

### Publisher's Note

The Publisher is happy to announce that Professor Bob Holdsworth has agreed to become an editor for the Journal of Structural Geology.

Professor Bob Holdsworth is currently Chair in Earth Sciences at the University of Durham where he leads the Reactivation Research Group and is a Director of its associated commercial spin-out company, Geospatial Research Ltd. His research interests have a strong field-work-based flavour and are focused upon topics related to basement reactivation, weak faults, oblique tectonics (transpression, transtension) and, most recently, digital geological mapping. Professor Holdsworth has worked in

many parts of the world, from frozen Arctic wastes to hot Amazonian jungles, but he has an enduring interest in the geology of NW Scotland, an area that he considers to be one of the finest natural laboratories anywhere in the world.

Professor Holdsworth has in the mean time started working on the journal. I am confident that his work will be of great value to the journal and wish him success in carrying out his editorial duties.
