

Subject index

Alkaline phosphatase

The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157

Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165

D-Amino acid oxidase

Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173

Aminolysis

Candida antarctica lipase B catalysed amidation of pyroglutamic acid derivatives. A reaction survey 299

Ammoniolysis

Candida antarctica lipase B catalysed amidation of pyroglutamic acid derivatives. A reaction survey 299

1-Anilino-8-naphthalene sulfonate

Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21

Animal cell cultivations

Investigations with respect to stabilization of screen-printed enzyme electrodes 67

Antibodies

Stabilisation of immunoassays and receptor assays 115

Apoflavodoxin

Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147

Aromatic carboxylic acid

A chemoenzymatic synthesis of aromatic carboxylic acid vinyl esters 307

Asymmetric synthesis

Asymmetric syntheses of nitroalkanols using *Pseudomonas* sp. lipase: a proposal for the selection of the solvent system of lipase-catalyzed transesterification 291

Azobenzene sulfonate ligands

Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21

Bacillus stearothermophilus

The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125

Binding ability

Effects of temperature on the cellulose binding ability of cellulase enzymes 233

Bioavailability

Stabilisation and delivery of labile materials by amorphous carbohydrates and their derivatives 11

Biocatalyst

Cytochrome *c* as a biocatalyst 241

Biocatalyst stability

Immobilised transketolase for carbon–carbon bond synthesis: biocatalyst stability 223

Biocatalytic membranes

Influence of the microenvironment on the activity of enzymes immobilized on Teflon membranes grafted by γ -radiation 251

Biosensor

Enzyme immobilisation on planar and porous silicon substrates for biosensor applications 77

Influence of polymerization parameters and entrapment in poly(hydroxyethyl methacrylate) on activity and stability of GOD 85

Biosensor devices

Proposed model for shelf-life prediction of stabilised commercial enzyme-based systems and biosensors 47

Biosensors

Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93

Candida antarctica lipase B

Candida antarctica lipase B catalysed amidation of pyroglutamic acid derivatives. A reaction survey 299

Carbon–carbon synthesis

Immobilised transketolase for carbon–carbon bond synthesis: biocatalyst stability 223

Carbonic acid esters

Lipase-catalyzed conversions of trimethylsilyl ethers: deprotection, acetylation, epoxidation and one-pot-multi-step reactions 283

Catalase

Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21

Cellulases

Effects of temperature on the cellulose binding ability of cellulase enzymes 233

Cellulose binding domain (CBD)

Effects of temperature on the cellulose binding ability of cellulase enzymes 233

- Chemical cross-linking of proteins
 - Stabilization of multimeric enzymes via immobilization and post-immobilization techniques 181
- Chemical modification
 - Irreversible thermoinactivation of α -chymotrypsin in buffer and water miscible organic solvent. Comparison with a reverse micellar system 191
- Chemical modification of enzymes
 - Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173
- α -Chymotrypsin
 - Irreversible thermoinactivation of α -chymotrypsin in buffer and water miscible organic solvent. Comparison with a reverse micellar system 191
- Compartmentalized biosystems
 - Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Conformational lock
 - The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
 - Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
- Controlled release
 - Stabilisation and delivery of labile materials by amorphous carbohydrates and their derivatives 11
- Cross-linker
 - Enzyme immobilisation on planar and porous silicon substrates for biosensor applications 77
- Cytochrome
 - Cytochrome *c* as a biocatalyst 241
- Deactivation
 - Effect of soluble additives on enzyme thermo- and/or baro-deactivation 1
 - Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- Degradation process
 - Irreversible thermoinactivation of α -chymotrypsin in buffer and water miscible organic solvent. Comparison with a reverse micellar system 191
- Denaturation
 - The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
 - Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
 - Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- Dextrans
 - Stabilization of multimeric enzymes via immobilization and post-immobilization techniques 181
- Dextrans in chemistry of proteins
 - Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173
- Direct micellar systems
 - Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Dye affinity of cellulases
 - Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- E. coli* JM109(pPS1778) recombinant strain
 - Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- EIS structure
 - Enzyme immobilisation on planar and porous silicon substrates for biosensor applications 77
- Entrapment in pHEMA
 - Influence of polymerization parameters and entrapment in poly(hydroxyethyl methacrylate) on activity and stability of GOD 85
- Enzyme
 - Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- Enzyme catalysis
 - Candida antarctica* lipase B catalysed amidation of pyroglutamic acid derivatives. A reaction survey 299
- Enzyme-catalyzed reactions
 - Study of enzyme-catalyzed reactions in organic solvents using multiple linear regression 273
- Enzyme electrode
 - Investigations with respect to stabilization of screen-printed enzyme electrodes 67
- Enzyme immobilisation
 - Enzymatic immobilisation in kappa-carrageenan gel suitable for organic phase enzyme electrode (OPEE) assembly 101
- Enzyme immobilization
 - Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173
- Enzymes
 - Proposed model for shelf-life prediction of stabilised commercial enzyme-based systems and biosensors 47
- Enzyme stabilization
 - The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
 - Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173
- Epoxidation
 - Lipase-catalyzed conversions of trimethylsilyl ethers: deprotection, acetylation, epoxidation and one-pot-multi-step reactions 283
- Escherichia coli*
 - Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
- Fibrinogen
 - Enzyme immobilization via microbial transglutaminase: a method for the generation of stable sensing surfaces 57

- Flavonoids
A chemoenzymatic synthesis of aromatic carboxylic acid vinyl esters 307
- Flow injection analysis
Investigations with respect to stabilization of screen-printed enzyme electrodes 67
- Freeze-drying
Stabilisation and delivery of labile materials by amorphous carbohydrates and their derivatives 11
- FTIR spectroscopy
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- β -Galactosidase
Effect of soluble additives on enzyme thermo- and/or baro-deactivation 1
Influence of the microenvironment on the activity of enzymes immobilized on Teflon membranes grafted by γ -radiation 251
- Glass
Stabilisation and delivery of labile materials by amorphous carbohydrates and their derivatives 11
- Glucose
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- Glucose oxidase
Investigations with respect to stabilization of screen-printed enzyme electrodes 67
Influence of polymerization parameters and entrapment in poly(hydroxyethyl methacrylate) on activity and stability of GOD 85
- Glutamate dehydrogenase
Glutamate dehydrogenase from hyperthermophilic Bacteria and Archaea: determinants of thermostability and catalysis at extremely high temperatures 133
- Glycosylation
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Hemoprotein
Cytochrome *c* as a biocatalyst 241
- High pressure
Effect of soluble additives on enzyme thermo- and/or baro-deactivation 1
- Holo flavodoxin
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147
- Hybrid enzymes
Glutamate dehydrogenase from hyperthermophilic Bacteria and Archaea: determinants of thermostability and catalysis at extremely high temperatures 133
- Hydrogen/deuterium exchange
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147
- Hydrogen peroxide
Stabilization of enzymes (D-amino acid oxidase) against hydrogen peroxide via immobilization and post-immobilization techniques 173
- Hydrophobic interactions
Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- Immobilised transketolase
Immobilised transketolase for carbon-carbon bond synthesis: biocatalyst stability 223
- Immobilization
Enzyme immobilization via microbial transglutaminase: a method for the generation of stable sensing surfaces 57
Influence of polymerization parameters and entrapment in poly(hydroxyethyl methacrylate) on activity and stability of GOD 85
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Immobilized enzymes
Influence of the microenvironment on the activity of enzymes immobilized on Teflon membranes grafted by γ -radiation 251
- Immunoassays
Stabilisation of immunoassays and receptor assays 115
- Infrared spectroscopy
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- In vitro application
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- In vivo application
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- Ion-pair networks
Glutamate dehydrogenase from hyperthermophilic Bacteria and Archaea: determinants of thermostability and catalysis at extremely high temperatures 133
- Ironing
Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- Isoenzymes
The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
- Isothermal titration calorimetry
Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21
- Lactate
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- Lactate dehydrogenase (LDH)
Protection of a model enzyme (lactate dehydrogenase) against heat, urea and freeze-thaw treatment by compatible solute additives 37
- Lactate oxidase
Investigations with respect to stabilization of screen-printed enzyme electrodes 67
- Ligand-binding
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147

- Ligand binding to proteins by forming ion pairs
Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21
- Limited proteolysis
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Lipase
Lipase-catalyzed conversions of trimethylsilyl ethers: deprotection, acetylation, epoxidation and one-pot-multi-step reactions 283
Asymmetric syntheses of nitroalkanols using *Pseudomonas* sp. lipase: a proposal for the selection of the solvent system of lipase-catalyzed transesterification 291
A chemoenzymatic synthesis of aromatic carboxylic acid vinyl esters 307
- Membrane proteins
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- Microbial transglutaminase
Enzyme immobilization via microbial transglutaminase: a method for the generation of stable sensing surfaces 57
- Microenvironmental
Influence of the microenvironment on the activity of enzymes immobilized on Teflon membranes grafted by γ -radiation 251
- Multiple linear regression
Study of enzyme-catalyzed reactions in organic solvents using multiple linear regression 273
- Multimeric enzymes
Stabilization of multimeric enzymes via immobilization and post-immobilization techniques 181
- Naphthalene
Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Naphthalene dioxygenase
Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Neutral protease
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Nitro alcohol
Asymmetric syntheses of nitroalkanols using *Pseudomonas* sp. lipase: a proposal for the selection of the solvent system of lipase-catalyzed transesterification 291
- NMR spectroscopy
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147
- Oligomers
The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
- OPEE
Enzymatic immobilisation in kappa-carrageenan gel suitable for organic phase enzyme electrode (OPEE) assembly 101
- Organic osmolyte
Protection of a model enzyme (lactate dehydrogenase) against heat, urea and freeze-thaw treatment by compatible solute additives 37
- Organic solvent
Enzymatic immobilisation in kappa-carrageenan gel suitable for organic phase enzyme electrode (OPEE) assembly 101
- Organic solvent systems
Irreversible thermoinactivation of α -chymotrypsin in buffer and water miscible organic solvent. Comparison with a reverse micellar system 191
- PAH
Cytochrome *c* as a biocatalyst 241
- Papain family sulfhydryl proteases
Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21
- Perhydrolysis
Lipase-catalyzed conversions of trimethylsilyl ethers: deprotection, acetylation, epoxidation and one-pot-multi-step reactions 283
- Peroxidase
Cytochrome *c* as a biocatalyst 241
- Polyols
Effect of soluble additives on enzyme thermo- and/or barodeactivation 1
- Porous silicon
Enzyme immobilisation on planar and porous silicon substrates for biosensor applications 77
- Protein conformation
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- Protein coprecipitation
Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21
- Protein cross-linking
Enzyme immobilization via microbial transglutaminase: a method for the generation of stable sensing surfaces 57
- Protein folding
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- Protein immobilization
Stabilization of multimeric enzymes via immobilization and post-immobilization techniques 181
- Protein protection by ligands
Protection of enzymes by aromatic sulfonates from inactivation by acid and elevated temperatures 21
- Protein secondary structure
FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- Protein stability
Stabilisation centres differ between structurally homologous proteins as shown by NMR spectroscopy 147

- FTIR spectroscopic characterization of protein structure in aqueous and non-aqueous media 207
- Pseudomonas fluorescens* N3
Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Pyroglutamic acid derivatives
Candida antarctica lipase B catalysed amidation of pyroglutamic acid derivatives. A reaction survey 299
- γ -Radiation
Influence of the microenvironment on the activity of enzymes immobilized on Teflon membranes grafted by γ -radiation 251
- Receptor assays
Stabilisation of immunoassays and receptor assays 115
- Receptors
Stabilisation of immunoassays and receptor assays 115
- Regioselective alcoholysis
A chemoenzymatic synthesis of aromatic carboxylic acid vinyl esters 307
- Reverse micelles
Irreversible thermoinactivation of α -chymotrypsin in buffer and water miscible organic solvent. Comparison with a reverse micellar system 191
- Ribonuclease A
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Ribonuclease B
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene
Characterization of the biological conversion of naphthalene to (+)-*cis*-(1*R*,2*S*)-dihydroxy-1,2-dihydronaphthalene in direct micellar systems 263
- Screen-printing
Investigations with respect to stabilization of screen-printed enzyme electrodes 67
- Shelf-life
Proposed model for shelf-life prediction of stabilised commercial enzyme-based systems and biosensors 47
- Silicon
Enzyme immobilisation on planar and porous silicon substrates for biosensor applications 77
- Site directed mutagenesis
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Solvent effect
Asymmetric syntheses of nitroalkanols using *Pseudomonas* sp. lipase: a proposal for the selection of the solvent system of lipase-catalyzed transesterification 291
- Solvents
Study of enzyme-catalyzed reactions in organic solvents using multiple linear regression 273
- Stabilisation
Protection of a model enzyme (lactate dehydrogenase) against heat, urea and freeze-thaw treatment by compatible solute additives 37
- Stabilisation of immunoassays and receptor assays 115
- Stabilisers
Stabilisation of immunoassays and receptor assays 115
- Stability
Stabilisation and delivery of labile materials by amorphous carbohydrates and their derivatives 11
Influence of polymerization parameters and entrapment in poly(hydroxyethyl methacrylate) on activity and stability of GOD 85
The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
Cytochrome *c* as a biocatalyst 241
- Stabilization
Effect of soluble additives on enzyme thermo- and/or barodeactivation 1
Enzyme immobilization via microbial transglutaminase: a method for the generation of stable sensing surfaces 57
Investigations with respect to stabilization of screen-printed enzyme electrodes 67
- Stabilization of enzymes
Stabilization of multimeric enzymes via immobilization and post-immobilization techniques 181
- Sterilization
Stability of immobilized enzymes as biosensors for continuous application in vitro and in vivo 93
- Structure
The putative common mechanism for inactivation of alkaline phosphatase isoenzymes 157
Catalytic properties, stability and the structure of the conformational lock in the alkaline phosphatase from *Escherichia coli* 165
- Temperature
Effect of soluble additives on enzyme thermo- and/or barodeactivation 1
- Thermal inactivation
The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125
- Thermostability
Glutamate dehydrogenase from hyperthermophilic Bacteria and Archaea: determinants of thermostability and catalysis at extremely high temperatures 133
Cytochrome *c* as a biocatalyst 241
- Transesterification
Asymmetric syntheses of nitroalkanols using *Pseudomonas* sp. lipase: a proposal for the selection of the solvent system of lipase-catalyzed transesterification 291
- Trichoderma reesei*
Effects of temperature on the cellulose binding ability of cellulase enzymes 233
- Trimethylsilyl ethers
Lipase-catalyzed conversions of trimethylsilyl ethers: deprotection, acetylation, epoxidation and one-pot-multi-step reactions 283

Tryptophan fluorescence

Protection of a model enzyme (lactate dehydrogenase) against heat, urea and freeze-thaw treatment by compatible solute additives 37

Effects of temperature on the cellulose binding ability of cellulase enzymes 233

Unfolding region

The concept of the unfolding region for approaching the mechanisms of enzyme stabilization 125

Vinyl ester

A chemoenzymatic synthesis of aromatic carboxylic acid vinyl esters 307

Xanthine oxidase

Investigations with respect to stabilization of screen-printed enzyme electrodes 67
