Asymptotic operator algebras in quantum mechanics

Kay-Kong Wan and R G D McLean 1984 *J. Phys. A: Math. Gen.* **17** 825–36

The last line on page 826 should read

$$\|(E_x(b_{r_k}) - E_x(b_{r_{k-1}}))\psi_{t_k}\|^2 > 1 - 1/k.$$

The expression in (1) of *Definition 3* on page 829 should be

$$\mathcal{A}_\Lambda = \{E_x(\Lambda)AE_x(\Lambda): A \in B(\mathcal{H})\}.$$

The line immediately above *Lemma 2* on page 831 should read:

by the lemma and theorem below.

On page 832 the expression at the end of the line labelled (4) in the *Proof* should be

$$A \in \mathcal{A}, \text{ not } A \in \Delta.$$

On page 834 the expression at the end of the first line in the last paragraph at the bottom should read

$$G \in \mathcal{A}, \text{ not } G \in \Delta.$$

Observables of asymptotically vanishing correlations, states at infinity and quantum separability

Kay-Kong Wan and R G D McLean 1984 *J. Phys. A: Math. Gen.* **17** 837–46

The first line on page 839 should read

Postulate 1. A free quantum particle in \mathbb{R}^n has associated with it the C^* -algebra...
