The members of the applied electrochemistry group within the GDCh meet annually for an active exchange of information and opinions in a conference combining lectures and posters, providing ample space for active discussion. Every other year, this meeting is combined with a general meeting of the GDCh, including all branches of chemistry. Thus the scope of possible interactions becomes

even broader. The meeting in 2005 took place at Heinrich–Heine-Universität, Düsseldorf, from September 11 to 14, 2005. Authors of lectures and contributions were invited to provide full papers for inclusion in a special issue of the *Journal of Solid State Electrochemistry*. Following the keywords “Electrochemistry—dynamics by interdisciplinarity,” topics ranging from fundamental aspects to applied subjects at the interfaces between electrochemistry, biology, catalysis, materials science, and nanoscience (and numerous others) were presented. This volume presents some selected examples. The guest editor acknowledges the patience of all contributing authors.
