Joints predating and postdating lamprophyre intrusion. Photograph Cees Passchier, Mainz (cpasschi@uni-mainz.de). © Cees Passchier.

Lower Permian leucogranite intruded by a Permian lamprophyre dyke. The dyke partly follows and offsets a joint surface in the granite which must therefore have been present before its intrusion. Other, more irregular joints crosscut granite and dyke and impinge on the older joint.

Aiguablava, Catalonia, Spain. Width of view 1 m. Location 3.2190 E, 41.9354 N.
