

Correction to Mild Organocatalytic α -Methylenation of Aldehydes

Anniina Erkkilä and Petri M. Pihko*

J. Org. Chem. **2006**, *71*(6), 2538–2541. DOI: 10.1021/jo052529q

S Supporting Information

We would like to clarify the experimental procedure as follows. After the reaction is complete, 7% aq NaHCO₃ is added (not solid NaHCO₃ as indicated in the original procedure), and the reaction is worked up immediately. The instability of the products may result in lower yields if the reaction mixtures are left standing. The revised protocol is on page S5 of the complete Supporting Information associated with this Addition/Correction.
