### Proceedings of the 8th Inert Matrix Fuel Workshop (IMF-8)

Contents . . . . .	vii	<i>A. van Veen, F. Labohm, H. Schut and M.A. van Huis</i>	65
<b>Editorial note</b>		Radiation-induced defect clusters in fully stabilized zirconia irradiated with ions and/or electrons, <i>K. Yasuda, C. Kinoshita, S. Matsumura and A.I. Ryazanov</i>	74
Inert matrix fuel strategies in the nuclear fuel cycle: the status of the initiative efforts at the 8th Inert Matrix Fuel Workshop, <i>C. Degueldre and T. Yamashita</i>	1	Irradiation effects on yttria-stabilized zirconia irradiated with neon ions, <i>T. Hojo, J. Aihara, K. Hojou, S. Furuno, H. Yamamoto, N. Nitani, T. Yamashita, K. Minato and T. Sakuma</i>	81
<b>Material science – preparation – properties</b>		<b>Irradiation in research reactors and systems</b>	
Thermal conductivity of zirconia based inert matrix fuel: use and abuse of the formal models for testing new experimental data, <i>C. Degueldre, T. Arima and Y.W. Lee</i>	6	Inert matrix fuel performance during the first two irradiation cycles in a test reactor: comparison with modelling results, <i>Ch. Hellwig and U. Kasemeyer</i>	87
Study on the mechanical properties and thermal conductivity of silicon carbide-, zirconia- and magnesia aluminate-based simulated inert matrix nuclear fuel materials after cyclic thermal shock, <i>Y.W. Lee, S.C. Lee, H.S. Kim, C.Y. Joung and C. Degueldre</i>	15	Morphology change of rock-like oxide fuels in reactivity-initiated-accident simulation tests, <i>T. Nakamura, H. Sasajima, T. Yamashita and H. Uetsuka</i>	95
Reaction of yttria-stabilized zirconia with zirconium, silicon and Zircaloy-4 at high temperature: a compatibility study for cermet fuels, <i>T. Arima, T. Tateyama, K. Idemitsu and Y. Inagaki</i>	24	In-pile irradiation of rock-like oxide fuels, <i>N. Nitani, K. Kuramoto, T. Yamashita, Y. Nihei and Y. Kimura</i>	102
Manufacturing of zirconia microspheres doped with erbia, yttria and ceria by internal gelation process as a part of a cermet fuel, <i>K. Idemitsu, T. Arima, Y. Inagaki, S. Torikai and M.A. Pouchon</i>	31	Post irradiation examination of irradiated americium oxide and uranium dioxide in magnesium aluminate spinel, <i>F.C. Klaassen, K. Bakker, R.P.C. Schram, R. Klein Meulekamp, R. Conrad, J. Somers and R.J.M. Konings</i>	108
Cermet sphere-pac concept for inert matrix fuel, <i>M.A. Pouchon, M. Nakamura, Ch. Hellwig, F. Ingold and C. Degueldre</i>	37	The fabrication and irradiation of plutonium-containing inert matrix fuels for the ‘Once Through Then Out’ experiment, <i>R.P.C. Schram, R.R. van der Laan, F.C. Klaassen, K. Bakker, T. Yamashita and F. Ingold</i>	118
Design and fabrication of specific ceramic–metallic fuels and targets, <i>A. Fernández, R.J.M. Konings and J. Somers</i>	44	Doppler effect measurement on resonance materials for rock-like oxide fuels in an intermediate neutron spectrum, <i>M. Andoh, Y. Nakano, S. Okajima and K. Kawasaki</i>	126
Zirconium nitride as inert matrix for fast systems, <i>M. Streit, F. Ingold, M. Pouchon, L.J. Gauckler and J.-P. Ottaviani</i>	51	Modelling the behaviour of oxide fuels containing minor actinides with urania, thoria and zirconia matrices in an accelerator-driven system, <i>V. Sobolev, S. Lemehov, N. Messaoudi, P. Van Uffelen and H. Ait Abderrahim</i>	131
Zirconate pyrochlore as a transmutation target: thermal behaviour and radiation resistance against fission fragment impact, <i>S. Lutique, D. Staicu, R.J.M. Konings, V.V. Rondinella, J. Somers and T. Wiss</i>	59	<b>Situation in nuclear reactors and reactor parks</b>	
<b>Irradiation with accelerators</b>		Comparison of various partial light water reactor core loadings with inert matrix and mixed-oxide fuel,	
Thermal annealing behaviour and defect evolution of helium in fully stabilised zirconia, <i>P.M.G. Damen,</i>			

<i>U. Kasemeyer, Ch. Hellwig, J. Lebenhaft and R. Chawla</i>	142	Advanced fuels for plutonium management in pressurized water reactors, <i>A. Vasile, Ph. Dufour, H. Golfier, J.P. Grouiller, J.L. Guillet, Ch. Poinot, G. Youinou and A. Zaetta</i>	173
The feasibility of employing inert matrix ceramic fuels in a Russian light water reactor, <i>Yu.D. Baranaev, V.V. Popov, V.N. Sharapov and V.M. Troyanov</i>	154		
Reactor physics and safety aspects of various design options of a Russian light water reactor with rock-like fuels, <i>A.V. Bondarenko, O.V. Komissarov, Ya.K. Kozmenkov, Yu.V. Matveev, Yu.I. Orekhov, V.A. Pivovarov and V.N. Sharapov</i>	159	<b>Back end</b>	
Core burnup calculation and accidents analyses of a pressurized water reactor partially loaded with rock-like oxide fuel, <i>H. Akie, Y. Sugo and R. Okawa</i>	166	Durability test on irradiated rock-like oxide fuels, <i>K. Kuramoto, N. Nitani and T. Yamashita</i>	180
