### Regular Articles

**Ionothermal synthesis of the mixed-anion material, Ba<sub>3</sub>Cl<sub>4</sub>CO<sub>3</sub>**  
Patricia Leyva-Bailen, Paz Vaquero and Anthony V. Powell  
Page 2333

Ionothermal synthesis has provided single crystals of the mixed-anion material barium chloride carbonate, enabling the first determination of the complex crystal structure of this phase to be performed.

### Regular Articles—Continued

**Phases in the Al–Yb–Zn system between 25 and 50 at% ytterbium**  
Donata Mazzone, Pietro Manfrinetti and Maria L. Fornasini  
Page 2344

In the pseudobinary section YbZn<sub>2-x</sub>Al<sub>x</sub> four structures occur in sequence on increasing the aluminium content: CeCu<sub>2</sub> (or KHg<sub>2</sub>), MgZn<sub>2</sub>, MgNi<sub>2</sub> and MgCu<sub>2</sub>. Volumes per atom vs. composition are reported in the figure.

**Unique charge ordering of manganese in a new mixed valent phosphate K<sub>3</sub>Mn<sup>II</sup>Mn<sup>III</sup>(PO<sub>4</sub>)(H<sub>0.5</sub>PO<sub>4</sub>)<sub>2</sub>(HPO<sub>4</sub>)<sub>2</sub>**  
L. Adam, A. Guesdon and B. Raveau  
Page 2338

The three-dimensional intersecting tunnels structure of K<sub>3</sub>Mn<sup>II</sup>Mn<sup>III</sup>(PO<sub>4</sub>)(H<sub>0.5</sub>PO<sub>4</sub>)<sub>2</sub>(HPO<sub>4</sub>)<sub>2</sub> presents original [Mn<sub>4</sub>O<sub>16</sub>]<sub>∞</sub> chains in which “Mn<sup>II</sup><sub>3</sub>O<sub>12</sub>” trimeric units alternate with Mn<sup>III</sup>O<sub>6</sub> octahedra.

**Synthesis and anion exchange properties of a Zn/Ni double hydroxide salt with a guarinoite structure**  
F. Delorme, A. Seron, M. Licheron, E. Veron, F. Giovannelli, C. Beny, V. Jean-Prost and D. Martineau  
Page 2350

SEM micrograph (secondary electrons) of the synthesized Zn/Ni guarinoite showing that aggregates are composed of small plate-like particles.

## Nuclear magnetic resonance study of Li and H diffusion in the high-temperature solid phase of $\text{LiBH}_4$

A.V. Soloninin, A.V. Skripov, A.L. Buzlukov and A.P. Stepanov

Page 2357

The measured spin–lattice relaxation rates of  $^1\text{H}$  (a),  $^7\text{Li}$  (b) and  $^{11}\text{B}$  (c) as functions of the inverse temperature for the high-temperature solid phase of  $\text{LiBH}_4$ . The curves show the simultaneous Bloembergen–Purcell–Pound fits to the data with the fixed parameters of Li diffusion (the pre-exponential factor  $\tau_0 = 1.1 \times 10^{-15}$  s and the activation energy  $E_a = 0.56$  eV). This plot indicates that all the relaxation data for different nuclei and at different resonance frequencies are governed by a single Li jump process.

## Liquid phase deposition synthesis of hexagonal molybdenum trioxide thin films

Shigehito Deki, Alexis Bienvenu Béléké, Yuki Kotani and Minoru Mizuhata

Page 2362

SEM photograph of typical  $\text{h-MoO}_3 \cdot n\text{H}_2\text{O}$  thin film nuclei obtained after 36 h at  $40^\circ\text{C}$  by the LPD method.

## Strontium–copper selenite–chlorides: Synthesis and structural investigation

Peter S. Berdonosov, Andrei V. Olenov and Valery A. Dolgikh

Page 2368

$\text{Sr}_2\text{Cu}(\text{SeO}_3)_2\text{Cl}_2$  and  $\text{SrCu}_2(\text{SeO}_3)_2\text{Cl}_2$  were obtained and characterized by X-ray diffraction technique, DTA and IR spectroscopy.

## The magnetic structure of clinopyroxene-type $\text{LiFeGe}_2\text{O}_6$ and revised data on multiferroic $\text{LiFeSi}_2\text{O}_6$

Günther J. Redhammer, Georg Roth, Werner Treutmann, Markus Hoelzel, Werner Paulus, Gilles André, Clemens Pietzonka and Georg Amthauer

Page 2374

Section of the nuclear and magnetic structure of the synthetic clinopyroxene-type compound  $\text{LiFeGe}_2\text{O}_6$  displaying the antiferromagnetic coupling of spins within the chains of  $\text{Fe}^{3+}\text{O}_6$  octahedra and the antiferromagnetic (via  $\text{GeB}$  sites) and ferromagnetic (via  $\text{GeA}$  sites) coupling between these chains.

## In situ X-ray diffraction study of reduction processes of $\text{Fe}_3\text{O}_4$ - and $\text{Fe}_{1-x}\text{O}$ -based ammonia-synthesis catalysts

Yi-Fan Zheng, Hua-Zhang Liu, Zong-Jian Liu and Xiao-Nian Li

Page 2385

A proposed growth model of active phase  $\alpha\text{-Fe}$  during reduction. Due to  $\text{H}_2$  diffusing easily into the pores, reduction starts on outside and inside surface simultaneously to form “microcrystalline film”, and the particles shrink during reduction which results in breaking of the aggregated oxide particle.

## Organic carboxylate anions effect on the structures of a series of Mn(II) complexes based on 2-phenylimidazo [4,5-f][1,10-phenanthroline] ligand

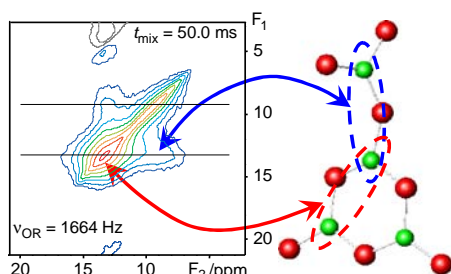

Xiuli Wang, Yongqiang Chen, Guocheng Liu, Hongyan Lin and Jinxia Zhang

Page 2392

Through selecting organic carboxylate anions, six  $\text{Mn}(\text{II})$  complexes have been synthesized under hydrothermal conditions and characterized by single crystal X-ray diffraction.

**Determination of the bond-angle distribution in vitreous  $B_2O_3$  by  $^{11}B$  double rotation (DOR) NMR spectroscopy**  
 I. Hung, A.P. Howes, B.G. Parkinson, T. Anupöld, A. Samoson, S.P. Brown, P.F. Harrison, D. Holland and R. Dupree  
 Page 2402

Connectivities and B–O–B bond angle distributions of ring and non-ring boron atoms in  $v\text{-}B_2O_3$  have been determined by  $^{11}B$  double rotation (DOR) NMR, multiple-quantum (MQ) DOR NMR and spin-diffusion DOR. Near-perfect planar, hexagonal  $[B_3O_6]$  boroxol rings are shown to be present.

**Reinvestigation of the Fe-rich part of the pseudo-binary system  $SrO\text{-}Fe_2O_3$**   
 N. Langhof, D. Seifert, M. Göbbels and J. Töpfer  
 Page 2409

Part of the  $SrO\text{-}Fe_2O_3$  phase diagram in air.

**$EuTZn$  ( $T = Pd, Pt, Au$ ) with  $TiNiSi$ -type structure—Magnetic properties and  $^{151}Eu$  Mössbauer spectroscopy**  
 Trinath Mishra, Wilfried Hermes, Thomas Harmening, Matthias Eul and Rainer Pöttgen  
 Page 2417

Europium coordination in  $EuPdZn$ ,  $EuPtZn$ , and  $EuAuZn$ .

**Influence of the Mg-content on the cation distribution in cubic  $Mg_xFe_{3-x}O_4$  nanoparticles**  
 F. Nakagomi, S.W. da Silva, V.K. Garg, A.C. Oliveira, P.C. Morais and A. Franco Jr.  
 Page 2423

Raman spectra of  $Mg_xFe_{3-x}O_4$  samples ( $x = 0.5, 1.0, \text{ and } 1.5$ ) using the  $Ar^+$  514.5 nm laser line.

**Structure–composition sensitivity in “Metallic” Zintl phases: A study of  $Eu(Ga_{1-x}Tt_x)_2$  ( $Tt = Si, Ge, 0 \leq x \leq 1$ )**  
 Tae-Soo You, Jing-Tai Zhao, Rainer Pöttgen, Walter Schnelle, Ulrich Burkhardt, Yuri Grin and Gordon J. Miller  
 Page 2430

A study of  $Eu(Ga_{1-x}Si_x)_2$  and  $Eu(Ga_{1-x}Ge_x)_2$  shows different compositional ranges for puckering of  $6^3$  nets and, for the germanides, two new commensurately modulated superstructures.

**Synthesis, crystal structure, spectroscopic and thermal properties of  $[Et_4N][Ta_6Br_{12}(H_2O)_6]Br_4 \cdot 4H_2O$  ( $Et = \text{ethyl}$ )—A new compound with the paramagnetic  $[Ta_6Br_{12}]^{3+}$  cluster core**  
 Berislav Perić, Dražan Jozić, Pavica Planinić, Nevenka Brničević and Gerald Giester  
 Page 2443

Two interpenetrating (pseudo)diamond nets formed by packing of the paramagnetic  $[Ta_6Br_{12}(H_2O)_6]^{3+}$  (octahedral) and diamagnetic  $[Et_4N]^+$  (spheres) cations.

**On the crystal structures of  $Ln_3MO_7$  ( $Ln = Nd, Sm, Y$  and  $M = Sb, Ta$ )—Rietveld refinement using X-ray powder diffraction data**

W.T. Fu and D.J.W. IJdo

Page 2451

(a) A projected view of  $Ln_3MO_7$  along the  $a$ -axis showing the ordering of  $Ln$  and  $M$  cations in the fluorite lattice. Note that the unit cells of the fluorite (dashed line), the parent  $Cmmm$  (dashed line) and the  $Cmcm/Cmcm$  structures (continuous line) are indicated. (b) Schematic representations of the crystal structures of  $Y_3SbO_7$  showing  $SbO_6$  octahedra and  $Y$ . Oxygens that do not bond to  $M$  cations are also shown.

**Structure, crystal chemistry and thermal evolution of the  $\delta$ - $Bi_2O_3$ -related phase  $Bi_9ReO_{17}$**

Neeraj Sharma, Ray L. Withers, Kevin S. Knight and Chris D. Ling

Page 2468

The crystal structure of  $Bi_9ReO_{17}$  viewed along the  $[101]$  direction.  $Bi$  atoms and bonds are light gray,  $O$  atoms and bonds are black and  $ReO_4$  are represented by gray tetrahedra.

**Preparation of iron oxides using ammonium iron citrate precursor: Thin films and nanoparticles**

Sangmoon Park

Page 2456

Both iron-oxide thin films and nanoparticles (about 4 nm diameter) are successfully achieved via successive-ionic-layer-adsorption-and-reaction and hydrothermal techniques in the use of ammonium iron citrate as a precursor.

**General and facile synthesis of ceria-based solid solution nanocrystals and their catalytic properties**

Huan-Ping Zhou, Rui Si, Wei-Guo Song and Chun-Hua Yan

Page 2475

Uniform ultra-small nanostructured  $Ce_{1-x}Zr_xO_2$ ,  $Ce_{1-x}Gd_xO_{1-x/2}$ ,  $Ce_{1-x}Sm_xO_{1-x/2}$ , and  $Ce_{1-x}Sn_xO_2$  solid solutions with homogeneous textures were synthesized through a thermolysis process, facilitated by the initial formation of precursors (hydrated (Ce,M)-hydroxides).

**$PbMn(SO_4)_2$ : A new chiral antiferromagnet**

D.V. West, I.D. Posen, Q. Huang, H.W. Zandbergen, T.M. McQueen and R.J. Cava

Page 2461

$PbMn(SO_4)_2$  crystallizes with chiral symmetry, forming a double-helical arrangement of  $Pb^{2+}$  and  $Mn^{2+}$  cations. It orders antiferromagnetically at 5.5 K and shows signs of magnetic frustration.

**Fabrication of a graphene-cuprous oxide composite**

Chao Xu, Xin Wang, Lichun Yang and Yuping Wu

Page 2486

The graphene oxide sheets are reduced and almost exfoliated due to the in-situ formation of  $Cu_2O$  crystals deriving from the adsorbed copper acetate.

**Synthesis, structure and magnetic behavior of a new three-dimensional Manganese phosphite-oxalate:**

$[\text{C}_2\text{N}_2\text{H}_{10}][\text{Mn}_2^{\text{II}}(\text{OH}_2)_2(\text{HPO}_3)_2(\text{C}_2\text{O}_4)]$   
 Padmini Ramaswamy, Sukhendu Mandal and Srinivasan Natarajan  
 Page 2491

A new antiferromagnetic three-dimensional inorganic-organic hybrid compound,  $[\text{C}_2\text{N}_2\text{H}_{10}][\text{Mn}_2^{\text{II}}(\text{OH}_2)_2(\text{HPO}_3)_2(\text{C}_2\text{O}_4)]$  has been prepared hydrothermally. The compound has neutral manganese layers pillared by oxalate units. The neutral manganese layers are shown here.

**The ternary system cerium-palladium-silicon**

Alexey Lipatov, Alexander Gribanov, Andriy Grytsiv, Peter Rogl, Elena Murashova, Yurii Seropegin, Gerald Giester and Konstantin Kalmykov  
 Page 2497

Phase relations in the ternary system Ce-Pd-Si have been established for the isothermal section at 800 °C based on X-ray powder diffraction, metallography, SEM and EMPA techniques on about 130 alloys. 18 ternary compounds were observed.

**Uniform  $\text{AMoO}_4:\text{Ln}$  ( $A = \text{Sr}^{2+}, \text{Ba}^{2+}$ ;  $\text{Ln} = \text{Eu}^{3+}, \text{Tb}^{3+}$ ) submicron particles: Solvothermal synthesis and luminescent properties**

Piaoping Yang, Chunxia Li, Wenxin Wang, Zewei Quan, Shili Gai and Jun Lin  
 Page 2510

Uniform rare-earth ions ( $\text{Eu}^{3+}, \text{Tb}^{3+}$ ) doped  $\text{AMoO}_4$  ( $A = \text{Sr}, \text{Ba}$ ) submicron phosphors with tetragonal scheelite-type structure have been prepared through a facile solvothermal process using EG as reaction media.

**Preparation and photocatalytic ability of highly defective carbon nanotubes**

Yongsong Luo, Yaofu Heng, Xiaojun Dai, Wenquan Chen and Jialin Li  
 Page 2521

The highly defective carbon nanotubes (CNTs) were prepared using a heat-treatment technique. The results showed that the highly defective CNTs had the photocatalytic ability in the range of visible light.

**Magnetic properties of  $\text{Co}_2\text{V}_2\text{O}_7$  single crystals grown by flux method**

Zhangzhen He, Jun-Ichi Yamaura, Yutaka Ueda and Wendan Cheng  
 Page 2526

Single crystals of  $\text{Co}_2\text{V}_2\text{O}_7$  are grown using  $\text{V}_2\text{O}_5$  as self-flux at a slow cooling rate. Magnetic properties are investigated by means of susceptibility, magnetization, and heat capacity measurements, showing that  $\text{Co}_2\text{V}_2\text{O}_7$  is likely to be a three-dimensional antiferromagnet with two magnetic transitions at low temperature.

**Synthesis of sulfated titania supported on mesoporous silica using direct impregnation and its application in esterification of acetic acid and n-butanol**

Yuhong Wang, Yunting Gan, Roger Whiting and Guanzhong Lu  
 Page 2530

XRD profiles of the composites of S- $\text{TiO}_2/\text{MCM-41}$  with different  $\text{TiO}_2$  contents. The low angle peaks indicate the MCM-41-like structure retained and a  $\text{TiO}_2$  phase appeared at high angle region.

### Pressure-induced structural transformations of the Zintl phase sodium silicide

Raúl Quesada Cabrera, Ashkan Salamat, Oleg I. Barkalov, Olivier Leynaud, Peter Hutchins, Dominik Daisenberger, Denis Machon, Andrea Sella, Dewi W. Lewis and Paul F. McMillan

Page 2535

The high-pressure behaviour of NaSi has been studied using Raman spectroscopy and angle-dispersive synchrotron X-ray diffraction. Our studies reveal a first structural transformation occurring at 8–10 GPa, followed by irreversible amorphisation, suggesting the formation of Si–Si bonds with oxidation of the Si<sup>-</sup> species and reduction of Na<sup>+</sup> to metallic sodium. We have combined our experimental studies with DFT calculations to assist in the analysis of the structural behaviour of NaSi at high pressure.

### Soft ferromagnet GdFe<sub>7.7</sub>Si<sub>1.3</sub> with a CaCu<sub>5</sub>-to-Th<sub>2</sub>(Ni/Zn)<sub>17</sub> transitional structure

Volodymyr Svitlyk, Yan Yin Janice Cheung and Yuriy Mozharivskyj

Page 2543

The basic structure of the soft ferromagnet GdFe<sub>7.7</sub>Si<sub>1.3</sub> is derived from that of CaCu<sub>5</sub> through random substitution of Gd atoms by Fe<sub>2</sub> dumbbells.

### Neutron diffraction study of the β' and γ phases of LiFeO<sub>2</sub>

Maud Barré and Michele Catti

Page 2549

Crystal structure of β'-LiFeO<sub>2</sub> (monoclinic C2/c). Lithium and iron atoms are both ordered (blue and yellow balls) and partially disordered (green balls) over four independent sites. The β' phase transforms to fully ordered γ (tetragonal I4<sub>1</sub>/amd) at 550 °C.

### Solvent-dependent luminescent Cu(I) framework based on 5-(4-pyridyl)tetrazole

Fei Wang, Rongmin Yu, Qi-Sheng Zhang, Zhen-Guo Zhao, Xiao-Yuan Wu, Yi-Ming Xie, Li Qin, Shan-Ci Chen and Can-Zhong Lu

Page 2555

A new Cu(I) compound, Cu<sub>4</sub>(L)<sub>4</sub>·2EtOH (1) (L = 5-(4-pyridyl)tetrazole), was synthesized under solvothermal method, which displays an interesting solvent-dependent luminescence.

### Pulsed laser-induced oxygen deficiency at TiO<sub>2</sub> surface: Anomalous structure and electrical transport properties

Tomohiko Nakajima, Tetsuo Tsuchiya and Toshiya Kumagai

Page 2560

A pulsed laser-irradiated TiO<sub>2-δ</sub> substrate showed an unconventional metallic phase, with hysteresis over a wide range of temperatures and a metal–insulator transition at 42 K.

### Effect of added zinc on the properties of cobalt-containing ceramic pigments prepared from layered double hydroxides

M.E. Pérez-Bernal, R.J. Ruano-Casero and V. Rives

Page 2566

Mixed oxides from layered double hydroxides (LDHs) with the hydrotalcite-type structure containing Co and Al or Zn, Co and Al in the brucite-like layers are potential candidates for ceramic pigments with tunable colour properties.

### Effects of Mn substitution on the structure and properties of chalcopyrite-type $\text{CuInSe}_2$

Jinlei Yao, Carly N. Kline, Hao Gu, Mi Yan and Jennifer A. Aitken

Page 2579

The manganese solid solubility can reach up to 10% and 20% for  $\text{CuIn}_{1-y}\text{Mn}_y\text{Se}_2$  and  $\text{Cu}_{1-y}\text{In}_{1-y}\text{Mn}_2\text{Se}_2$ , respectively, while maintaining phase-pure, chalcopyrite-type materials. Lattice parameters increase linearly with increase manganese concentration suggesting that the manganese ions are distributed randomly on both the indium site and the copper and indium sites simultaneously.

### $\text{RbAuUSe}_3$ , $\text{CsAuUSe}_3$ , $\text{RbAuUTe}_3$ , and $\text{CsAuUTe}_3$ : Syntheses and structure; magnetic properties of $\text{RbAuUSe}_3$

Daniel E. Bugaris and James A. Ibers

Page 2587

View down [100] of the crystal structure of the isostructural  $\text{AAuUQ}_3$  ( $A=\text{Rb, Cs}$ ;  $Q=\text{Se, Te}$ ) compounds.

#### Author inquiries

For inquiries relating to the submission of articles (including electronic submission where available) please visit this journal's homepage at <http://www.elsevier.com/locate/jssc>. You can track accepted articles at <http://www.elsevier.com/trackarticle> and set up e-mail alerts to inform you of when an article's status has changed. Also accessible from here is information on copyright, frequently asked questions and more. Contact details for questions arising after acceptance of an article, especially those relating to proofs, will be provided by the publisher.
