

## SUBJECT INDEX

---

- Accumulators**  
 nickel-cadmium, plastic-bonded electrodes for,  
 VI. Oxygen recombination rate on sealed cell cadmium electrodes, 65  
 VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 113
- Active mass**  
 of the negative plate of lead-acid batteries, investigation of the structure of the, 153
- Active material**  
 in lead-acid batteries during discharge, capacity limiting role of the electronic conductivity of the, 281
- Adsorption behaviour**  
 in the gas phase of carbides prepared from different starting materials, 257
- Alkaline electrolyte**  
 -lithium miniature primary batteries, 165
- Aluminum**  
 -polycrystalline silicon solar cells, the influence of surface preparation on rectification in, 191
- Australian**  
 EV battery programme, 313
- Batteries**  
 alkaline electrolyte-lithium miniature primary, 165  
 lead-acid  
 capacity limiting role of the electronic conductivity of the active material in, during discharge, 281  
 equipment for testing automotive, under SAE J240a conditions, 391  
 an investigation of the structure of the active mass of the negative plate of, 153  
 lithium, ambient temperature, status of rechargeable positive electrodes for, 1  
 sodium/sulphur, beta-alumina electrolyte for use in. Part 2. Manufacture and use, 45
- Battery electrodes**  
 lead-acid, on thermopassivation of positive. Part 1. The influence of drying positive dry-charged lead-acid battery electrodes on thermopassivation and its causes, 201
- Battery grade**  
 manganese dioxide, thermoelectric e.m.f. of, 95
- Battery internal resistance**  
 a new technique for determining, studies on Leclanché cells, 267
- Battery programme**  
 Australian EV, 313  
 Japanese EV, 331  
 U.S.A. EV, 317
- Battery system**  
 zinc-chloride, life-testing of 1.7 kW h, cycles 1 - 1000, 121
- Beta-alumina electrolyte**  
 for use in sodium sulphur batteries. Part 2. Manufacture and use, 45
- Cadmium**  
 electrodes, plastic-bonded, influence of different metal screens on the oxygen recombination rate on, 113  
 electrodes, sealed cell, oxygen recombination rate on, 65  
 plastic-bonded electrodes for nickel-cadmium accumulators.  
 VI. Oxygen recombination rate on sealed cell cadmium electrodes, 65  
 VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 113
- Capacity**  
 limiting role of the electronic conductivity of the active material in lead-acid batteries during discharge, 281
- Carbides**  
 adsorption behaviour in the gas phase of, prepared from different starting materials, 257
- Catalyst**  
 silver, polarized in the region of negative potentials, an investigation of the oxygen cathode with a, 105
- Cathode**  
 oxygen, with a silver catalyst polarized

in the region of negative potentials, an investigation of the, 105

#### Cell(s)

aluminum-polycrystalline silicon solar, the influence of surface preparation on rectification in, 191

fuel, high temperature, and steam electrolysis, using proton conductive solid electrolytes, 293

lead-acid, research and development, recent advances in, 343

Leclanché, studies on, a new technique for determining battery internal resistance, 267

lithium,  $(\text{Mo}_{0.3}\text{V}_{0.7})_2\text{O}_5$  as a solid solution cathode for, Part I. Electrochemical behaviour of primary cells, 133

Part II. Structural characteristics and secondary cells, 145

Li-SO<sub>2</sub>, energy conversion by spontaneously reacting, 365

solar photoelectrochemical, photocatalytic behaviour of *n*-MoSe<sub>2</sub> single crystals in contact with the I<sup>-</sup>, I<sub>2</sub> redox couple in, 275

steam electrolysis, high temperature fuel and, using proton conductive solid electrolytes, 293

#### Chloride

life-testing of 1.7 kW h zinc-chloride battery system: cycles 1 - 1000, 121

#### Diesel engines

the methanol fuel cell as a competitor to Otto and, 215

#### Discharge behaviour

of electrodeposited PbO<sub>2</sub> and Pb electrodes, 73

#### Electric vehicles

battery programme

Australian, 313

U.S.A., 317

Japanese, 331

power sources for, NERDDC workshop on, 311

#### Electrodes

cadmium, sealed cell, oxygen recombination rate on, 65

lead-acid battery, positive, on thermopassivation of. Part I. The influence of drying positive dry-charged lead-acid battery electrodes on thermopassivation and its causes, 199

lead-acid positive, the Planté formation process for, 181

lead and lead dioxide, discharge behaviour of electrodeposited, 73

plastic-bonded cadmium, influence of different metal screens on the oxygen recombination rate on, 113

plastic-bonded, for nickel-cadmium accumulators.

VI. Oxygen recombination rate on sealed cell cadmium electrodes, 65

VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 113

rechargeable positive, status of, for ambient temperature lithium batteries, 1

#### Electrolyte(s)

alkaline electrolyte-lithium miniature primary batteries, 165

beta-alumina, for use in sodium/sulphur batteries. Part 2. Manufacture and use, 45

proton conductive solid, high temperature fuel and steam electrolysis cells using, 293

#### Electronic conductivity

of the active material in lead-acid batteries during discharge, the capacity limiting role of the, 281

#### Energy conversion

by spontaneously reacting Li-SO<sub>2</sub> cells, 365

#### Equipment for testing

automotive lead/acid batteries under SAE J240a conditions, 391

#### Fuel cells

efficiencies of heat engines and, the methanol fuel cell as a competitor to Otto and Diesel engines, 215

#### Gas phase

of carbides, adsorption behaviour in the, prepared from different starting materials, 257

#### Heat engines

efficiencies of, and fuel cells, the methanol fuel cell as a competitor to Otto and Diesel engines, 215

#### I<sup>-</sup>, I<sub>2</sub> redox couple

photocatalytic behaviour of *n*-MoSe<sub>2</sub>

- single crystals in contact with the, in solar photoelectrochemical cells, 275
- Japanese  
EV battery programme, 331
- Lead  
electrodes, PbO<sub>2</sub> and Pb, discharge behaviour of electrodeposited, 73
- Lead-acid  
batteries  
capacity limiting role of the electronic conductivity of the active material in, during discharge, 281  
equipment for testing automotive, under SAE J240a conditions, 391  
an investigation of the structure of the active mass of the negative plate of, 153  
battery electrodes, on thermopassivation of positive. Part 1. The influence of drying positive dry-charged lead-acid battery electrodes on thermopassivation and its causes, 201  
positive electrodes, the Planté formation process for, 181  
research and development, recent advances in, 343
- Lead dioxide  
electrodes, discharge behaviour of electrodeposited, 73
- Leclanché cells  
studies on, a new technique for determining battery internal resistance, 267
- Lithium  
alkaline electrolyte-lithium miniature primary batteries, 165  
batteries, ambient temperature, status of rechargeable positive electrodes for, 1  
-SO<sub>2</sub> cells, energy conversion by spontaneously reacting, 365
- Lithium cells  
(Mo<sub>0.3</sub>V<sub>0.7</sub>)<sub>2</sub>O<sub>5</sub> as a solid solution cathode for,  
Part I. Electrochemical behaviour of primary cells, 133  
Part II. Structural characteristics and secondary cells, 145
- Manganese dioxide  
battery grade, thermoelectric e.m.f. of 95
- Methanol fuel cell  
as a competitor to Otto and Diesel engines, 215
- Molybdenum  
(Mo<sub>0.3</sub>V<sub>0.7</sub>)<sub>2</sub>O<sub>5</sub> as a solid solution cathode for lithium cells  
Part I. Electrochemical behaviour of primary cells, 133  
Part II. Structural characteristics and secondary cells, 145  
photocatalytic behaviour in *n*-MoSe<sub>2</sub> single crystals in contact with the I<sup>-</sup>, I<sub>2</sub> redox couple in solar photoelectrochemical cells, 275
- Negative plate  
of lead-acid batteries, investigation of the structure of the active mass of the, 153
- NERDDC workshop  
on power sources for electric vehicles, 311
- Nickel  
plastic-bonded electrodes for nickel-cadmium accumulators.  
VI. Oxygen recombination rate on sealed cell cadmium electrodes, 65  
VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 113
- Otto engines  
the methanol fuel cell as a competitor to, and Diesel engines, 215
- Oxygen  
cathode with a silver catalyst polarized in the region of negative potentials, an investigation of the, 105  
recombination rate on plastic-bonded cadmium electrodes, influence of different metal screens, 113  
recombination rate on sealed cell cadmium electrodes, 65
- Photocatalytic behaviour  
of *n*-MoSe<sub>2</sub> single crystals in contact with the I<sup>-</sup>, I<sub>2</sub> redox couple in solar photoelectrochemical cells, 275
- Planté formation process  
for lead-acid positive electrodes, 181
- Plastic-bonded electrodes  
for nickel-cadmium accumulators.  
VI. Oxygen recombination rate on sealed cell cadmium electrodes, 65

- VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 113
- Power sources  
for electric vehicles, NERDDC workshop on, 311
- Rechargeable positive electrodes  
for ambient lithium batteries, status of, 1
- Refrigeration  
solar, thermal losses in, 375
- Resistance  
battery internal, a new technique for determining, studies on Leclanché cells, 267
- Selenium  
photocatalytic behaviour of  $n\text{-MoSe}_2$  single crystals in contact with the  $\text{I}^-$ ,  $\text{I}_2$  redox couple in solar photoelectrochemical cells, 275
- Silicon  
aluminum-polycrystalline silicon solar cells, the influence of surface preparation on rectification in, 191
- Silver  
catalyst polarized in the region of negative potentials, an investigation of the oxygen cathode with a, 105
- Sodium  
beta-alumina electrolyte for use in sodium/sulphur batteries. Part 2. Manufacture and use, 45
- Solar cells  
aluminum-polycrystalline silicon, the influence of surface preparation on rectification in, 191  
photoelectrochemical, photocatalytic behaviour of  $n\text{-MoSe}_2$  single crystals in contact with the  $\text{I}^-$ ,  $\text{I}_2$  redox couple in, 275
- Solar refrigeration  
thermal losses in, 375
- Sulphur  
beta-alumina electrolyte for use in sodium/sulphur batteries. Part 2. Manufacture and use, 45
- Sulphur dioxide  
Li-SO<sub>2</sub> cells, energy conversion by spontaneously reacting, 365
- Temperature  
ambient, lithium batteries, status of rechargeable positive electrodes for, 1  
high, fuel and steam electrolysis cells using proton conductive solid electrolytes, 293
- Thermal losses  
in solar refrigeration, 375
- Thermoelectric e.m.f.  
of battery grade manganese dioxide, 95
- Thermopassivation  
of positive lead-acid battery electrodes, the influence of drying positive dry-charged, 201
- Tungsten carbide  
synthesis of highly active, preparation of the white tungstic acid modification and its use for the, 83
- Tungstic acid  
modification, preparation of the white, and its uses for the synthesis of highly active tungsten carbide, 83
- U.S.A.  
EV battery programme, 317
- Vanadium  
( $\text{Mo}_{0.3}\text{V}_{0.7}$ )<sub>2</sub>O<sub>5</sub> as a solid solution cathode for,  
Part I. Electrochemical behaviour of primary cells, 133  
Part II. Structural characteristics and secondary cells, 145
- Zinc  
life-testing of 1.7 kW h zinc-chloride battery system: cycles 1 - 1000, 121
