Foreword

## Frontiers in Organometallic Chemistry 2007

The contents of this special issue are derived from presentations made by invited speakers in a symposium of this title that was held at the 234th National Meeting of the American Chemical Society that was held in Boston, MA in August of 2007. The contributions represent a range of current topics in organometallic chemistry provided by leaders in the field as of this date. Some highlights include: facile activation of hydrogen by unsaturated mixed metal cluster complexes; catalysis by gold particles, new chelating nitrogen ligands and investigations of the cyclopropenylidene ligand.
