## Aims and Scope

This journal is an international medium for the publication of original research reports and authoritative reviews on pharmaceutical and biomedical analysis. It covers the interdisciplinary aspects of analysis in the pharmaceutical and biomedical sciences, including relevant developments in analytical methodology, instrumentation, computation and interpretation. Submissions on novel applications focussing on individual groups of drugs, drug stability studies, pharmacokinetics, therapeutic monitoring, metabolic profiling; drug-related aspects of analytical biochemistry and forensic toxicology; quality assurance and drug-related topics of health and safety in the pharmaceutical industry are welcome.

Since classical spectrophotometric (including derivative spectrophotometry), measurements and applications, solvent extraction, basic electroanalytical methods, titrimetry, etc. are well established, studies in such areas should demonstrate a unique and substantial advantage over presently known systems. Studies reported should be supported by a demonstration of the application of the method to actual samples. In determining the suitability of submitted articles for publication, particular scrutiny will be placed on the degree of novelty and significance of the research and the extent to which it adds to existing knowledge in pharmaceutical and biomedical analysis. In all submissions to the journal, authors must address the question of how their proposed methodology compares with previously reported methods. A substantial body of work cannot be fractionated into different shorter papers.

The journal is directed towards the needs of academic, clinical, government and industrial analysis and presents a unique forum for the discussion of current developments at the interface between pharmaceutical, biochemical and clinical analysis.
