Dynamics of the Open BCS Model

Emmanuel Buffet¹ and Philippe A. Martin¹

Received November 3 1978

The attention of the reader is drawn to several misprints which may obscure the understanding of our paper⁽¹⁾:

Page 599, line 15 should read: "We assume that the decay in time of $C_1(t)$ and $C_2(t)$ is $O(1/t^{1+\eta})$, $\eta > 0$, for $t \rightarrow \infty$."

Page 599, the argument of the first C_2 function occurring on the right-hand side of formula (47) should be $-t$ (and not $+t$).

Page 611, Figs. 2a and 2b should be interchanged.

Page 611, the last line of Section 4.2 should read

$$\hat{C} \equiv 1, \quad \epsilon = 1, \quad \mu = 4 \quad (\text{which gives } \beta_C = 0.549)$$
