

## **Future Contributions to *Journal of Statistical Physics***

### *ARTICLES*

#### Preface

*Lesser Blum and Joel L. Lebowitz*

#### Janco's Disciples in Coulombland: Parts I and II

*A. Alastuey and F. Cornu*

#### Stability and Instability of Relativistic Electrons in Classical Electromagnetic Fields

*Elliott H. Lieb, Heinz Siedentop, and Jan Philip Solovej*

#### Coulomb System Equivalent to the Energy Spectrum of the Calogero–Sutherland–Moser (CSM) Model

*Ph. Choquard*

#### Correlations for Parameter-Dependent Random Matrices

*P. J. Forrester and T. Nagao*

#### Progressive Construction of an “Olympic” Gel

*E. Raphaël, C. Gay, and P. G. de Gennes*

#### Universal Fluctuations in the Support of the Random Walk

*F. van Wijland and H. J. Hilhorst*

#### Shock Profiles for the Partially Asymmetric Simple Exclusion Process in One Dimension

*B. Derrida, J. L. Lebowitz, and E. R. Speer*

#### Finite-Dimensional Representations of a Shock Algebra

*Eugene R. Speer*

#### The Spin-One Ising Model in the Mean-Spherical Approximation

*J. S. Høye and G. Stell*

#### Variational Extension of the Mean Spherical Approximation to Arbitrary Dimensions

*Esof S. Velázquez, Lesser Blum, and Harry L. Frisch*

#### A Self-Consistent Ornstein–Zernike Approximation for the Site-Diluted Ising Model

*E. Kierlik, M. L. Rosinberg, and G. Tarjus*

- Second-Order Percus–Yevick Theory for a Confined Hard-Sphere Fluid  
*Douglas Henderson, Stefan Sokolowski, and Darsh Wasan*
- Nonuniform Classical Fluid Mixture in One-Dimensional Space with Next Neighbor Interactions  
*J. K. Percus*
- Interfacial Width and Shape Fluctuations and Extensions of the Gaussian Model of Capillary Waves  
*A. Robledo and C. Varea*
- Onsager Molecules for the Yukawa Potentials: Screening Potentials and the Jancovici Coefficient in Strongly Coupled Electron-Screened Plasmas  
*Yaakov Rosenfeld and Gilles Chabrier*
- The Becker–Döring Equations at Large Times and Their Connection with the LSW Theory of Coarsening  
*O. Penrose*
- Friction Tensor for a Pair of Brownian Particles: Spurious Finite-Size Effects and Molecular Dynamics Estimates  
*Lydéric Bocquet, Jean-Pierre Hansen, and Jaroslav Piasecki*
- A Nonequilibrium Approach for Random Amphiphilic Copolymer Model  
*E. G. Timoshenko, Yu. A. Kuznetsov, and K. A. Dawson*
- Steady State in Two-Dimensional Diffusion-Controlled Reactions  
*C. A. Condat, G. J. Sibona, and C. E. Budde*
- Transport of Ions and Solvent in Confined Media  
*Albert Lehmani, Olivier Bernard, and Pierre Turq*
- A Particle Method with Adjustable Transport Properties—The Generalized Consistent Boltzmann Algorithm  
*Alejandro L. Garcia, Francis J. Alexander, and Berni J. Alder*
- Multipole Ewald Sums for the Fast Multipole Method  
*K. E. Schmidt and Michael A. Lee*
- Model Fermion Monte Carlo with Correlated Pairs. II  
*M. H. Kalos and K. E. Schmidt*
- “Optimal” Bounds on the Ground-State Energy of  $N$ -body Systems of Bosons and Fermions Interacting by Attractive Forces  
*André Martin*
- Vibrations of Simple Fractal-Based Models  
*John C. Kimball and Harry L. Frisch*
- Econophysics: Scaling and Its Breakdown in Finance  
*Rosario N. Mantegna and H. Eugene Stanley*
