

Standardization of Disinfectants, by H. C. Hamilton; The Pharmacy of Adrenalin, by C. P. Beckwith. These and the other papers in this volume contain much that is of value in addition to the subject matter announced in the titles. This varied information could be made more readily available by appending a more or less comprehensive index to the individual volume or better still by compiling in connection with a future volume an index to the material already published. Even as they are these reprints constitute an important contribution to the literature on the properties and uses of drugs that should be known to all who are in any way interested in pharmacology or related branches.

### Obituary

#### GEORGE D. FELDNER.

George D. Feldner, senior, sixty-one years old, died recently in New Orleans, where he had been engaged in the drug business for forty-five years. During the scourge of 1878, Mr. Feldner, then a young druggist, volunteered his services as druggist to the cause and gave freely of his time and means.

In the death of Mr. Feldner, New Orleans loses one of its oldest and best known druggists. He typified the southern gentleman of the old school, a man who was ever gentle and kind to those with whom he came in contact and who, on account of his genial disposition, numbered friends in all the walks of life. To the poor he was most kind, and without ostentation, gave them such assistance as he could.

He became a member of the Board of Trustees of the New Orleans College of Pharmacy a few weeks after its organization, and his devotion to the institution was most loyal, being a constant attendant at all its meetings except when sickness prevented. For thirteen years he was the President of the College and his services at all times, especially when the institution needed them most, were most valuable.

He became a member of the American Pharmaceutical Association in 1913.

At the time of his demise, Mr. Feldner was a member of the Democratic State Central Committee, and a prominent Mason, Pythian and Druid, and an honorary member of the Washington Artillery.

He is survived by his wife, one son and two daughters.

#### G. H. CHAS. KLIE.

G. H. Chas. Klie, as he was familiarly known, died at his home in St. Louis, September 24, 1915, in his seventieth year. Cancer was the immediate cause of death. He was born in Germany in 1845 and came to this country as an orphan, at an early age. An uncle who cared for him intended to educate him for the clergy. He, however, drifted into pharmacy. He was located at 5100 North Broadway, St. Louis, for more than forty years. Although much interested in pharmacy, he studied medicine about twenty years ago and soon had a good practice which was carried on in connection with the drug business.

Dr. Klie belonged to the old German type of pharmacist of which he was one of the very last remaining in St. Louis. He was for years secretary of the Mo. Ph. A. and always interested in the A. Ph. A., of which he became a member in 1878. He was a life member of the St. Louis College of Pharmacy and served as secretary for several years. He was for ten years assistant secretary of the United States Pharmacopœial Convention. His contributions to pharmacy were always instructive and practical. A case he reported to the St. Louis Medical Society caused very favorable comment not only on account of the very careful study which Dr. Klie had given the subject but the very clear and concise manner in which he described the disease and explained his conclusions.

As a citizen and Christian gentleman, Dr. Klie measured up to the highest standard.

Among the active pall-bearers were Messrs. Francis Hemm, Robert E. Schlueter and H. M. Whelpley, of the St. Louis College of Pharmacy.
