

SUBJECT INDEX

- Acid electrolytes
catalysts for the electrochemical reduction of oxygen in, heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as, 217
- Air gas-diffusion electrodes
comparative methods for the estimation of the activity and the transport hindrances of, 181
- Amalgamation
effects of surface condition and, on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, 297
- Anodic passivation
of lithium in electrolytes for Li/SO₂ cells at low temperatures, 327
- Battery(ies)
lead-acid,
cycle life of stressed, 93
life-cycling test data, lifetime prediction by pattern recognition, 23
primary oxide, quantitative X-ray diffraction analysis of α -PbO/ β -PbO in, 171
traction, effects of electrolyte agitation on the performance of, at various temperatures, 137
lithium-aluminum/iron sulfide, magnesia porous particle separators for, 235
lithium secondary, dialkoxyethane-propylene carbonate mixed electrolytes for, 261
- Battery lifetime
prediction by pattern recognition, application to lead-acid battery life-cycling test data, 23
- Cadmium
nickel-, cell residual charge analyser, 75
photoelectrochemical studies on polycrystalline CdS (chemical bath deposition) and CdSe (chemical bath and electro deposition) thin film electrodes, 159
- Carbon carriers
heat-treated Co-tetramethoxyphenylporphyrin on different, as catalysts for the electrochemical reduction of oxygen in acid electrolytes, 217
- Catalysts
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as, for the electrochemical reduction of oxygen in acid electrolytes, 217
- Cell(s)
lead-acid, with immobilized electrolyte, limitations in the design of, 39
lithium, low temperature studies on rechargeable, 319
Li/SO₂, anodic passivation of lithium in electrolytes for, at low temperatures, 327
Li/SOCl₂, reaction products on current or potential reversal in, 287
nickel-cadmium, residual charge analyser, 75
solid state, self-discharge in, 115
- CdS/Cu₂S heterojunctions
electrochemical method for improving the spectral response of, 85
- Cooling plant
solar, first results of a real apparatus, 197
- Corrosion
and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, comparative study of effects of surface condition and amalgamation on, 297
- Co-tetramethoxyphenylporphyrin
heat-treated, on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, 217
- Current or potential reversal
in Li/SOCl₂ cells, reaction products on, 287

- Cycle life
of stressed lead-acid batteries, 93
- Deposition
chemical bath and electro, photo-electrochemical studies on polycrystalline CdS and CdSe thin film electrodes, 159
- Dialkoxyethane
-propylene carbonate mixed electrolytes for lithium secondary batteries, 261
- Discharge performance
of the Ti/Fe redox flow system, a study of the, 65
- Electrical conductivity
of a new solid electrolyte glass material $\text{Li}_2\text{O}-\text{LiNbO}_3-\text{B}_2\text{O}_3$, 151
- Electrochemical intercalation
of fluorides into pyrographite, 1
- Electrochemical investigations
on the kinetics of the growth of PbO_2 layers on lead, 101
- Electrochemical method
for improving the spectral response of CdS/Cu₂S heterojunctions, 85
- Electrochemical reduction
of oxygen in acid electrolytes, heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for, 217
- Electrode(s)
air gas-diffusion, comparative methods for the estimation of the activity and the transport hindrances of, 181
plastic-bonded nickel oxide, ESCA investigations on, 123
platinized carbon, high-performance, for oxygen reduction in power sources with alkaline electrolytes, 273
polycrystalline CdS and CdSe thin film, photoelectrochemical studies on, 159
rechargeable alkaline zinc, experimental survey of, 9
- Electrode study
a rotating-ring-disc, of impurity effects of lead corrosion in sulphuric acid, 55
- Electrodeposited $\alpha\text{-PbO}_2$ and $\beta\text{-PbO}_2$
in sulfuric acid, recharge, cycling and morphology, 223
- Electrolyte(s)
catalysts for the electrochemical reduction of oxygen in acid, heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as, 217
dialkoxyethane-propylene carbonate mixed, for lithium secondary batteries, 261
lead-acid cells with immobilized, limitations in the design of, 39
Leclanché related, effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in, 297
for Li/SO_2 cells at low temperatures, anodic passivation of lithium in, 327
power sources with alkaline, high-performance platinized carbon electrodes for oxygen reduction in, 273
- Electrolyte agitation
on the performance of lead-acid traction batteries, effects of, at various temperatures, 137
- Electrolyte glass material
 $\text{Li}_2\text{O}-\text{LiNbO}_3-\text{B}_2\text{O}_3$, electrical conductivity of a new solid, 151
- ESCA investigations
on plastic-bonded nickel oxide electrodes, 123
- Fluorides
electrochemical intercalation of, into pyrographite, 1
- Heterojunctions
CdS/Cu₂S, electrochemical method for improving the spectral response of, 85
- Impurity effects
on lead corrosion in sulphuric acid, a rotating-ring-disc electrode study of, 55
- Intercalation
electrochemical, of fluorides into pyrographite, 1
- Iron
a study of the discharge performance of the Ti/Fe redox flow system, 65

Iron sulfide

- lithium-aluminum/, batteries, magnesia porous particle separators for, 235

Lead

- electrodeposited α -PbO₂ and β -PbO₂ in sulfuric acid: recharge, cycling and morphology, 223
- growth of PbO₂ layers on lead, electrochemical investigations on the kinetics of the, 101

Lead-acid batteries

- cycle life of stressed, 93
- life-cycling test data, battery lifetime prediction by pattern recognition, 23
- primary oxide, quantitative X-ray diffraction analysis of α -PbO/ β -PbO in, 171

Lead-acid cells

- with immobilized electrolyte, limitations in the design of, 39

Lead-acid traction batteries

- effect of electrolyte agitation on the performance of, at various temperatures, 137

Lead corrosion

- in sulphuric acid, a rotating-ring-disc electrode study of impurity effects on, 55

Lithium

- aluminum/iron sulfide batteries, magnesia porous particle separators for, 235
- anodic passivation of, in electrolytes for Li/SO₂ cells at low temperatures, 327
- electrical conductivity of a new solid electrolyte glass material Li₂O-LiNbO₃-B₂O₃, 151
- Li/SOCl₂ cells, reaction products on current or potential reversal in, 287
- secondary batteries, dialkoxyethane-propylene carbonate mixed electrolytes for, 261

Lithium cells

- low temperature studies on rechargeable, 319

Magnesia

- porous particle separators for lithium-aluminum/iron sulfide batteries, 235

Nickel

- cadmium cell, residual charge analyzer, 75

Nickel oxide

- electrodes, ESCA investigations on plastic-bonded, 123

Oxygen reduction

- in power sources with alkaline electrolytes, high-performance platinumized carbon electrodes for, 273

Photoelectrochemical studies

- on polycrystalline CdS (chemical bath deposition) and CdSe (chemical bath and electro deposition) thin film electrodes, 159

Platinized carbon electrodes

- high-performance, for oxygen reduction in power sources with alkaline electrolytes, 273

Power sources

- with alkaline electrolytes, high-performance platinumized carbon electrodes for oxygen reduction in, 273

Primary oxide

- lead-acid battery, quantitative X-ray diffraction analysis of α -PbO/ β -PbO in, 171

Propylene carbonate

- dialkoxyethane-, mixed electrolytes for lithium secondary batteries, 261

Pyrographite

- electrochemical intercalation of, fluorides into, 1

Redox flow system

- Ti/Fe, a study of the discharge performance, 65

- Rotating-ring-disc electrode study of impurity effects on lead corrosion in sulphuric acid, 55

Selenium

- photoelectrochemical studies on polycrystalline CdS (chemical bath deposition) and CdSe (chemical bath and electro deposition) thin film electrodes, 159

Separators

- magnesia porous particle, for lithium-aluminum/iron sulfide batteries, 235

- Solar collector
 - with an absorbent surface in the form of a venetian blind, 245
- Solar cooling plant
 - first results of a real apparatus, 197
- Solid state cells
 - self-discharge in, 115
- Spectral response
 - of CdS/Cu₂S heterojunctions, electrochemical method for improving the, 85
- Surface condition
 - effects of, on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, 297
- Temperatures
 - anodic passivation of lithium in electrolytes for Li/SO₂ cells at low, 327
 - effects of electrolyte agitation on the performance of lead-acid traction batteries at various, 137
 - low, studies on rechargeable lithium cells, 319
- Titanium
 - a study of the discharge performance of the Ti/Fe redox flow system, 65
- Transport hindrances
 - of air gas-diffusion electrodes, comparative methods for the estimation of the activity and, 181
- Venetian blind
 - solar collector with an absorbent surface in the form of a, 245
- X-ray diffraction analysis
 - of α -PbO/ β -PbO in lead-acid battery primary oxide, 171
- Zinc
 - comparative study of effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, 297
- Zinc electrodes
 - rechargeable alkaline, experimental survey of, 9
