

P-Sb (Phosphorus-Antimony)

H. Okamoto

The partial P-Sb phase diagram (95 to 100 at.% Sb) in [Massalski2] was redrawn from [1952Vog] (see the assessment of this system by [1991Oka]). The complete phase diagram of this system was proposed by [1994Ans] based on thermodynamic modeling. Figure 1 shows the P-Sb phase diagram under the ambient pressure. The boiling point of Sb is 1587 °C according to [Massalski2], but it is shown at a temperature about 50 °C lower. Figure 2 shows the P-Sb phase diagram for the condensed phases (the gas phase is suppressed).
