

SUBJECT INDEX

- Accelerated cycle life testing
 of lead-acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, 137
- Accumulator
 lead, negative plates, *in situ* conductance measurements of, 271
 lead-acid, influence of activating conditions on the thermopassivation of the dry-charged electrodes of the, 43
- Acetonitrile
 electrolytes, the cycling behaviour and stability of the lithium electrode in propylene carbonate and, 1
 propylene carbonate-
 electrolyte galvanostatic cycling of lithium-titanium disulphide cells in, 23
 LiAsF₆ in, for primary lithium batteries, 13
- Acid diffusion
 influence of, on the performance of lead-acid cells, 355
- Active mass
 effect of thickness of the, upon the corrosion rate of the spines of lead-acid battery plates, 291
- Aluminium
 SEI electrodes. Part VI: Calcium-Ca(AlCl₄)₂-sulfuryl chloride system, 125
- Anodes
 magnesium, in primary batteries, delayed action of,
 Part I. Experimental studies, 219
 Part II. Theoretical studies, 243
- Anodic passivation
 of lithium, 105
- Arsenic
 LiAsF₆ in propylene carbonate-acetonitrile for primary lithium batteries, 13
- Batteries
 application of non-aqueous solvents to,
 Part I. Physicochemical properties of propionitrile/water two-phase solvent relevant to zinc-bromine batteries, 309
 high temperature, with a solid sulphate electrolyte, 103
 lead-acid golf car, accelerated cycle life testing of, and the influence of separator type on battery life, energy consumption and operating cost, 137
 lithium, LiAsF₆ in propylene carbonate-acetonitrile for primary, 13
 magnesium anodes in primary, delayed action of,
 Part I. Experimental studies, 219
 Part II. Theoretical studies, 243
 zinc-bromine, physicochemical properties of propionitrile/water two-phase solvent relevant to, 309
- Battery electrode
 positive lead-acid, thermopassivation of,
 Part II. Influence of activating conditions on the thermopassivation of the dry-charged electrodes of the lead-acid accumulator, 43
- Battery life
 accelerated cycle life testing of lead-acid golf car batteries and the influence of separator type on, 137
- Battery plates
 lead-acid, effect of current density and thickness of the active mass upon the corrosion rate of the spines of, 291
- Bismuth
 AgBi(Cr₂O₇)₂ as a possible cathode for lithium cells, behaviour of, 63
- Calcium
 SEI electrodes. Part VI: Calcium-Ca(AlCl₄)₂-sulfuryl chloride system, 125
- Carbon
 electrode, oxygen-reducing porous, for electrochemical power sources with alkaline electrolytes, 333
- Cathode
 for lithium cells, behaviour of AgBi(Cr₂O₇)₂ as a possible, 63

- Cell(s)
 an escape from the, 307
 fuel, high-temperature solid oxide, technical status, 89
 lead-acid
 influence of acid diffusion on the performance of, 355
 on pulsed discharge, the influence of mass transport processes on the performance of, 53
 lithium
 AgBi(Cr₂O₇)₂ as a possible cathode for, behaviour of, 63
 galvanostatic cycling of vanadium oxide (V₆O₁₃) in a nonaqueous secondary, 33
 optimization of the vanadium oxide (V₆O₁₃) electrode in a nonaqueous secondary, 279
 Li/SOCl₂, investigation of positive electrode characteristics in high rate, 343
 lithium-titanium disulphide, in propylene carbonate and propylene carbonate-acetonitrile electrolytes, galvanostatic cycling of, 23
 sodium/sulphur multitube, design and performance of a, 263
 zinc-air, on the suppression of self discharge of the zinc electrodes of, and other related battery systems, 197
- Chromium
 AgBi(Cr₂O₇)₂ as a possible cathode for lithium cells, behaviour of, 63
- Computer-controlled
 multiple-channel system for electrochemical experiments, 149
- Conductance measurements
 of lead accumulator negative plates, *in situ*, 271
- Corrosion rate
 of the spines of lead-acid battery plates, effect of current density and thickness of the active mass upon the, 291
- Current density
 effect of, upon the corrosion rate of the spines of lead-acid battery plates, 291
- Cyanoacrylate coatings
 on lithium, a possible mechanism for the reduction of voltage delay in the Li/SOCl₂ system via, 179
- Cycling behaviour
 of the lithium electrode in propylene carbonate and acetonitrile electrolytes, 1
- Discharge performance
 structural effect of the zinc electrode on its, 167
- Electrical conductivity
 of the Li₂SO₄-Li₂CO₃ system, 191
- Electrical energy
 obtained from two solutions of different salinity, study of, inverse electro-dialysis, 203
- Electrochemical experiments
 computer-controlled multiple-channel system for, 149
- Electrochemical power sources
 oxygen-reducing porous carbon electrode for, with alkaline electrolytes, 333
- Electrochemical processes
 in a high power Li-SO₂ source, 377
- Electrochemical properties
 of tubular electrodes, effect of changes in engineering design on the distribution of reaction products and, 71
- Electrode(s)
 carbon, oxygen-reducing porous, for electrochemical power sources with alkaline electrolytes, 333
 lithium, in propylene carbonate and acetonitrile electrolytes, the cycling behaviour and stability of, 1
 lithium-lithium propionate, in propylene carbonate, study of a, 111
 positive, characteristics in high rate Li/SOCl₂ cells, investigation of, 343
 positive lead-acid battery, thermopassivation of, Part II. Influence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead-acid accumulator, 43
 solid electrolyte interphase (SEI). Part VI: Calcium-Ca(AlCl₄)₂-sulfuryl chloride system, 125
 tubular, effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of, 71
 vanadium oxide (V₆O₁₃), in a nonaqueous secondary lithium cell, optimization of the, 279
 zinc
 structural effect of the, on its discharge performance, 167

- of zinc-air cells and other related battery systems, on the suppression of self discharge of the, 197
- Electrodialysis
 - inverse, study of electrical energy obtained from two solutions of different salinity, 203
- Electrolyte(s)
 - acetonitrile, the cycling behaviour and stability of the lithium electrode in, 1
 - alkaline, oxygen-reducing porous carbon electrode for electrochemical power sources with, 333
 - propylene carbonate
 - the cycling behaviour and stability of the lithium electrode in, 1
 - galvanostatic cycling of lithium-titanium disulphide cells in, 23
 - propylene carbonate-acetonitrile, galvanostatic cycling of lithium-titanium disulphide cells in, 23
 - solid sulphate, high temperature batteries with a, 103
- Energy consumption
 - accelerated cycle life testing of lead-acid golf car batteries and the influence of separator type on, 137
- Engineering design
 - effect of changes in, on the distribution of reaction products and the electrochemical properties of tubular electrodes, 71
- Fluorine
 - LiAsF₆ in propylene carbonate-acetonitrile for primary lithium batteries, 13
- Fuel cell
 - high-temperature solid oxide, technical status, 89
- Galvanostatic cycling
 - of lithium-titanium disulphide cells in propylene carbonate and propylene carbonate-acetonitrile electrolytes, 23
 - of vanadium oxide (V₆O₁₃) in a non-aqueous secondary lithium cell, 33
- Golf car batteries
 - accelerated cycle life testing of lead-acid, and the influence of separator type on battery life, energy consumption and operating cost, 137
- High temperature
 - batteries with a solid sulphate electrolyte, 103
- solid oxide fuel cell, technical status, 89
- Inverse electro dialysis
 - study of electrical energy obtained from two solutions of different salinity, 203
- Lanthanum
 - LaNiO₃ in alkaline solution, reduction of oxygen on, 319
- Lead
 - accumulator negative plates, *in situ* conductance measurements of, 271
- Lead-acid
 - accumulator, influence of activating conditions on the thermopassivation of the dry-charged electrodes of the, 43
 - battery electrode, thermopassivation of the positive, Part II. Influence of activating conditions on the thermopassivation of the dry-charged electrodes of the lead-acid accumulator, 43
 - battery plates, effect of current density and thickness of the active mass upon the corrosion rate of the spines of, 291
 - cell on pulsed discharge, the influence of mass transport processes on the performance of, 53
 - cells, influence of acid diffusion on the performance of, 355
 - golf car batteries, accelerated cycle life testing of, and the influence of separator type on battery life, energy consumption and operating cost, 137
 - tubular positives, factors affecting the formation of, II. Resting and extreme conditions, 389
- Lithium
 - anodic passivation of, 105
 - batteries, LiAsF₆ in propylene carbonate-acetonitrile for primary, 13
 - cell(s)
 - AgBi(Cr₂O₇)₂ as a possible cathode for, behaviour of, 63
 - galvanostatic cycling of vanadium oxide (V₆O₁₃) in a nonaqueous secondary, 33
 - optimization of the vanadium oxide (V₆O₁₃) electrode in a nonaqueous secondary, 279

- cyanoacrylate coatings on, a possible mechanism for the reduction of voltage delay in the Li/SOCl₂ system via, 179
- electrical conductivity of the Li₂SO₄-Li₂CO₃ system, 191
- electrode in propylene carbonate and acetonitrile electrolytes, the cycling behaviour and stability of, 1
- LiAsF₆ in propylene carbonate-acetonitrile for primary lithium batteries, 13
- lithium propionate electrode in propylene carbonate, study of a, 111
- Li/SOCl₂ cells, investigation of positive electrode characteristics in high rate, 343
- titanium disulphide cells in propylene carbonate and propylene carbonate-acetonitrile electrolytes, galvanostatic cycling of, 23
- Lithium propionate
- lithium-, electrode in propylene carbonate, study of a, 111
- Li-SO₂ source
- electrochemical processes in a high power, 377
- Li/SOCl₂ system
- a possible mechanism for the reduction of voltage delay in the, via cyanoacrylate coatings on lithium, 179
- Li₂SO₄-Li₂CO₃ system
- electrical conductivity of the, 191
- Magnesium
- anodes in primary batteries, delayed action of,
- Part I. Experimental studies, 219
- Part II. Theoretical studies, 243
- Mass transport processes
- on the performance of the lead-acid cell on pulsed discharge, the influence of, 53
- Multitube cell
- sodium/sulphur, design and performance of a, 263
- Negative plates
- lead accumulator, *in situ* conductance measurements of, 271
- Nickel
- LaNiO₃ in alkaline solution, reduction of oxygen on, 319
- Non-aqueous solvents
- application of, to batteries, Part I. Physicochemical properties of propionitrile/water two-phase solvent relevant to zinc-bromine batteries, 309
- Oxygen
- reduction of, on LaNiO₃ in alkaline solution, 319
- Passivation
- anodic, of lithium, 105
- Physicochemical properties
- of propionitrile/water two-phase solvent relevant to zinc-bromine batteries, 309
- Propionitrile/water
- two-phase solvent relevant to zinc-bromine batteries, physicochemical properties of, 309
- Propylene carbonate
- acetonitrile, LiAsF₆ in, for primary lithium batteries, 13
- electrolytes, the cycling behaviour and stability of the lithium electrode in, 1
- lithium-lithium propionate electrode in, study of a, 111
- and propylene carbonate-acetonitrile electrolytes, galvanostatic cycling of lithium-titanium disulphide cells in, 23
- Pulsed discharge
- lead-acid cell on, influence of mass transport processes on the performance of the, 53
- Reduction
- of oxygen on LaNiO₃ in alkaline solution, 319
- Self discharge
- of the zinc electrodes of zinc-air cells and other related battery systems, on the suppression of, 197
- Separator type
- influence of, on battery life, energy consumption and operating cost, accelerated cycle life testing of lead-acid golf car batteries and the, 137
- Silver
- AgBi(Cr₂O₇)₂ as a possible cathode for lithium cells, behaviour of, 63
- Sodium
- /sulphur multitube cell, design and performance of a, 263

- Solid electrolyte interphase (SEI) electrodes. Part VI: Calcium-Ca(AlCl₄)₂-sulphuryl chloride system, 125
- Solid oxide fuel cell high-temperature, technical status, 89
- Stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, 1
- Structural effect of the zinc electrode on its discharge performance, 167
- Sulphuryl chloride SEI electrodes. Part VI: Calcium-Ca(AlCl₄)₂-sulphuryl chloride system, 125
- Sulphate electrolyte, high temperature batteries with a solid, 103
- Sulphur electrochemical processes in a high power Li-SO₂ source, 377
- Li/SOCl₂ cells, investigation of positive electrode characteristics in high rate, 343
- sodium/, multitube cell, design and performance of a, 263
- Thermopassivation of the positive lead-acid battery electrode. Part II. Influence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead-acid accumulator, 43
- Titanium disulphide lithium-, cells in propylene carbonate and propylene carbonate-acetonitrile electrolytes, galvanostatic cycling of, 23
- Tubular electrodes effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of, 71
- Tubular positives lead/acid, factors affecting the formation of, II. Resting and extreme conditions, 389
- Vanadium oxide (V₆O₁₃) electrode in a nonaqueous secondary lithium cell, optimization of the, 279
- galvanostatic cycling of, in a nonaqueous secondary lithium cell, 33
- Voltage delay in the Li/SOCl₂ system, a possible mechanism for the reduction of, via cyanoacrylate coatings on lithium, 179
- Zinc -bromine batteries, physicochemical properties of propionitrile/water two-phase solvent relevant to, 309
- electrode structural effect of the, on its discharge performance, 167
- of zinc-air cells and other related battery systems, on the suppression of self discharge of the, 197
- Zinc-air cells on the suppression of self discharge of the zinc electrodes of, and other related battery systems, 197
