EDITORIAL NOTE

Sulfur Reports proudly presents its first special issue, on chiral N-substituted sulfur compounds, with guest editor Stephen S. Pyne as the helmsman. There can be no doubt that the cutting-edge preparative chemistry contained in these three distinguished presentations from three continents will benefit in its impact on our readership from considerable synergistic effects identified and honed to perfection by our guest editor.

Further special issues are in the pipeline and will be selected and edited to the same demanding standards as the present one.
