

In the article titled "Use of the Derjaguin, Landau, Verwey, and Overbeek Theory to Interpret Pharmaceutical Suspension Stability" (1), the following corrections should be made:

On page 523, the results for the sedimentation heights, H_u/H_o , % for the sulfamerazine series in Fig. 3 were wrongly plotted. The correct figure appears below:

Figure 3—Coagulation of several drugs in 10^{-3} M ammonium dioxoethylated dodecyl sulfate by aluminum chloride at pH 2.0. Key: ■, sulfamerazine; □, griseofulvin, coarse; ○, griseofulvin, fine; and ●, hydrocortisone.

On page 523, Table II, the first two zeta potential values would be quoted more realistically to the nearest 0.5 mv., *i.e.*, -46.5 and -32.5 mv., in view of the relatively low precision of electrophoresis measurements.

On page 523, column 2, line 24 should read "ADDS" instead of "SDDS."

On page 524, Table III, the second figure in the column headed Suspension and Zeta Potential, mv., should be 32.7^2 instead of 3.27^2 . A horizontal line should be drawn across Table III after the first set of values for zeta potential 4.5^4 . The results below this line refer to a Hamaker constant, A , of 5×10^{-13} . The first two zeta potential values in Table III would be quoted more realistically to the nearest 0.5 mv., *i.e.*, -46.5 and -32.5 mv., in view of the relatively low precision of electrophoresis measurements.

On page 525, Table IV should appear as shown below:

Table IV—Rheological Examination of Griseofulvin Suspensions

	1310	6.0
	873	6.9
	436	9.6

On page 525, Reference 3, the volume number should be 20 and the page number should be 2045.
