Journal of Power Sources 142 (2005) ix

www.elsevier.com/locate/jpowsour

Publisher's note

Elsevier is committed to migrating its journal publication process to a fully electronic workflow. The underlying motivations are to improve author and reviewer services, and to react to what is becoming a common trend and expectation in the market. This development implies that all the editorial, production and distribution processes will operate electronically.

We are, therefore, pleased to announce that *Journal of Power Sources* has implemented a system for electronic handling of research papers during the submission and peer review process.

This Elsevier Editorial System (EES) is a web-based system with full online submission, review and status update capabilities. We invite all authors and reviewers to use the Elsevier Editorial System when submitting papers to *Journal of Power Sources*. The Journal Home Page, <http://www.elsevier.com/locate/jpowsour>, contains all details of the Elsevier Editorial System, including its Guide for Authors for manuscript submissions.

As a service to our authors and reviewers, we have pre-registered on the Elsevier Editorial System site, all recent authors and reviewers for whom we hold an email address. In this case you will have recently received an email informing you about your username and password which you need to access the Elsevier Editorial System.

The Elsevier Editorial System can be accessed at: <http://ees.elsevier.com/power>

We welcome your feedback the Elsevier Editorial System and value your continuing contributions to *Journal of Power Sources* as an author and as a reviewer.
