

Future Contributions to *Journal of Statistical Physics*

This special issue contains the Proceedings of the Conference on Frontiers of Quantum Monte Carlo, held September 3–6, 1985, at the Los Alamos National Laboratory, Los Alamos, New Mexico. Guest editor: James E. Gubernatis.

ARTICLES

Preface

James E. Gubernatis

PART 1. COMPUTERS AND SCIENCE

Scientific Uses of the MANIAC

H. L. Anderson

Mathematics and Computing

Peter D. Lax

PART 2. QUANTUM MONTE CARLO

Simulations: A Tool for Studying Quantum Condensed Matter Systems

D. J. Scalapino

Progress and Bottlenecks in Simulating Lattice Gauge Theory with Fermions

John B. Kogut

PART 3. CONDENSED MATTER PHYSICS

Treatment of the Schrödinger Equation Through a Monte Carlo Method Based upon the Generalized Feynman–Kac Formula

Michel Caffarel and Pierre Claverie

Quantum Monte Carlo Studies of Electron–Electron Interaction Effects in Conducting Polymers

D. K. Campbell, T. A. DeGrand, and S. Mazumdar

The Statistical Error of Green's Function Monte Carlo

D. M. Ceperley

New Results on Trotter-like Approximations

R. M. Fye

The Determinant Method and Quantum Simulations of Many-Body Effects in a Single Impurity Anderson Model

J. E. Gubernatis, T. C. Olsen, D. J. Scalapino, and R. L. Sugar

Simulations of the Hubbard Model

J. E. Hirsch

Melting of the Two-Dimensional Wigner Crystal in the Quantum Region

M. Imada

Stochastic Simulation of Fermions

H. R. Jauslin and T. Schneider

Monte Carlo Molecular Dynamics Simulations for Two-Dimensional Magnets

C. Kawabata, M. Takeuchi, and A. R. Bishop

Quantum Monte Carlo of Coupled Fermion Chains

David S. Kung

A Monte Carlo Method for Quantum Spins Using Boson World Lines

E. Loh, Jr.

Mapping of Stochastic Dynamics onto Associated Quantum Models and $(d + 1)$ -Dimensional Classical and Static Systems

Toni Schneider

A New Approach to Quantum Spin Systems: The Critical Properties of a Heisenberg Ferromagnet

Lincoln Stoller

Quantum Statistical Monte Carlo Methods and Applications to Spin Systems

Masuo Suzuki

Path Integral Monte Carlo Methods: Static- and Time-Correlation Functions

Bruce J. Berne

PART 4. CHEMISTRY

Fourier Path-Integral Methods: A Model Study of Simple Fluids

D. L. Freeman, R. D. Coalson, and H. D. Doll

G. N. Lewis' Atom and Quantum Monte Carlo Studies of Liquids

R. W. Hall and P. G. Wolynes

Quantum Simulations of Aqueous Systems

Peter J. Rossky, Jurgen Schnitker, and Robert A. Kuharski

Study of Electron Solvation in Polar Solvents Using Path Integral Calculations

M. Sprik, R. W. Impey, and M. L. Klein

Path-Integral Monte Carlo Simulations of Electron Localization in Water Clusters

D. Thirumalai, A. Wallqvist, and B. J. Berne

PART 5. ATOMIC MOLECULAR AND NUCLEAR PHYSICS

Auxiliary-Field Monte Carlo Methods

Stevin Koonin

Monte Carlo Studies of Nuclear Many-Particle Systems

J. W. Negele

Molecular Physics and Chemistry Applications of Quantum Monte Carlo

P. J. Reynolds, R. N. Barnett, B. L. Hammond, and W. A. Lester, Jr.

Monte Carlo Calculations of Atoms and Molecules

K. E. Schmidt and J. W. Moskowitz

PART 6. HIGH-ENERGY PHYSICS

Testing Two Versions of Lattice Gauge Theory: Creutz Ratios in $U(1)_3$

Kevin Cahill and Randolph Reeder

Lattice Gauge Theory with a Fast Highly Parallel Computer

N. H. Christ

Langevin Simulations of Lattice Field Theories Using Fourier Accelerations

C. Davies, G. Batrouni, S. Camahort, G. Katz, A. Kronfeld, P. Lepage, P. Rossi, B. Svetitsky, and K. Wilson

QCD from Chippewa Falls

Philippe de Forcrand

Improved Monte Carlo Renormalization Group Method

Rajan Gupta, K. G. Wilson, and C. Umrigar

The β -Function, Scaling, and Improved Action for $SU(3)$ Lattice Gauge Theory

Rajan Gupta, G. Guralnik, and A. Patel

The Deconfining Phase Transition in Lattice Quantum Chromodynamics

S. A. Gottlieb, J. Kuti, D. Toussaint, A. D. Kennedy, S. Meyer, B. J. Pendleton, and R. L. Sugar

Large-Scale Calculations for Hadron Spectroscopy

Claudio Rebbi

Lattice QCD: Going Beyond the Nuss Spectrum

Stephen R. Sharpe

Monte Carlo Studies with the ST-100 Array Processor

R. L. Sugar

PART 7. ADVANCED COMPUTER DESIGNS

GF 11

J. Beitem, M. Denneau, and D. Weingarten

Advanced Large-Scale and High-Speed Multiprocessor System for Scientific Applications CRAY X-MP-4 Series

Steve S. Chen

Monte Carlo Physics on a Concurrent Processor

G. C. Fox, S. W. Otto, and E. A. Umland

List of Participants
