

Publisher's note

We are delighted to be able to inform you about an important development for the benefit of authors and readers of *Journal of Power Sources*.

Journal of Power Sources is included in a new initiative from Elsevier: 'Colourful e-Products'. The first issue of the journal to appear following this new workflow will be volume 124, issue number 2. This issue will contain a number of colour and black & white illustrations. Some of the figures that appear in black & white in the printed version of this issue of the journal will be IN COLOUR, online, in ScienceDirect.

This 'colourful e-products' solution provides a welcome step forward now that scientists increasingly access information on line. Scientists in many disciplines need to be able to publish their work in colour, but the cost of colour printing in small, specialised journals can be prohibitive and we realise that not all scientists have appropriate funds to cover the charges.

Authors wishing to make use of this facility should ensure that the artwork is in an acceptable format (TIFF, EPS or MS Office files) and at the correct resolution. In addition, for colour online and black & white in print, both colour and black & white artwork (file and/or hardcopy) is provided.

There is *no extra charge* for authors who participate in this new initiative. Further information on electronic artwork can be found at <http://authors.elsevier.com/artwork>. Any queries concerning colourful e-products may be directed to Elsevier Author Support authorsupport@elsevier.com.

To view the articles online please access the journal from the ScienceDirect website: <http://www.sciencedirect.com>.

Your feedback and comments are welcome. Contact Louise Morris l.morris@elsevier.com.
