

Sonochemistry by K.S. Suslik. The next review (77 pages), an excellent one, is of Carbene and Carbyne Complexes of Ruthenium, Osmium, and Iridium, by M.A. Gallop and W.R. Roper (who has contributed very importantly to the subject), and this is followed by an authoritative account of Borabenzene Metal Complexes (38 pages) by G.E. Herberich (again the pioneer in the field) and H. Ohst. The last three chapters, all well written, are on The Synthesis of Organometallics by Decarboxylation Reactions (39 pages), by G.B. Deacon, S.J. Faulks, and G.N. Pain; Detection of Transient Organometallic Species by Fast Time-Resolved IR Spectroscopy (40 pages), by M. Poliakoff and E. Weitz; and Carbonyl Derivatives of Titanium, Zirconium, and Hafnium (63 pages) by D.J. Sikora, D.W. Macomber, and M.D. Rausch.

In a series so consistently good this is a vintage issue, and the editors are once again to be congratulated, and thanked for their efforts.
