A general request for papers has been sent out and an interesting program is being prepared. An informal reception will be held during the first session, Tuesday afternoon, at 2.00 P.M.

THINKING FOR YOURSELF

Suddenly a man wakes to the realization that he must do his own thinking—that he is as a swimmer who beyond the life ropes or the beach guard's reach must depend on his own powers. At the top of any going concern one sees commanders who are envied, because apparently they can "take it easy" or continue at a driving pace, just as they choose. The underlings must keep early and late hours, they must fetch and carry, they must obey and serve without back talk, and though by their industry (they think) the business thrives, they only get a pittance for pay compared with what they deserve.

But possibly the thought has not occurred to the man at the bottom that the man at the top got there by the survival of the fittest, because he endured the heat and burden of the day. He has made the places for the subordinates to take. He has created the opportunities into which they step. There would be no snug salaried berth if he had not gone before to prepare the way.

Nothing is easier than to get the hammer out and perform in an anvil chorus, like frogs in a marsh, with voices blaming and abusing the man higher up. The passengers meet in the cabin and pass resolutions condemning the captain and telling him how to run the boat. But alone on the mist-hung bridge he stands and is responsible for the direction of the vessel toward the haven where the passengers would be. The captain of a ship of state, the captain of an industry, incurs the same kind of batrachian reproach from those who are not responsible. He must do the anxious planning. Others execute the orders that he gives. One wrong decision may spell ruin for them all.

A man may have given years and years to build a fortune. His very life-blood has perhaps been poured into the arteries of the business he has created. Then he takes the fruits of his long toil and prayerfully puts them into a new venture. The undertaking miscarries. He must begin again at the bottom. He is a power among his kind if he can turn the trick and rise again undaunted, and get back to the place from which he was dashed.

Business needs brains as well as capital. Any fool can lose money hand over fist. To decide rightly when to throw a dollar after a dollar, or a million after a million, is business genius. The leaders in business have an uncanny intuition for futurities, a second-sight enabling them to pierce the veil of the beyond. That is why the capital financial prizes go to them.

Let it not be thought that all the premiums worth having go to the kind of thinking that advances merely the commercialists. Success in life marches and rests under other standards than those of the dollar-sign. Life grows beautiful and dear by the sensitive perceptions of other values than the price-mark. Birds and flowers and water-brooks and forests have nothing to say to the man "with eyes like little dollars in the dark" who always thinks of the cash appraisal of the view. The philosopher in his garden or his quiet room knows countless satisfactions money cannot buy. As surely as the imperial mind in trade or commerce, he does his thinking for himself, in a sturdy, fine and honorable independence. He lives his life, like Brashear, of Pittsburgh, not thinking of a bank account, but considering the good he can do, and loving all breathing creatures whether they walk on four legs or on two. Such a life has its own peculiar satisfactions that are born of intellectual freedom, and therefore born of truth.—*Editorial Phila. Ledger.*
