxygen on oxide catalysts for the oxidative dehydrogenation of ethane from pulse experiments and contact potential difference measurements (Kondratenko, E.V. (158) 199)

Molecular scale

Infrared spectroscopy to study the mechanism of catalytic reaction on molecular scale from diffusion to limiting stage kinetics (Paukshtis, E.A. (158) 37)

Molybdenum

Olefin epoxidation by mono and bisperoxo complexes of Mo(VI): a density functional model study (Yudanov, I.V. (158) 189)

Molybdenum disulfide

Distortion of MoS_2 host layers in intercalation compounds with various guest species: correlation with charge transfer (Zubavichus, Ya.V. (158) 231)

Molybdovanadophosphates

Redox potentials of molybdovanadophosphoric heteropoly acids in aqueous solutions (Odyakov, V.F. (158) 453)

Monte Carlo

Percolation diffusion of guest molecules in NaCaA zeolites: field gradient NMR studies and Monte Carlo simulations (Vasnikov, S. (158) 373)

Monte Carlo model

The role of subsurface oxygen in oscillatory behaviour of $\text{CO} + \text{O}_2$ reaction over Pd metal catalysts: Monte Carlo model (Latkin, E.I. (158) 161)

NaCaA zeolite

Percolation diffusion of guest molecules in NaCaA zeolites: field gradient NMR studies and Monte Carlo simulations (Vasnikov, S. (158) 373)

Nanoparticles

The determination of adsorption site structures of high dispersed oxides by EXAFS spectroscopy using molecules as probe (Kriventsov, V.V. (158) 287)

- Nickel**
 EPR for catalysts based on nickel and cobalt complexes (Saraev, V.V. (158) 149)
 Symmetric twisted carbon filaments formed from butadiene-1,3 on Ni–Cu/MgO-catalyst: growth regularities and mechanism (Chesnokov, V.V. (158) 267)
- Nitrogen**
 XPS and TEM study of new carbon material: N-containing catalytic filamentous carbon (Kvon, R.I. (158) 413)
- Nitrogen adsorption**
 Highly-ordered aluminosilicate mesoporous mesophase materials: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)
- Nitromethane**
 FTIRS study of the nature and reactivity of the products of nitromethane transformation on the surface of copper- and cobalt-exchanged ZSM-5 zeolites as related to the mechanism of NO_x CH₄-SCR (Beloshapkin, S.A. (158) 355)
- Nitrosyl complexes**
 FTIR and UV–Vis characterization of Fe-Silicalite (Spoto, G. (158) 107)
- Nitroxyl radical**
 Investigation of the mechanism of water transfer in catalysts and adsorbents (Yazykov, N.A. (158) 467)
- NMR**
 Hydrocarbon conversion on ZSM-5 in the presence of N₂O: relative reactivity and routes of product formation studied by GC-MS and ¹³C NMR (Vereshchagin, S.N. (158) 377)
- NMR ³¹P**
 Active metal species assembled with heteropoly tungstate anion PW₉O₃₄⁹⁻ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)
- N₂O**
 Hydrocarbon conversion on ZSM-5 in the presence of N₂O: relative reactivity and routes of product formation studied by GC-MS and ¹³C NMR (Vereshchagin, S.N. (158) 377)
- NO**
 Effect of NO on D₂ adsorption on the Pt(100)–(hex) surface (Vovk, E.I. (158) 395)
- NO adsorption**
 Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelectron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)
- NO and N₂O decomposition**
 In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)
- NO + H₂ reactions**
 Non-linear processes on Pt, Rh, Pd, Ir and Ru surfaces during the NO–hydrogen reactions (Cobden, P.D. (158) 115)
- Non-linearity**
 Non-linear processes on Pt, Rh, Pd, Ir and Ru surfaces during the NO–hydrogen reactions (Cobden, P.D. (158) 115)
- NO reduction**
 Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Nuclear magnetic resonance**
 Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)
- O₂/H₂ mixture**
 Active metal species assembled with heteropoly tungstate anion PW₉O₃₄⁹⁻ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)
- Olefin**
 Homogeneous hydrogenation of olefins catalyzed by a novel tetrahodium(II) complex as precursor in aqueous solution (Yang, Z. (158) 509)
- Oscillation**
 Non-linear processes on Pt, Rh, Pd, Ir and Ru surfaces during the NO–hydrogen reactions (Cobden, P.D. (158) 115)
- Oscillations**
 The role of subsurface oxygen in oscillatory behaviour of CO + O₂ reaction over Pd metal catalysts: Monte Carlo model (Latkin, E.I. (158) 161)
- Oxidation**
 Alkene and thioether oxidations with H₂O₂ over Ti-containing mesoporous mesophase catalysts (Kholdeeva, O.A. (158) 417)
 Thiol protected platinum black and palladium black catalysts in oxidation catalysis (Berezin, M.Yu. (158) 567)
- Oxidation reactions**
 Role of defect structure in structural sensitivity of the oxidation reactions catalyzed by dispersed transition metal oxides (Sadykov, V.A. (158) 361)
- Oxidation state of vanadium**
 Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelectron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)
- Oxidative coupling**
 Physicochemical and catalytic properties of glass crystal catalysts for the oxidation of methane (Anshits, A.G. (158) 209)
- Oxidative coupling of methane**
 In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)
- Oxidative dehydrogenation of ethane**
 Mechanistic insights in the activation of oxygen on oxide catalysts for the oxidative dehydrogenation of ethane from pulse experiments and contact potential difference measurements (Kondratenko, E.V. (158) 199)
- Oxides**
 New methods for determining surface structures (Marks, L.D. (158) 85)
 The determination of adsorption site structures of high dispersed oxides by EXAFS spectroscopy using molecules as probe (Kriventsov, V.V. (158) 287)
- Oxygen**
 Oxygen adsorption on the Ag(111) surface: a quantum chemical study by the NDDO/MC method (Milov, M.A. (158) 309)
 Structural transformations in overlayer and sticking probability during chemisorption: oxygen on (100) surface of metals (Salanov, A.N. (158) 367)
- Oxygen activation**
 Phororedox and photocatalytic processes on Fe(III)–porphyrin surface modified nanocrystalline TiO₂ (Molinari, A. (158) 521)

Oxygen adsorption

The combined application of XPS and TPD to study of oxygen adsorption on graphite-supported silver clusters (Bukhtiyarov, V.I. (158) 167)

Oxygen exchange

In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)

Palladium

The role of subsurface oxygen in oscillatory behaviour of CO + O₂ reaction over Pd metal catalysts: Monte Carlo model (Latkin, E.I. (158) 161)

Synthesis and study of palladium colloids and related catalysts (Troitski, S.Yu. (158) 461)

Hydrogenation reactions catalysed by a supported palladium complex (Dell'Anna, M.M. (158) 515)

Palladium(II)

Active metal species assembled with heteropoly tungstate anion PW₉O₃₄⁹⁻ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)

Partial pressure

The effects of process variables in the hydroformylation of methyl methacrylate with the in situ formed (*o*-thiomethylphenyl)diphenylphosphine rhodium complex (Reinius, H.K. (158) 499)

Pd

Catalytic reduction of nitrate and nitrite ions by hydrogen: investigation of the reaction mechanism over Pd and Pd–Cu catalysts (Ilinitch, O.M. (158) 237)

Pd–Cu

Catalytic reduction of nitrate and nitrite ions by hydrogen: investigation of the reaction mechanism over Pd and Pd–Cu catalysts (Ilinitch, O.M. (158) 237)

Percolation diffusion

Percolation diffusion of guest molecules in NaCaA zeolites: field gradient NMR studies and Monte Carlo simulations (Vasenkov, S. (158) 373)

Peroxo complexes

Olefin epoxidation by mono and bisperoxo complexes of Mo(VI): a density functional model study (Yudanov, I.V. (158) 189)

Phase transition

Investigation of the structure of protohematite — metastable phase of ferrum (III) oxide (Burgina, E.B. (158) 257)

Photocatalysis

Phororedox and photocatalytic processes on Fe(III)–porphyrin surface modified nanocrystalline TiO₂ (Molinari, A. (158) 521)

Photooxidation

An investigation of the effects of Cu²⁺ and heat treatment on TiO₂ photooxidation of certain pyrimidines (Dhananjeyan, M.R. (158) 577)

Platinum

Electronic properties of Pt(100) single crystal surface: experimental study and theoretical calculations (Cholach, A.R. (158) 181)

Platinum catalysed aqueous alcohol oxidation: experimental studies and reaction model discrimination (Markusse, A.P. (158) 215)

XPS study of carbon species at the surface of platinum single crystal planes (Kvon, R.I. (158) 297)

Platinum/alumina catalysts

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

Platinum and palladium catalysts

Thiol protected platinum black and palladium black catalysts in oxidation catalysis (Berezin, M.Yu. (158) 567)

Platinum metals

Study of H₂, O₂, CO adsorption and CO + O₂ reaction on Pt(100), Pd(110) monocrystal surfaces (Gorodetskii, V.V. (158) 155)

(VO)₂P₂O₇ catalyst

Vanadyl hydrogenphosphate sesquihydrate as a precursor for preparation of (VO)₂P₂O₇ and cobalt-incorporated catalysts (Ishimura, T. (158) 559)

Polyethylene

Catalytic synthesis of carbon nanostructures from polymer precursors (Maksimova, N.I. (158) 301)

Supported metallocenes using inorganic–organic hybrid xerogels (Dos Santos, J.H.Z. (158) 541)

Polyvinyl alcohol

Catalytic synthesis of carbon nanostructures from polymer precursors (Maksimova, N.I. (158) 301)

Powder X-ray diffraction

Simulation of X-ray powder diffraction patterns for low-ordered materials (Cherepanova, S.V. (158) 263)

Probe

The determination of adsorption site structures of high dispersed oxides by EXAFS spectroscopy using molecules as probe (Kriventsov, V.V. (158) 287)

Propylene polymerization

Ethylene and hydrogen effects in propylene polymerization with 2-aryllindenyl zirconocenes (Lin, S. (158) 423)

²⁷Al MAS NMR study of the interaction of supported Ziegler–Natta catalysts with organoaluminium co-catalyst in the presence of donors (Potapov, A.G. (158) 457)

¹⁹⁵Pt

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

Pt(100)

Effect of NO on D₂ adsorption on the Pt(100)–(hex) surface (Vovk, E.I. (158) 395)

Pt-containing catalysts

The radicals generation in the methanol oxidation on a Pt-containing catalysts. Influence of support acidic properties (Malakhova, I.V. (158) 439)

Pt speciation

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

Pyridine

XPS and TEM study of new carbon material: N-containing catalytic filamentous carbon (Kvon, R.I. (158) 413)

Pyrimidines

An investigation of the effects of Cu^{2+} and heat treatment on TiO_2 photooxidation of certain pyrimidines (Dhananjeyan, M.R. (158) 577)

QENS

Diffusion of linear and branched alkanes in ZSM-5. A quasi-elastic neutron scattering study (Jobic, H. (158) 135)

Quantum-chemical

Quantum-chemical investigation of the formation of Lewis acid centers of high-siliceous zeolites (Lamberov, A.A. (158) 481)

Radical cations

Unusual manifestation of benzene radical cations in ESR spectra on sulfated zirconia (Bedilo, A.F. (158) 405)

Raman microspectroscopy

In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)

Raman spectroscopy

In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)

Raman studies of supported V, Cr and Sb oxides and their mechanical mixture with $\alpha\text{-Bi}_2\text{Mo}_3\text{O}_{12}$ (Cortés Corberán, V. (158) 271)

Real structure

Simulation of X-ray powder diffraction patterns for low-ordered materials (Cherepanova, S.V. (158) 263)

Redox potentials

Redox potentials of molybdovanadophosphoric heteropoly acids in aqueous solutions (Odyakov, V.F. (158) 453)

Redox processes

Quantum-chemical investigation of Cu-containing catalysts for C–Cl bond metathesis (Smirnov, V.V. (158) 487)

Regiospecificity

Ethylene and hydrogen effects in propylene polymerization with 2-aryllindenyl zirconocenes (Lin, S. (158) 423)

Relative reactivity

Hydrocarbon conversion on ZSM-5 in the presence of N_2O : relative reactivity and routes of product formation studied by GC-MS and ^{13}C NMR (Vereshchagin, S.N. (158) 377)

Rhenia–alumina catalyst ($\text{Re}_2\text{O}_7\text{-Al}_2\text{O}_3$ catalyst)

Reaction products and the mechanism in the dimerization of 2-methyl-1-alkenes over Lewis acid and Brønsted acid catalysts: anomalous reaction behaviors of 2-methyl-1-alkenes over $\text{Re}_2\text{O}_7\text{-Al}_2\text{O}_3$ metathesis catalyst (Kawai, T. (158) 533)

Scanning tunneling microscopy

Adsorbate dynamics on iron oxide surfaces studied by scanning tunneling microscopy (Shaikhutdinov, Sh. (158) 129)

SCR

Mechanistic study of SCR-NO with methane over Pd-loaded BEA zeolite (Park, Y.-K. (158) 173)

Selective oxidation

In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)

Self-assembled monolayers

Thiol protected platinum black and palladium black catalysts in oxidation catalysis (Berezin, M.Yu. (158) 567)

Semi-empirical models and model calculations

Oxygen adsorption on the Ag(111) surface: a quantum chemical study by the NDDO/MC method (Milov, M.A. (158) 309)

Silica gel surface

On the problem of differentiation of acetone adsorption species on the silica gel: molecular models of adsorption complexes (Kachurovskaya, N.A. (158) 281)

Silver

Oxygen adsorption on the Ag(111) surface: a quantum chemical study by the NDDO/MC method (Milov, M.A. (158) 309)

Physicochemical study of active sites of metal catalysts for alcohol partial oxidation (Pestryakov, A.N. (158) 325)

XPS, TPD and TPR studies of Cs–O complexes on silver: their role in ethylene epoxidation (Podgornov, E.A. (158) 337)

Physicochemical investigation of the copper and silver catalysts of the ethylene glycol oxidation (Vodyankina, O.V. (158) 381)

Sol–gel

Supported metallocenes using inorganic–organic hybrid xerogels (Dos Santos, J.H.Z. (158) 541)

Solid state

Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)

Solutions

Redox potentials of molybdovanadophosphoric heteropoly acids in aqueous solutions (Odyakov, V.F. (158) 453)

Specific adsorption

Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)

Spinel

IR spectroscopic investigation of cation distribution in Zn–Co oxide catalysts with spinel type structure (Kustova, G.N. (158) 293)

Stacking faults

Simulation of X-ray powder diffraction patterns for low-ordered materials (Cherepanova, S.V. (158) 263)

Stage kinetics

Infrared spectroscopy to study the mechanism of catalytic reaction on molecular scale from diffusion to limiting stage kinetics (Paukshtis, E.A. (158) 37)

Sticking probability

Structural transformations in overlayer and sticking probability during chemisorption: oxygen on (100) surface of metals (Salanov, A.N. (158) 367)

Stoichiography methods

Stoichiography as applied to studying composition and real structure of catalysts (Malakhov, V.V. (158) 143)

Structural sensitivity

Role of defect structure in structural sensitivity of the oxidation reactions catalyzed by dispersed transition metal oxides (Sadykov, V.A. (158) 361)

Structure

Investigation of the structure of protohematite — metastable phase of ferrum (III) oxide (Burgina, E.B. (158) 257)

Structure transformations of copper chromite under reduction–reoxidation conditions (Plyasova, L.M. (158) 331)

Highly-ordered aluminosilicate mesoporous mesophase materi-

- als: physico-chemical properties and catalytic behaviour (Kodenev, E.G. (158) 349)
- Theoretical and low-temperature IR spectroscopic studies of catalytic complexes of aluminum chloride with nitroalkanes and nitrobenzene (Shilina, M.I. (158) 495)
- Subsurface hydrides
- Study of H₂, O₂, CO adsorption and CO + O₂ reaction on Pt(100), Pd(110) monocrystal surfaces (Gorodetskii, V.V. (158) 155)
- Sulfated zirconia
- Unusual manifestation of benzene radical cations in ESR spectra on sulfated zirconia (Bedilo, A.F. (158) 405)
- Development of an ESR technique for testing sulfated zirconia catalysts (Bedilo, A.F. (158) 409)
- Supported Co and Mo catalysts
- Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Supported metallocenes
- Supported metallocenes using inorganic–organic hybrid xerogels (Dos Santos, J.H.Z. (158) 541)
- Supported Ziegler–Natta catalysts
- ²⁷Al MAS NMR study of the interaction of supported Ziegler–Natta catalysts with organoaluminium co-catalyst in the presence of donors (Potapov, A.G. (158) 457)
- Surface
- The determination of adsorption site structures of high dispersed oxides by EXAFS spectroscopy using molecules as probe (Kriventsov, V.V. (158) 287)
- Surface intermediates
- Determination of surface intermediates during the selective oxidation of formaldehyde over V–Ti–O catalyst by in situ FTIR spectroscopy (Popova, G.Ya. (158) 345)
- Surfaces
- New methods for determining surface structures (Marks, L.D. (158) 85)
- Surface Structures
- Structural transformations in overlayer and sticking probability during chemisorption: oxygen on (100) surface of metals (Salanov, A.N. (158) 367)
- Synergy effects
- In situ Raman spectroscopy — a valuable tool to understand operating catalysts (Mestl, G. (158) 45)
- Temperature
- The effects of process variables in the hydroformylation of methyl methacrylate with the in situ formed (*o*-thiomethylphenyl)diphenylphosphine rhodium complex (Reinius, H.K. (158) 499)
- Temporal of products (TAP) reactor
- Mechanistic insights in the activation of oxygen on oxide catalysts for the oxidative dehydrogenation of ethane from pulse experiments and contact potential difference measurements (Kondratenko, E.V. (158) 199)
- Thioether oxidation
- Kinetics and mechanism of thioether oxidation with H₂O₂ in the presence of Ti(IV)-substituted heteropolytungstates (Kholdeeva, O.A. (158) 223)
- Thiols
- Thiol protected platinum black and palladium black catalysts in oxidation catalysis (Berezin, M.Yu. (158) 567)
- (*o*-Thiomethylphenyl)diphenylphosphine
- The effects of process variables in the hydroformylation of methyl methacrylate with the in situ formed (*o*-thiomethylphenyl)diphenylphosphine rhodium complex (Reinius, H.K. (158) 499)
- TiO₂
- Photoredox and photocatalytic processes on Fe(III)–porphyrin surface modified nanocrystalline TiO₂ (Molinari, A. (158) 521)
- TiO₂(110) single crystal
- Characterization and catalytic performance of designed surfaces (Kawaguchi, T. (158) 67)
- Titanium
- Alkene and thioether oxidations with H₂O₂ over Ti-containing mesoporous mesophase catalysts (Kholdeeva, O.A. (158) 417)
- Titanium-substituted heteropolytungstates
- Kinetics and mechanism of thioether oxidation with H₂O₂ in the presence of Ti(IV)-substituted heteropolytungstates (Kholdeeva, O.A. (158) 223)
- TPD
- The combined application of XPS and TPD to study of oxygen adsorption on graphite-supported silver clusters (Bukhtiyarov, V.I. (158) 167)
- TPR
- Effect of NO on D₂ adsorption on the Pt(100)–(hex) surface (Vovk, E.I. (158) 395)
- Transition metal oxides
- Role of defect structure in structural sensitivity of the oxidation reactions catalyzed by dispersed transition metal oxides (Sadykov, V.A. (158) 361)
- Transition states
- Olefin epoxidation by mono and bisperoxo complexes of Mo(VI): a density functional model study (Yudanov, I.V. (158) 189)
- Trioctylamine
- Synthesis and study of palladium colloids and related catalysts (Troitski, S.Yu. (158) 461)
- Triple layer
- Molecular-level studies of transition metal–support interactions during the first steps of catalysts preparation: platinum speciation in the hexachloroplatinate/alumina system (Shelimov, B.N. (158) 91)
- Tungstated tin dioxide
- Synthesis and study of acid catalyst 30% WO₃/SnO₂ (Maksimov, G.M. (158) 435)
- Tungstated zirconia
- Synthesis and study of acid catalyst 30% WO₃/SnO₂ (Maksimov, G.M. (158) 435)
- UV–Vis
- FTIR and UV–Vis characterization of Fe–Silicalite (Spoto, G. (158) 107)
- ⁵¹V
- Active metal species assembled with heteropoly tungstate anion PW₉O₃₄⁹⁻ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)
- Vanadium–magnesium catalysts
- Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelec-

- tron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)
- Vanadium oxide catalysts
Raman studies of supported V, Cr and Sb oxides and their mechanical mixture with α - $\text{Bi}_2\text{Mo}_3\text{O}_{12}$ (Cortés Corberán, V. (158) 271)
- Vibrational spectra
Analysis of the ab-initio force-fields of the polyatomic molecules followed by solution of the inverse spectral problem (Baltakhinov, V.P. (158) 399)
- V–Ti–O catalyst
Determination of surface intermediates during the selective oxidation of formaldehyde over V–Ti–O catalyst by in situ FTIR spectroscopy (Popova, G.Ya. (158) 345)
- ¹⁸³W
Active metal species assembled with heteropoly tungstate anion $\text{PW}_9\text{O}_{34}^{9-}$ for liquid phase hydrocarbon oxidation (Kuznetsova, L.I. (158) 429)
- Water-soluble rhodium complex
Homogeneous hydrogenation of olefins catalyzed by a novel tetra-rhodium(II) complex as precursor in aqueous solution (Yang, Z. (158) 509)
- XPS
The combined application of XPS and TPD to study of oxygen adsorption on graphite-supported silver clusters (Bukhtiyarov, V.I. (158) 167)
XPS study of carbon species at the surface of platinum single crystal planes (Kvon, R.I. (158) 297)
XPS, TPD and TPR studies of Cs–O complexes on silver: their role in ethylene epoxidation (Podgornov, E.A. (158) 337)
XPS and TEM study of new carbon material: N-containing catalytic filamentous carbon (Kvon, R.I. (158) 413)
Supported metallocenes using inorganic–organic hybrid xerogels (Dos Santos, J.H.Z. (158) 541)
- X-ray photoelectron spectroscopy (XPS)
XPS study of the silica-supported Fe-containing catalysts for deep or partial H_2S oxidation (Bukhtiyarova, G.A. (158) 251)
- X-ray diffraction
New methods for determining surface structures (Marks, L.D. (158) 85)
- X-ray photoelectron spectroscopy
Surface vanadium compounds in supported vanadium–magnesium catalysts for ethylene polymerization: X-ray photoelectron and infrared diffusion reflectance spectroscopy studies (Matsko, M.A. (158) 443)
- X-ray powder diffraction
Structure transformations of copper chromite under reduction–reoxidation conditions (Plyasova, L.M. (158) 331)
- X-ray Radial Electronic Density Distribution
Modeling of the curve radial electronic density distribution for amorphous Me–Zr–O systems (Moroz, E.M. (158) 313)
- Zeolites
Quantum-chemical investigation of the formation of Lewis acid centers of high-siliceous zeolites (Lamberov, A.A. (158) 481)
- Zirconium oxides
Modeling of the curve radial electronic density distribution for amorphous Me–Zr–O systems (Moroz, E.M. (158) 313)
- Zirconocenes
Supported metallocenes using inorganic–organic hybrid xerogels (Dos Santos, J.H.Z. (158) 541)
- ZSM-5
Diffusion of linear and branched alkanes in ZSM-5. A quasi-elastic neutron scattering study (Jobic, H. (158) 135)
Hydrocarbon conversion on ZSM-5 in the presence of N_2O : relative reactivity and routes of product formation studied by GC-MS and ¹³C NMR (Vereshchagin, S.N. (158) 377)
