COMMENT

Comment on ‘New relations between the Clebsch–Gordan coefficients of SU(2)’

Received 6 June 1980

Abstract. The relations investigated by Kulesza and Rembieliński are particular cases of a recoupling equation

Kulesza and Rembieliński (1980) obtained relations between Clebsch–Gordan coefficients of the type (their equation (12))

$$\sum_{sm} \omega_{[AB],[A'B']}^s \langle AB \ ab \ | \ sm \rangle \langle A'B' \ a'b' \ | \ sm \rangle = 0.$$

Relations of this kind can be obtained from the recoupling equation (which follows, for example, from equation (2.20) of Rotenberg *et al* (1959))

$$\begin{aligned} \sum_{sm} (-1)^{A+B+s} \left\{ \begin{matrix} s & A & B \\ \lambda & B' & A' \end{matrix} \right\} \langle AB \ ab \ | \ sm \rangle \langle A'B' \ a'b' \ | \ sm \rangle \\ = \frac{(-1)^{A-a+B'-b'}}{2\lambda+1} \langle AA' \ a-a' \ | \ \lambda \ a-a' \rangle \langle BB' \ b-b' \ | \ \lambda \ b-b' \rangle \end{aligned} \tag{R}$$

by setting $|a-a'| > \lambda$ so that the right-hand side vanishes.

Equation (24) of Kulesza and Rembieliński (1980) is obtained from the recoupling equation (R) when λ takes the smallest meaningful value $n_0 = \max(|A-A'|, |B-B'|)$:

$$\omega_{[AB],[A'B']}^s_{\min} = G (-1)^{A+B+s} \left\{ \begin{matrix} s & A & B \\ n_0 & B' & A' \end{matrix} \right\}$$

where

$$G = \left(\frac{(2A+1)!(A+B-A'-B')!(A-B-A'+B')!(A+B-A'+B'+1)!}{(2A-2A')!(2A')!(-A+B+A'+B')!} \right)^{1/2}$$

(in the case $n_0 = A-A'$) as results from equation (22.14) of Jucys and Bandzaitis (1965) for the stretched $6j$ coefficient.

Equations (26) and (27) of Kulesza and Rembieliński (1980) correspond to

$$\omega_{[AB],[A'B']}^s = G [s(s+1)]^n (-1)^{A+B+s} \left\{ \begin{matrix} s & A & B \\ n_0 & B' & A' \end{matrix} \right\},$$

† Laboratoire associé à l'Université Paris-Sud.

which, using the recurrence relations (23.17) of Jucys and Bandzaitis (1965) is seen to be of the form

$$\omega_{[AB][A'B']}^s = \sum_{k=0}^n C_k (-1)^{A+B+s} \begin{Bmatrix} s & A & B \\ n_0+k & B' & A' \end{Bmatrix}$$

where the C_k do not depend on s . Equation (26) or (27) is then the linear combination of equations (R) for $\lambda = n_0 + k$ with coefficients C_k ($0 \leq k \leq n$).
