Proceedings of the Seventh International Symposium on Molten Salts Chemistry and Technology (MS7) – Session 6: *Workshop on Nuclear Energy and Nuclear Wastes*

Contents	vii		
Preface	ix		
Generation IV Reactor: MSR (Molten Salts Reactor)			
Molten salts and nuclear energy production, <i>C. Le Brun</i>	1	Application of electrochemical techniques in pyrochemical processes – Electrochemical behaviour of rare earths at W, Cd, Bi and Al electrodes, <i>Y. Castrillejo, R. Bermejo, A.M. Martínez, E. Barrado and P. Díaz Arocas</i>	32
Chemistry and technology of Molten Salt Reactors – history and perspectives, <i>J. Uhlir</i>	6	Lanthanide and actinide speciation in molten fluorides: A structural approach by NMR and EXAFS spectroscopies, <i>C. Bessada, A. Rakhmatullin, A.-L. Rollet and D. Zanghi</i>	43
Nuclear fuel reprocessing using molten salts		Pyroprocesses for nuclear waste treatment using molten salts media	
Nuclear energy and waste management – pyroprocess for system symbiosis, <i>T. Ogawa, K. Minato, Y. Okamoto and K. Nishihara</i>	12	Investigation of electrorefining of metallic alloy fuel onto solid Al cathodes, <i>L. Cassayre, R. Malmbeck, P. Masset, J. Rebizant, J. Serp, P. Soucek and J.-P. Glatz</i>	49
Properties (thermodynamic, electrochemistry, spectroscopy) of the molten salts media used in reprocessing techniques		The evaluation of the pyrochemistry for the treatment of Gen IV nuclear fuels – Inert matrix chlorination studies in the gas phase or molten chloride salts, <i>S. Bourg, F. Péron and J. Lacquement</i>	58
Thermal and physical properties of molten fluorides for nuclear applications, <i>J.P.M. van der Meer and R.J.M. Konings</i>	16	Feasibility of the electrochemical way in molten fluorides for separating thorium and lanthanides and extracting lanthanides from the solvent, <i>P. Chamelot, L. Massot, C. Hamel, C. Nourry and P. Taxil</i>	64
Electrochemical behaviour of gadolinium ion in molten LiCl–KCl eutectic, <i>C. Caravaca, G. de Córdoba, M.J. Tomás and M. Rosado</i>	25
