

SUBJECT INDEX

- Acid fuel cells
oxygen-reducing electrodes for, 201
- Alloy
performance of lithium alloy/lithium and calcium/lithium anodes in thionyl chloride cells, 239
- Anode film resistance
in Mg-MnO₂ dry cells, electrochemical determination of, 27
- Barton oxides
X-ray diffraction analysis of, 77
- Batteries
lead-acid
plain separator for, simple but informative experiments on, 157
study of preparation variables of tubular positive electrodes for, 45
lithium/lithium vanadium oxide
secondary, evaluation of factors affecting performance of test cells, 13
nickel-cadmium, in space, design and application of, 119
- Battery chemical
manganese dioxide, a review of, chemical syntheses and X-ray diffraction studies, 209
- Bismuth oxide
as an additive in pasted zinc electrodes, 169
- Cadmium
nickel-cadmium batteries in space, design and application of, 119
- Calcium
/lithium anodes in thionyl chloride cells, performance of, 239
- Cathode(s)
CuO, in lithium cells, influence of decomposition conditions of Cu(OH)₂ on properties of CuO, 101
silver chromate, silver molybdate, and silver tungstate, in molten nitrate electrolytes, high rate discharge characteristics of, 141
- Cell(s)
acid fuel, oxygen-reducing electrodes for, 201
lithium, CuO cathode in, influence of decomposition conditions of Cu(OH)₂ on properties of CuO, 101
lithium organic, storage capabilities of, using lithium perchlorate-ether solutions as electrolyte, 191
magnesium-manganese dioxide dry, electrochemical determination of anode film resistance and double layer capacitance in, 27
molten salt electrochemical, primary and secondary room temperature, 109
redox flow, applications, study of V(II)/V(III) redox couple for, 179
thionyl chloride, performance of lithium alloy/lithium and calcium/lithium anodes in, 239
- Chemical syntheses
of manganese dioxides, a review of a battery chemical, 209
- Copper
CuO cathode in lithium cells, influence of decomposition conditions of Cu(OH)₂ on properties of CuO, 101
- Cycling behaviour
of plain and polymer-bonded porous zinc electrodes in KOH solutions, 261
- Decomposition conditions
influence of, on Cu(OH)₂ on properties of CuO cathode in lithium cells, 101
- Discharge characteristics
of silver chromate, silver molybdate, and silver tungstate cathodes in molten nitrate electrolytes, 141
- Double layer capacitance
in Mg-MnO₂ dry cells, electrochemical determination of, 27
- Electrochemical cells
primary and secondary room temperature molten salt, 109
- Electrochemical determination
of anode film resistance and double layer capacitance in Mg-MnO₂ dry cells, 27

Electrochemistry

- of porous zinc, plain and polymer-bonded electrodes in KOH solutions
 - cycling behaviour, 261
 - Faradaic impedance, 61
 - polarisation behaviour, 245

Electrodes

- oxygen-reducing, for acid fuel cells, 201
- Teflon-bonded porous zinc rotating-disk study on, 93
- tubular positive, for lead/acid batteries, study of preparation variables of, 45
- zinc
 - bismuth oxide as an additive in pasted, 169
 - plain and polymer-bonded porous, in KOH solutions
 - cycling behaviour, 261
 - Faradaic impedance, 61
 - polarisation behaviour, 245

Electrolyte(s)

- lithium perchlorate-ether solutions as, storage capabilities of lithium organic cells using, 191
- molten nitrate, high rate discharge characteristics of silver chromate, silver molybdate and silver tungstate cathodes in, 141

Faradaic impedance

- of plain and polymer-bonded porous zinc electrodes in KOH solutions, 61

Lead-acid batteries

- plain separator for, simple but informative experiments on, 157
- tubular positive electrodes for, study of preparation variables of, 45

Lithium

- anodes in thionyl chloride cells, performance of lithium alloy/lithium and calcium/lithium, 239
- /lithium vanadium oxide secondary batteries, evaluation of factors affecting performance of test cells, 13
- storage capabilities of lithium organic cells using lithium perchlorate-ether solutions as electrolyte, 191

Lithium cells

- CuO cathode in, influence of decomposition conditions of $\text{Cu}(\text{OH})_2$ on properties of CuO, 101

Magnesium

- manganese dioxide dry cells, electrochemical determination of anode film resistance and double layer capacitance in, 27

Manganese dioxide

- chemical syntheses and X-ray diffraction studies of, 209
- Mg-MnO₂ dry cells, electrochemical determination of anode film resistance and double layer capacitance in, 27

Molten salt electrochemical cells

- primary and secondary room temperature, 109

Nickel

- cadmium batteries in space, design and application of, 119

Nitrate electrolytes

- high rate discharge characteristics of silver chromate, silver molybdate, and silver tungstate cathodes in molten, 141

Oxygen-reducing electrodes

- for acid fuel cells, 201

Photovoltaic refrigerator

- comparison of the performance obtained in a tropical country, of a solid-adsorption, solar-driven refrigerator, and a, 1

Polarisation behaviour

- of plain and polymer-bonded porous zinc electrodes in KOH solutions, 245

Redox couple

- study of V(II)/V(III), for redox flow cell applications, 179

Redox flow cell

- study of V(II)/V(III) redox couple for, applications, 179

Refrigerator

- comparison of the performance obtained in a tropical country of, a solid adsorption, solar-driven refrigerator, and a photovoltaic refrigerator, 1

Rotating-disk study

- on Teflon-bonded porous zinc electrodes, 93

Separator

for lead-acid batteries, simple but informative experiments on a plain, 157

Silver

chromate, molybdate, and tungstate cathodes in molten nitrate electrolytes, high rate discharge characteristics of, 141

Solar-driven refrigerator

comparison of performance obtained in tropical country, of a solid adsorption, and a photovoltaic refrigerator, 1

Space

batteries in, design and application of nickel-cadmium, 119

Teflon-bonded

porous zinc electrodes, rotating-disk study on, 93

Thionyl chloride cells

performance of lithium alloy/lithium and calcium/lithium anodes in, 239

Vanadium

lithium/lithium vanadium oxide secondary batteries, evaluation of factors affecting performance of test cells, 13

X-ray diffraction analysis

of Barton oxides, 77

X-ray diffraction studies

of manganese dioxides, a review of a battery chemical, 209

Zinc

electrochemistry of porous, plain and polymer-bonded electrodes in KOH solutions

cycling behaviour, 261

Faradaic impedance, 61

polarisation behaviour, 245

electrodes

bismuth oxide as an additive in pasted, 169

rotating-disk study on Teflon-bonded porous, 93
