Omaha, Neb.

REINSTATED SINCE FEB. 18, 1915.

GILBERTSON, L. S.,
Snohomish, Wash.

FISCHER, RAY O.,
Jefferson, Wis.

A NEW INSECTICIDE.

"Para-dichlorobenzene" is a chemical compound only recently used as an insecticide, but which, in being noninflammable and comparatively inexpensive, possesses advantages over other fumigants. The United States Department of Agriculture's new bulletin (No. 167) is entitled, "Para-dichlorobenzene as an Insect Fumigant," and points out that the compound, although deadly to insects, is harmless to human beings under ordinary conditions, and does not have an odor which clings to fabrics, as do many insecticides.

Para-dichlorobenzene is a colorless crystalline substance which evaporates very quickly as a vapor, if exposed. It costs 15 cents per pound in barrel lots.
