

Future Contributions to *Journal of Statistical Physics*

ARTICLES

Foreword

Lui Lam

Pinning and Long-Time-Scale Behavior in Traveling-Wave Convection

Daniel R. Ohlsen, S. Y. Yamamoto, C. M. Surko, and Paul Kolodner

The Effect of a Coriolis Force on Taylor–Couette Flow

Richard J. Wiener, Philip W. Hammer, Charles E. Swanson, David C. Samuels, and Russell J. Donnelly

Novel States in Taylor–Couette Flow Subjected to a Coriolis Force

Li Ning, Guenther Ahlers, and David S. Cannell

Dispersive Chaos

James A. Glazier, Paul Kolodner, and Hugh Williams

Regimes of Oscillation in a Linear Array of Vortices

H. Willaime, O. Cardoso, and P. Tabeling

Temporal Forcing of Wave Patterns

D. Walgraef

Localized Bifurcations and Defect Instabilities in the Convection of a Nematic Liquid Crystal

A. Joets and R. Ribotta

Interaction and Dynamics of Defects in Convective Roll Patterns of Anisotropic Fluids

Eberhard Bodenschatz, Andreas Weber, and Lorenz Kramer

The Measurement of Subcritical Electroconvection

I. Rehberg, F. Hörner, and G. Hartung

Patterns at the Onset of Electroconvection in Freely Suspended Smectic Films

Stephen W. Morris, John R. de Bruyn, and A. D. May

The Role of Defects in the Transition between Different Symmetries in Convective Patterns

S. Ciliberto, E. Pampaloni, and C. Perez-Garcia

Basic Considerations in Flowing Electrorheological Fluids

James E. Stangroom

Characteristics and Mechanisms of Electrorheological Fluids

Hans Conrad and Arnold F. Sprecher

Structure and Dynamics of a Dense Dipolar System in an Electric Field
and Their Relevance to Electrorheological Fluids

N. K. Jaggi

A Prepared Pattern with Wavelength Selection in Directional Solidification

P. E. Cladis

Fluctuating Hydrodynamics and Principal Oscillation Pattern Analysis

Alejandro García and Cécile Penland

Lattice Gas Automata for Simple and Complex Fluids

S. Chen, G. D. Doolen, and W. H. Matthaeus
