

## Erratum

Volume **29**, Number 3 (1979), in the article, "*In Situ* Studies of Electrode Reactions: The Mechanism of Lithium Intercalation in  $\text{TiS}_2$ ," by R. R. Chianelli, J. C. Scanlon, and B. M. L. Rao, pp. 323-337:

The quality of the color figures in this article, Figs. 2 and 5, was unfortunately impaired. Therefore, for the reader's convenience, these figures are repeated on the following pages.

FIG. 2. Cracking in TiS<sub>2</sub> crystal; 45° illumination. Magnification approximately 250×. One inch is approximately 100 μm.

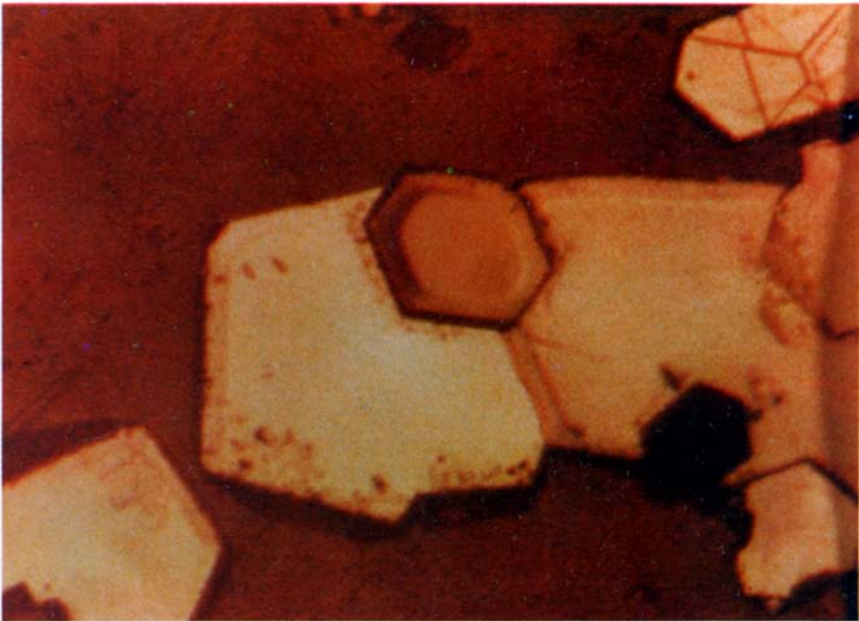

FIG. 5. Lithiation of perfect  $\text{TiS}_2$  crystal, showing front between  $\text{Li}_{1-x}\text{TiS}_2$  and  $\text{TiS}_2$ .
